CONTENTS

MARCH 2016

▶ LAYOUTS

22 BATH (GREEN PARK)

David Butcher shares the behind-the-scenes story of Taunton Model Railway Group's exceptional, award-winning layout based on the Somerset & Dorset's famous northern terminus.

44 SOMERSET & DORSET: A JOURNEY BY LAYOUTS

Few railways can claim to have been as so extensively copied in model form as the S&D. **Andy York** takes us on a modelling journey from Bath to Bournemouth.

66 BURNHAM-ON-SEA

Although best-known for its main line over the Mendips, the S&D's first ambition was to reach the Bristol Channel, as **Andy York** finds out.

72 BLANDFORD FORUM

Andy York visits an award-winning layout built to give museum visitors a sense of how this Dorset town looked before its railway closed.

▶ PRACTICAL BRM

32 ENHANCE YOUR FREE KIT

Phil Parker continues his simple and cost-effective enhancements of the free BRM card kit, this month adding interior furnishings and décor.

34 MAKE A STATION CANOPY

Canopies once adorned many stations, providing much-needed shelter. **Phil Parker** wanted to build one for 'Ruston Quays'.

42 INSTALL ACCESSORY DECODER ADAPTORS

Nigel Burkin discovers a solution for operating slow-action point motors from conventional DCC accessory decoders.

50 DECODING DCC PART 2: FITTING A SPEAKER

On a quest to settle the myths of 'going digital', **Howard Smith** continues his series for beginners as he installs decoder ancillaries.

82 A WAGON IN EVERY SCALE -

Phil Parker assembles an LNER 13t 'High' kit in 3mm scale.

84 CREATE A FROSTY SCENE

Howard Smith modifies a diorama to capture the essence of a cold winter frost using a minimum of modelling products.

▶ NEWS & REVIEWS

87 GOODS INWARDS

Our all-new news and reviews sections brings you the best coverage of the latest products from the UK model railway trade.

96 FIRST REVIEW: HELJAN O2

Ben Jones takes an exclusive first look at the Danish firm's new OO model of this Nigel Gresley-designed heavy goods 2-8-0.

101 POPPY'S CHASSIS JIG

Tony Wright investigates a new laser-cut chassis jig for locomotive builders.

102 REVIEWS

A 3-D printed Class 128 railcar and Graham Farish 'Pipe' wagons in N, plus a OO gauge Class 24 from a new supplier.

▶ INTERVIEW

54 JERRY CLIFFORD

Andy York talks to the well-known 2mm Finescale modeller and S&D devotee about how he got interested in the line and his 'project of a lifetime'.

▶ REGULARS

60 SERVICE HISTORY: LNER O2

With several batches built over a 25-year period, Nigel Gresley's heavy mineral machines have a complicated history. **Tony Wright** explains the differences and modifications made over the years. See p96 for a review of the Heljan model.

104 DIARY DATES

All the exhibition dates and events in your area over the next few weeks.

145 TRACKPLAN ARCHIVE

This unique new section gives you the chance to build up a library of trackplans and layout ideas. All this month's plans are inspired by locations and aspects of the Somerset & Dorset.

153 NEXT MONTH

Find out what exciting features we've got planned for the Spring 2016 issue of BRM.

154 TAIL LAMP

BRM's 'Industry Insider' considers the reaction to a recent new RTR model release and wonders if some modellers should look closer to home for solutions to their running problems.

WORLD OF RAILWAYS

Your new online home for four quality railway magazines and three leading model railway exhibitions!

Cobalt Alpha

By DCCconcepts

Alpha-Power is a top quality Power supply for use with ALL DCC systems and it is also perfect for the Accessory power bus.

Alpha-Power has fast-acting overload protection that will instantly turn power off in the case of significant overload, giving you both audible and visible indication of overload or wiring problems and a reset is simple - Just turn the power switch off and on again.

Properly regulated for consistent results it will deliver a stable 18v DC at 5 amps irrespective of your local mains power levels.

CE and FCC approved and usable with mains voltages from 100 to 240v AC, Alpha Power is suitable for use in most parts of the world.

The natural partner for Alpha-Box, Alpha-Power has both DC output plug and screw terminal connections, so it is also an ideal choice for most DCC systems as well as DC users needing more power.

Initially conceived as a way to bring the magic of Cobalt Alpha to ALL modellers, DC or DCC, Alpha-box really IS something special. In fact we think that Alpha-Box is the best power booster available!

We really wanted maximum cross-brand versatility so Alpha-box is very versatile ...and as a result it is perhaps best described as the "Swiss Army Knife" of DCC power boosters because it offers so much more than ANY other power booster you can buy anywhere.

Alpha-Box has inputs at track power and command bus level plus a powerful 5 amp output that's well protected by fast acting short circuit overload protection. As a result it is the perfect upgrade for ALL brands of DCC start set from Bachmann EZ command to other train -set DCC controllers as well as those from more specialised brands.

NCE users really love it. Power Cab and Power Pro plug straight in, becoming fully "Cobalt Alpha" compatible systems with the addition of 3 amps of very clean track power. Other brand users really like it too... and "interface adapters" are available where needed!

Cobalt Alpha products are DCC compliant & are care the ground up to make wiring of your control panels reduce wiring between control panel and layout to a

The Cobalt α Alpha range and all other DCCconcepts products are distributed world-wide by DCCconcepts products are distributed in the United Kingdom by Gaugemaster Controls Ltd.,

It just does NOT get any easier than this!

Cobalt α Alpha Central is literally a complete and ready-to-use digital control panel for 12 points...in a box!

It's so simple instructions could read "Unpack-Plug in-Change points"

Alpha Central can be connected directly to any model NCE system - however the other brands are not forgotten. Alpha central will work well with any DCC system at all if used in combination with the very clever Alpha-Box, with the combination adding 5A of clean power AND full digital accessory control to the most basic of starter sets. With Alpha-Box it improves the power & performance of basic systems such as Prodigy & Prodigy Express. They also add the luxury of almost wire-free manual control-panel operation to systems from EZ Command to Z21 or ECoS.

Multiple Alpha-Central units can be linked together to control up to 2000+ Accessories and addressing your Accessory decoders becomes incredibly simple once you have installed Cobalt Alpha in ANY of its forms as your DCC control interface.

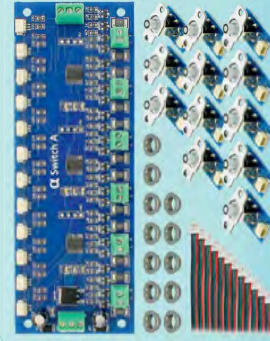

Alpha α

The very Heart of Alpha. Cobalt Alpha interprets commands from ANY momentary switch & turns them into a digital signal.

Cobalt Alpha allows you to connect ANY form of switch from "Stud and Probe" to a simple push-button. Alpha is of course also ideally suited for Cobalt-S Levers and the sophisticated, "Easy-to-connect" Alpha-Switch-D shown below.

No matter what choice you make for your switches, the wiring is greatly simplified and reduced as Alpha will digitise all of the switch commands, meaning that nothing needs long direct wiring. Because of this your ENTIRE Control panel can then need as little as ONE cable to connect it to the layout.

For quality "Mimic" panels without soldering and no complex wiring if any kind, we recommend that you take a look at Cobalt Alpha and Alpha-Switch-D. It really IS as easy as using LEGO!

Alpha-Switch-D

Cobalt Alpha-Switch-D is a sophisticated but super-easy to install switching system for Mimic panel control of DCC Accessories.

Usable on its own with Accessory decoders that have added switch connections or just combined with Cobalt Alpha itself, it is the SIMPLEST form of Accessory switch wiring you'll find anywhere.

Each switch includes its own indicator LED and connects simply and directly to the control PCB.

Wiring a panel takes no time at all and it really IS as simple as assembling Lego! Full instructions are supplied - we even show you a simple way to create a top quality control panel for them!

The little things really CAN make a big difference!

A 6-wire curly Cord is often supplied with the appropriate Cobalt Alpha models.

This 6-wire cord is also available as a separate item of course. (The part number is DCC-ACL).

NCE / Roco users will love it as it can easily replace inconvenient flat cables that are supplied with those DCC system brands as it is much more convenient to use.

fully designed from very simple. Using single cable.

WELCOME

What is it that draws people to particular railways, even those they never experienced first hand? This month we mark the 50th anniversary of the closure of the Somerset & Dorset Joint Railway. It's a railway that still fires the imaginations of enthusiasts and modellers, writers, photographers and preservationists; but why the S&D and not, for example, the M&GN or Cheshire Lines Committee?

Some reasons we know for certain; the countryside through which it ran, idyllic stations with evocative names straight out of a Thomas Hardy novel and the rose-tinted memories of summer Saturday holiday trains. Combining ex-LMS, SR and GWR locomotives, homegrown designs, plus a smattering of BR Standards, and rolling stock from all of the 'Big Four' companies, it offers opportunities that few other railway can match. Add to that the fact that it was never 'tainted' by modernisation or the dreaded diesels (not my words!) and you can start to see why so many still hold it in such high regard.

But there's more to it than that. As I hope you'll gather from the various articles in this issue, it was also the people that made it special. Built through the heart of GWR territory, the S&D had a sense of independence, even after being absorbed into the WR. A sense of community and pride comes through strongly in all the material published about it.

It could be argued that the line's closure in March 1966 guaranteed its cherished status. The mythology and mystique surrounding the S&D has grown in the decades since. Like movie stars and musicians taken from us too soon - Marilyn Monroe, James Dean, Jim Morrison and many others - the S&D will never have its appeal diminished by age or scandal - or in this case, modernisation and rationalisation.

Perhaps if it had stayed open as a basic single-track route with bus shelters replacing the stations and Class 153s, it would be no more notable today than the ex-GWR route to Weymouth with which it once competed.

As it is, the S&D is one of a select group of lost railways - the 'Waverley' and Woodhead routes being two others - that provide endless inspiration for modellers and enough 'what ifs' to fuel many more years of argument about whether their closures were justified. What cannot be argued though, is that it must have been a wonderful spectacle in its post-war summer Saturday heyday. Yet another reason to get working on that time machine! We hope you enjoy the issue, and look forward to seeing you in Doncaster Racecourse on February 13/14.

OO SCALE "FORDHAMPTON" PLASTIC KITS

Fordhampton is a bustling market town on a busy mainline running through the rolling South Downs. With both local and express services steaming through, Fordhampton Station serves all kinds of trains from commuters travelling to and from London as well as excursions to the seaside at Brighton! Wherever you are going the station master will be happy to help you get to your destination.

GM401 Fordhampton Station £25.50

GM402 Fordhampton Signal Box £10.50

GM403 Fordhampton Footbridge £17.50

GM404 Fordhampton Level Crossing £11.50

GM405 Fordhampton 60s Estate House £15.95

GM406 Fordhampton Locomotive Shed £19.95

GM407 Fordhampton Carriage Platforms £9.95

GM408 Fordhampton Village Store or Pub £17.95

Look out for more additions to Fordhampton as and when planning permission is granted!

Card modelling: A hobby in itself from Metcalfe...

If you have never tried card modelling, you will be surprised at how technical it is. Metcalfe prides itself on creating models which are a pleasurable challenge to build. Each kit, once complete, is sturdy and realistic. With detailed step-by-step instructions, you'll find it easy to

construct each kit with precision. Once you start, you are sure to become hooked.

Shown below is the inside of the PO238 Wayside Station kit with the many layers and inner components that make our kit one of the sturdiest on the market.

BATH (GREEN PARK)

David Butcher shares the behind-the-scenes story of Taunton Model Railway Group's exceptional, award-winning layout based on the Somerset & Dorset's famous northern terminus.

The award-winning Bath (Green Park) model was created by members of the Taunton Model Railway Group. It is built to finescale 16.5mm OO gauge. It came about after TMRG decided in 1997 that a major project was required to complement our existing 'Tamerig Central' layout (to be featured in **BRM** later this year). By then it was already over a quarter of a century old, operating over four running tracks on a circular layout, to which we have since added two further tracks which act as return loops for 'BGP'.

'Tamerig' still runs well after four decades of constant use, but is now beginning to show its age with an increasing need for 'TLC'. Although built to be portable it became necessary to alter it to a fixed layout a decade ago after many years of exhibition visits. Hence the wish for another model to keep us active on the exhibition circuit. TMRG members wanted a worthwhile challenge - this aspiration has been more than met!

Unusually for a modelling group in the West Country, we had a weaker GWR interest, with stronger support for the LMS, LNER and SR. So, how to satisfy this? After much verbal indigestion a divine inspiration focused onto the jointly operated Midland and Somerset & Dorset Joint Railway station in Bath. It met our interests and became a real challenge! To summarise, it offered a double/single track junction, two goods yards, two locomotive sheds sharing a single turntable, siding loops, and a famous two-platform, four-track terminus with a magnificent overall train shed. We could operate stock from all four post-1923 main line railway groups, plus the earlier designs of BR stock.

The three main groupings mentioned above featured strongly through coaching stock, predominantly

RIGHT: Busy times at Bath Green Park shed as locomotives are prepared for their next assault on the Mendip hills.

We try to portray a working sequence to showcase a variety of typical traffic. To operate a direct copy of an original timetable would be difficult, and would be boring for the average visitor.

ex-LMS and SR motive power, supported by limited appearances from ex-GWR and LNER types. Yes, LNER power did make it to Bath, we have recorded evidence to prove it!

As a terminal station with prototype potential for all four pre-BR company interests made Green Park unique, we believe. Other locations, such as Kensington Olympia and Oxford, offered through station workings, but created problems in locating such a layout in our clubroom if authentic operation was to be achieved. Thus, our first two key constraints could be satisfied - realistic operation and a terminus with the four main line railways represented.

HIGH STANDARDS

We planned for the highest practicable standards of construction; our aspiration was to create something by which others would judge us, which has the paradoxical effect of creating a third constraint - that second best would not do. The project gave scope for all members to become involved. The full-size railway was long gone, and, of great significance, had never been modernised. It retained many pre-1923 features until closure in 1966.

By great good fortune, the train shed structure and original buildings have survived virtually intact though. The project needed considerable research before physical construction began in 1999. Track

ABOVE: The layout's signature feature is the outstanding train shed roof, soldered together from thousands of brass components.

RIGHT: A BR Standard 4MT heads along the single track scenic section with a stopping train formed of Hornby Maunsell stock.

and building plans and many photographs were kindly loaned by many people for close examination.

Even now, fresh information still continues to appear. The model may never be finally completed - 98% is built, and fully working, but the final oddments remain a challenge! The backscenes required detailed research and attract much attention, especially from people who know the area. This includes a select few who have recognised their properties - a very satisfying outcome to our endeavours! We have not built any item not confirmed by photographs, and hence why a final few items remain to be constructed.

TRADITIONAL INFRASTRUCTURE

We chose to portray the BR era. Not all the features modelled existed together - it proved impossible to obtain a full record of a particular point in time. But, all existed in our chosen timespan, with most for the full period, but railway infrastructure is always changing and Green Park did likewise. Fortunately for us, it was only in minor respects, for example some upper quadrant signals replacing the old Midland lower quadrant design, and alterations to the shed facilities.

The original Victorian station masterpiece was built by the Midland Railway whose legacy of infrastructure and working practices survived long after its demise in 1922 through the run-down by BR from 1960 onwards and

Our Bishops Lydeard clubroom opens to display 'Tamerig Central' and 'BGP' during West Somerset Railway gala events. We also welcome private group visits, by prior arrangement.

ABOVE: A fine collection of BR road vehicles ready to make local deliveries.

eventual closure by the Western Region in March 1966.

Until 1962, the busy train service and variety of traffic handled was out of all proportion to the limited operating facilities. The S&D was a self-contained system operated almost entirely by its own staff, with minimal incursions by staff from other depots. It had a true 'family' atmosphere with everyone understanding how to work and manage it. The minimal infrastructure survived a

5

Western Region review, due largely to the enormous cost required to modernise the line.

This became another key feature of our model - the S&D did not require a plethora of lineside equipment such as was more normal on lines elsewhere, particularly in respect of signal provision. By the late-1950s it was rare, if not by then unique, for working distant signals to still be used into a terminal station. These were retained (against the wishes of the WR management) to facilitate traffic movement.

We believe we have captured the essential ambience and atmosphere of the location - a key aspiration of our group in deciding to re-create the route between Green Park station and Bath Junction in miniature.

The main model is fully portable but unusual in having a 'home' version for the clubroom and an 'away' version for exhibition display.

At home the layout connects into 'Tamerig Central' to avoid the need for a separate fiddleyard. The 'away' version has an extensive loop transit yard to allow out-and-home operations from/to the station with no intermediate handling or reversal of stock.

Four baseboards comprise the station, goods yard and locomotive sheds, common to both the 'home' and

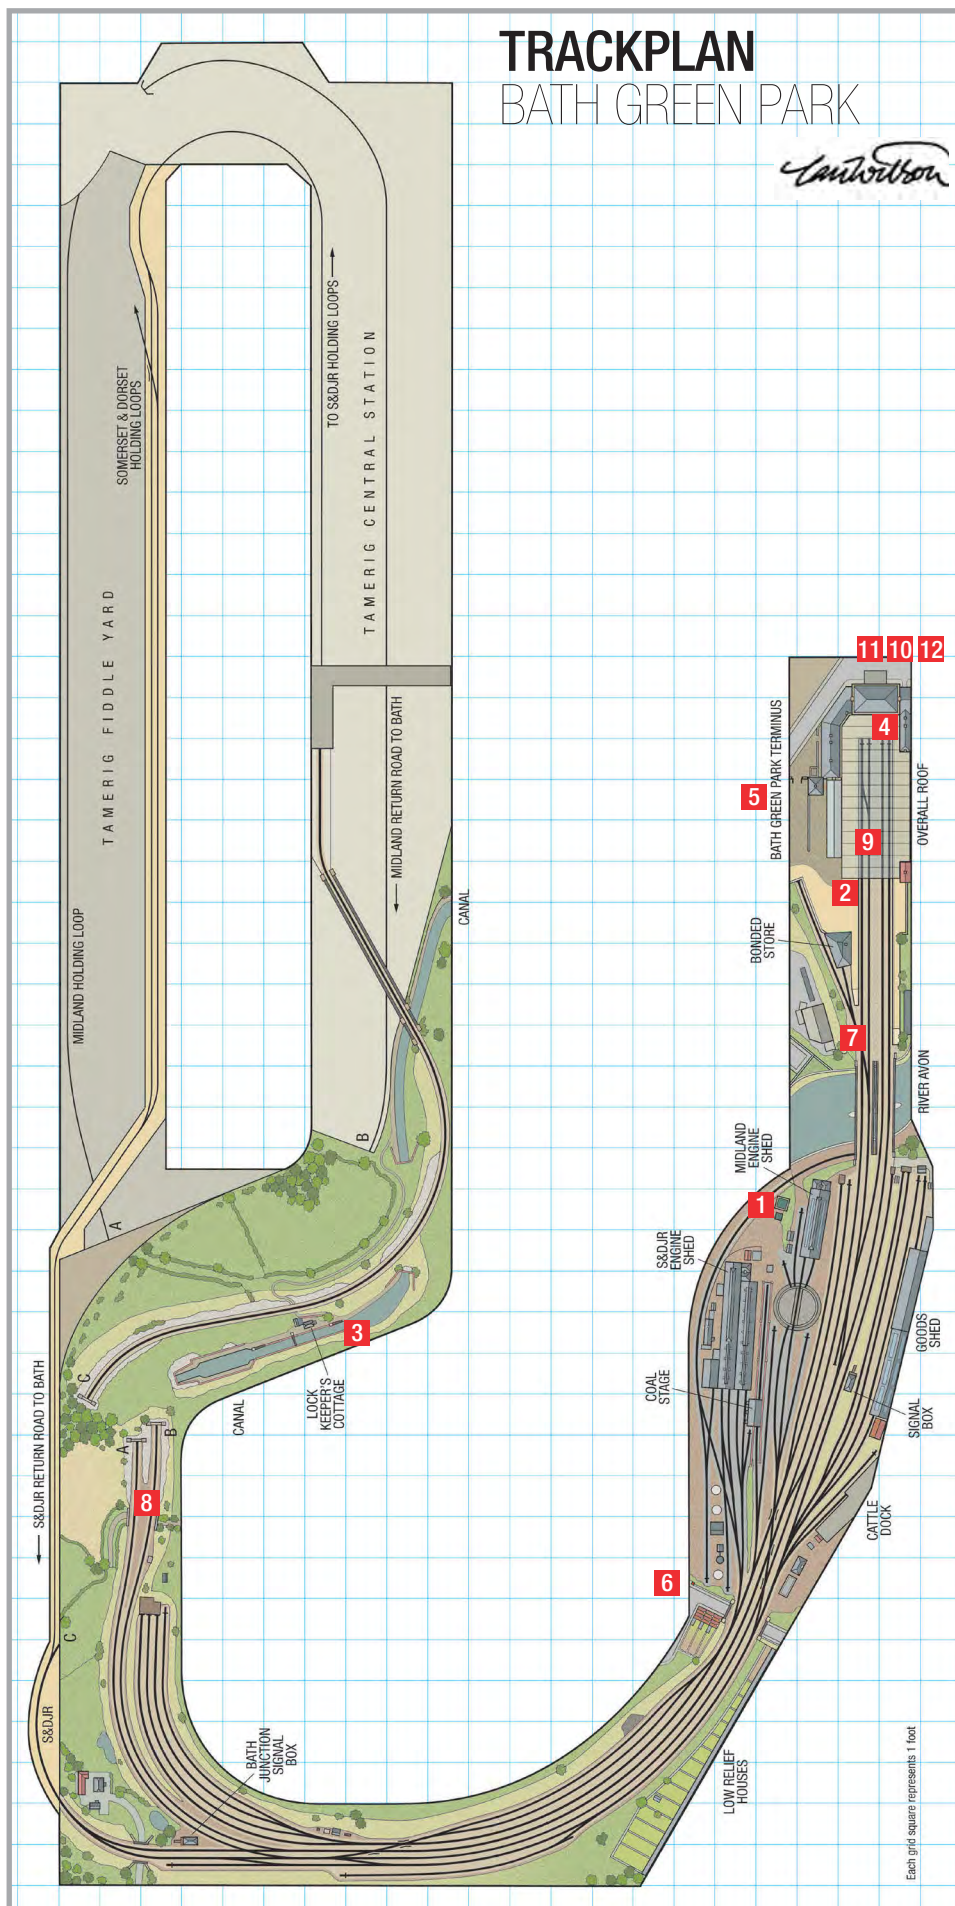

4

6

ask the expert

Q How difficult was it to design such a large layout and ensure that it was practical to dismantle and transport to exhibitions?

A The design required provision for easy transport in a van fitted with a tail lift. This was achieved with a few redesigns as the scheme developed. We even drew the van 'footprint' on the clubroom floor and 'loaded' the baseboards into it to check our calculations - and nearly forgot the body height under the roller door was lower than the body roof!

The 'away' version has an overall 57ft by 12ft footprint, including safety barriers and operator space. Weight is important in such a large model, with the need to build it in manageable sections. This was achieved using good quality 9mm plywood throughout. Large holes cut

into the support bearers save weight and allow the wiring looms to be kept within the framework structure.

A ledge at one end of each section offers support to its neighbour with locating pegs and holes in the adjoining vertical edges to give precise positioning during bolt tightening as the sections join together. Multiple 25-pin jumper leads connect each board electrically, with up to six short jumper leads required between boards, plus up to nine considerably longer leads to each operator console. They all require careful handling when being both plugged in and disconnected to avoid potential damage.

ABOVE: As an inter-regional route, the S&D saw locomotives and rolling stock from the SR, LMR and, on occasions, the Eastern Region, such as this 'B1' 4-6-0 heading home with a cross-country express.

RIGHT: No. 53808 is one of several S&D 7F 2-8-0s in the layout's fleet, seen here heading a fitted van train through the country section.

'away' modes. The rest has been built twice - the 'away' set is built in a semi-straight line to reflect the prototype, the 'home' set fits within our building in a curve and is fixed. This partial duplication has been well justified, even though we had to build Bath Junction signalbox and its entire track layout twice!

The wide variety of skills possessed by our small membership offered adequate scope for everyone to be kept well occupied. We were fortunate to have an excellent landscape painter for our backscenes, clever underboard and operator console wiring wizards, a gifted track builder who constructed very high quality trackwork, plus several who possess the modelling abilities so vital for the excellent quality required for the many structures. This included the very challenging design and construction of the station overall roof. All signals, main and ground, are fully operational and electrically lit.

Neither must we forget the members who undertook the extensive research of endless reams of maps, literally hundreds of photographs, and all the other resources so vital to enable the constructors to construct. Preliminary research took two years, including site visits. It has been and continues to be very much a total team effort.

Fourteen years after construction began in 1999 we reached the point where the layout was virtually finished. It is an ongoing process, but well worth the effort to see it all come together and in full operation.

AB E: 'BGP's' operating sequence requires a minimum of 12 trains and 16 locomotives, ranging from the 'Pines Express' to local trains such as this one to Bristol headed by Ivatt 2MT 2-6-2T No. 41252.

LEFT: A Bristol bus operated by Bath Services arrives on the station forecourt, providing onward connections for passengers.

AUTHENTIC OPERATION

We try to portray a working sequence to showcase a variety of typical traffic. To operate a direct copy of an original timetable would be difficult, and would be boring for the average visitor. By attempting plenty of movement in so far as the electrical configuration will permit, the aim is to represent prototype practice in the spirit if not the actual letter of the former BR documents issued to manage these.

We use the cab control principle whereby each of the three main operators can access most of the layout from each console panel as appropriate, with two smaller panels controlling the goods yard and exchange sidings - the timetable offers each operator a fairly demanding but equitable schedule of activity.

Our operating sequence requires a minimum of 12 train formations and 16 locomotives, with duplicates to keep spectators interested. Trains change locomotives at the station, mainly serviced by light engine movements to and from the sheds to portray the prototype operating and movement interest. Prior to 1962, the S&D had five basic traffic flows: 1) expresses between the north and Bournemouth that reversed in the station; 2) S&D locals between Bath and Evercreech Junction/

RIGHT: That first teasing glimpse of trains through the doorway of a big station heightens the excitement of any journey and, for many of us, led to a lifetime's interest in railways.

BELOW RIGHT: Despite what the chalked notice says, the fog seems to have lifted and hopefully our trains will run to time.

Bournemouth; 3) Midland locals between Bath and Mangotsfield/Bristol; 4) through S&D route goods to/from the Midland, principally to/from the North Somerset coalfields; and 5) terminating goods traffic from both the Midland and S&D into Bath goods yard and local private sidings.

Our schedule aims to reflect this diversity, but to achieve it proved more difficult than we had initially expected. The desired working pattern generated unacceptable operator activity level within the limitations of the electrical wiring circuitry and hand-held controllers. Greater success came when another operator was introduced to work two new mini-panels created to ease the workload of the other console operators outlined above.

The layout is operated to a pre-planned timetable sequence that is printed to read from bottom to top on the operator schedules. It repeats at roughly hourly frequency, using tinplate backed schedule sheets in a plastic envelope clipped to a folding angled wooden support frame. A magnetic strip is progressively moved up the outside surface of the envelope to hide completed moves, and leave the next ones readily visible.

DCC operation has been considered but practical reasons preclude its adoption. All stock is member owned and not kept at the clubroom, as it is also used on home layouts. It would be expensive and cumbersome to expect all our members to convert their stock.

We use the Kadee couplings, which are extremely reliable. All are checked regularly on the master gauge to ensure uniform coupling height. Likewise, regular checks on wheel back-to-back measurements ensure reliable running. Stock is verified and certificated for compliance by a nominated member.

TEAM EFFORT

We were fortunate to receive support from many individuals and organisations, duly acknowledged on a clubroom display board. We thank them for their generosity and assistance, all of which has been, and continues to be, very much appreciated. Special mention must go to the West Somerset Railway for its support since 1976.

Our members have achieved a real team effort that requires an ongoing long-term dedication and commitment. Regular running sessions are held on club nights to maintain operator skills between public events. It is also good fun to be able to relax a little in private!

Our over-arching aim throughout has been twofold; to showcase the model in its own right as a standalone attraction, and to provide a finescale fully working layout to enrich the experience. We think these aspirations have been achieved and invite visitors to judge for themselves. We also wanted to set ourselves a challenging project and it has amply achieved this in full measure! ■

PART THREE

ENHANCE YOUR CARD KIT

Phil Parker continues his simple, quick and cost-effective enhancements of the free **BRM** card kit, this month adding interior furnishings and décor.

ABOVE: One corner of the **BRM** card kit is known as the 'Old Station Tea Room' using signs and posters supplied on the DVD with last month's issue.

SHOPPING LIST

I Faller 180545 interior accessories, £20.00
W www.gaugemaster.com

I Interior Detail Kit
W www.scalescenics.com

Switch on the lights in the free **BRM** card kit building - I showed how to install them last issue - and you won't be able to resist taking a peek through the windows. Inside, you'll see nicely printed walls with wooden panelling and doors to link the rooms, but

that aside, it's all looking a bit empty. The key to decorating the inside of a building is realising just how crude the modelling can be, yet still look great. You could spend hours fussing over miniature furniture, but when viewed through a tiny window - even with lights - it's difficult to pick out

detail. Models often suffer from a lack of space. The free **BRM** card kit has thin walls, but even so, the rooms scale out at 10ft wide and 20ft long - not large for a commercial building.

So, rather than leave your card kit and other layout buildings looking derelict, let's furnish them. ■

It's time to unleash the interior designer in you. Interior furnishings have evolved over the decades, as such they can easily reflect the era you model. Remember that your grandma's swirly wallpaper was once very fashionable and could be just the thing for the period of your model.

Add your own details

Using 6mm wide strips of thin card, I'm folding up simple chairs. You can only see the tops, so I'm not worried about complicated legs. Let's keep it simple.

Cakes and the plates they sit on are punched from various thicknesses of card using a leather punch. Icing is courtesy of felt tip pens - this all adds to the counter.

The signs displayed behind the counter were supplied with last month's issue. A felt tipped pen should be used to colour in the white edges and make them blend better.

Save time with kits

This domestic interior is designed to fit the Skaledale unpainted town house (ref R9644). It's not a large model, but it depicts a typical terraced home found across the country.

Available as a kit download in OO or N from its website, Scalescenes interior furniture pack can be adjusted to any scale using your printer settings.

The front room scene looks very 1950s/60s. Everything you see is part of the Scalescenes kit. Being a download, you can make as many copies as you like.

Some of the parts have to be glued to thick card. The layers of card are built up as shown on this month's DVD, then wrapped with parts printed on ordinary paper.

If card isn't for you, an alternative is this set from Faller. It contains plastic furniture for a modern house and office. Included is a pair of lighting units.

on your DVD...

Supplied on your FREE DVD with this issue of **BRM** is a backscene, pavement and fencing to make a diorama for your building. On next month's DVD we'll show you how to use it.

Watch Phil modelling the interior on your free DVD!

The interior signs used in this article and demonstrated on this month's DVD were supplied with the February issue of **BRM**, still available to download as a digital edition today. Visit www.brm.ag/FebCardKit

Some of the furniture is very detailed once assembled as you can see from these office chairs. It depends entirely on what era you model.

This room is far more modern. The back of the cupboards are open so if anything faces the viewer, as the TV did, a scrap of plastic should be fixed over the gap.

HOW TO...

MAKE A STATION CANOPY

Canopies once adorned many stations, providing much-needed shelter. Phil Parker wanted one for his **BRM** project layout 'Ruston Quays'.

ABOVE: Making a canopy from scratch can be a challenge. Using a kit saves time with room for customisation.

SHOPPING LIST

KIT & MATERIALS

- I Small spirit level
- I Plastic cement
- I Liquid plastic glue
- I Canopy glue

When working on the design for 'Ruston Quays', I had a long conversation with Paul Lunn about the station. I knew we didn't have space to model all of it, but that created a problem - how would I hide the fact that most of it wasn't there?

Paul's solution involved using Airfix (now Dapol) platform canopies, assembled with the ridges at 90 degrees to the track. To the front would be a wall, so trains can partly disappear out of sight.

I was struggling to realise this in three dimensions. Paul suggested Dewsbury Market as inspiration. The alignment of the canopies is the same, but mine are on an island

platform and open at the sides, so I needed to make a curtain wall.

If you imagine passengers standing on a raised platform on a viaduct in an open area, I can imagine that pretty quickly they would demand protection from the wind. Any company hoping to build a successful terminus station would be wise to design a structure to solve the problem.

Unsure how the model would look, I built a couple of bays and the front wall, then displayed the results on the layout at the Warley show. If people felt it looked wrong only a few hours work would be lost and I could try something else. As it happened, visitors liked what they saw.

There's a lot to be said for assembling the main parts of a model and leaving the detailing for a while. A few days pause allows you to look at it with fresh eyes and see if you are still happy. Whether it's a good idea to try several thousand pairs of fresh eyes at the biggest show in the country is more questionable.

Now finished with heavy weathering, the station adds some useful height to the layout, balancing out the big warehouse at the other end of the model.

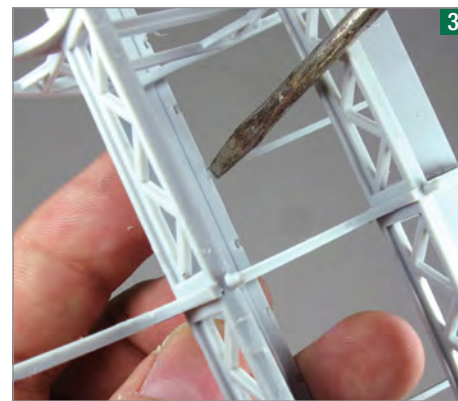

Just as importantly, it's great for hiding the shortened platforms and adds another point of interest to the gritty urban scene. ■

Paul Lunn's painting shows ridged canopies at right angles to the track. The high wooden wall at the end acts as a view blocker to hide the fact we don't have space to model all of the station.

The raw material for the canopy is the Dapol plastic kit. Introduced in 1959, the parts are now moulded in soft grey plastic to reduce wear on the tools. After a little cleaning up, the pieces still slot together well enough.

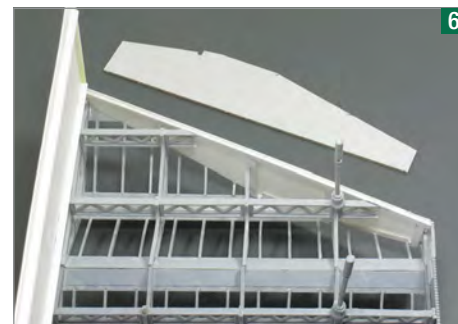

Glazing should be fitted early on, but painting the bars is fiddly. I'm glazing them after. Ensure the bars are flush with the underside of the supports. Prodding them with a screwdriver while the glue is still soft helps.

On our model, the front is supported by a tall wooden wall. This is made from a sheet of 1mm thick plastic, scribed to represent planks and cut to fit the profile of the canopies.

The baseboard end presented the biggest challenge as the canopies don't finish square with the edge. You can see just how much has to be removed from the end bay. This caused quite a bit of head scratching.

My solution began by cutting away the bottom girders and installing a strip of thick plastic. A card template was cut to fit the roof line and I transferred this to plastic sheet and fitted it in place.

The model was spray painted and then individual glazing strips fixed in place. In keeping with the run-down look, not all the panes are glazed and some have been replaced with Slater's embossed corrugated sheet.

ask the expert

Q When I stick glazing in place, it always goes cloudy. How can I stop this?

A I suspect you are using superglue. The fumes are attracted to any grease on the clear plastic where they settle and become opaque. Avoid this by using canopy glue designed for the job. It is a high-quality PVA which dries clear. Any excess can be rubbed away with a cocktail stick.

from the archives

When building a model, I like to find a photograph for inspiration. In this case, it's a picture of a 'Derby Lightweight' diesel railcar at Banbury Merton Street. The modern motive power contrasts with a wooden building and platform. Overhead, the canopy is open to the elements. It epitomises the down-at-heel atmosphere I wanted for the station.

Banbury Merton Street in its last days. Although the structure is (just about) standing, the canopy glazing is a distant memory. Scenes like this inspire me, providing the atmosphere of a steam-era railway in a run-down state. BRIAN STEPHENSON/RAS

Kit design is a very personal process. Builders often need to get into the mind of the designer; there are few standard ways of doing things, so every model has its quirks. Many modellers have favourite ranges as they like the way things are designed. Since most kit manufacturers are cottage industries, you can get to know the kit designer and chat to them either at shows or by e-mail - handy for clearing up queries.

Kitbuilding is more than just a way to acquire a model, it's a process full of pleasures and frustrations, hopefully resulting in a model to be proud of, whatever the standard.

Quoting the instructions by Roger Slade from CSP, while he hopes modellers enjoy building this Sentinel kit, "it will not be a cakewalk."

I agree. This might be a small locomotive but it's not suitable for a beginner. If you've got a couple of other etched kits under your belt and are willing to work methodically, it's possible to produce an incredibly detailed model.

The kit is supplied with all the parts in the box. There's no need to source a motor, gears or wheels as you do for other models and all the parts are top quality.

A High Level Models gearbox is as good as it gets and since there aren't any coupling rods, a gear train is provided to share the drive to both axles.

Instructions include copious exploded diagrams from the designer's

CAD system, lots of text and for extra assistance, several pages of notes from an early builder. The latter also covers building the model with compensated axles for P4.

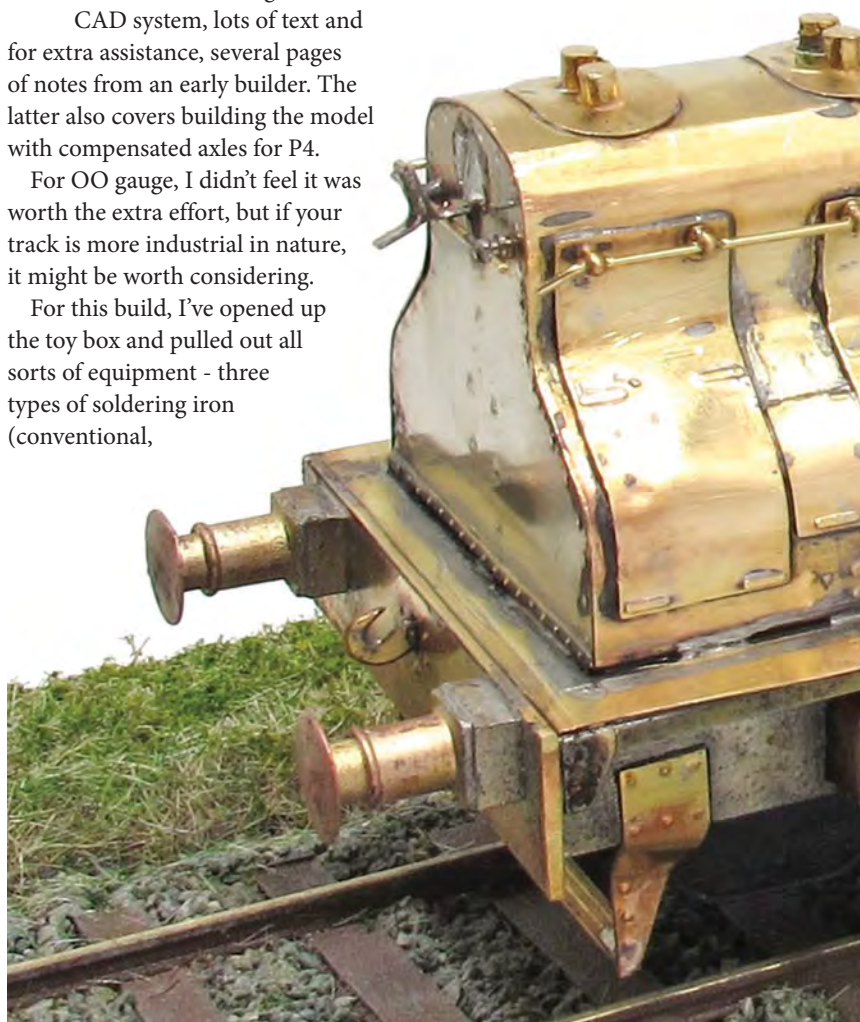

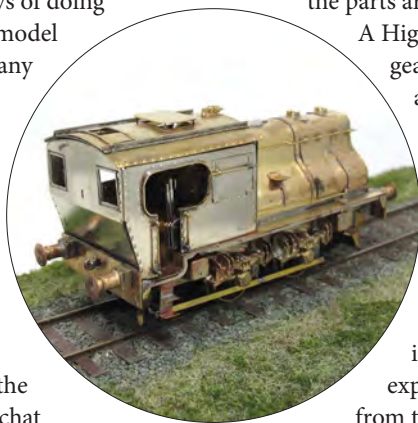

For OO gauge, I didn't feel it was worth the extra effort, but if your track is more industrial in nature, it might be worth considering.

For this build, I've opened up the toy box and pulled out all sorts of equipment - three types of soldering iron (conventional,

resistance and gas torch), a rivet press, rolling bars and a selection of cutting broaches. You could get away with less equipment, but not much.

Flat material needs to be rolled and personally I've never had much success with bending tubes - the result always ends up a series of flats. That's why I own rolling bars.

The rivets need to be pressed out and you could use a blunt nail or a drop hammer but a proper rivet press is a joy to use. Each of these costs the same as a mid-range RTR locomotive, but they should last forever. ■

There is an awful lot of modelling packed into this tiny locomotive. Building it requires more than a quick shake of the box, but the result is a famously quirky piece of S&D motive power.

BACK STORY S&DJR SENTINELS

Two chain-driven 200hp Sentinel shunters were delivered in 1929 to the S&DJR to be used at Radstock replacing more conventional life-expired saddle tanks.

For those used to 'normal' locomotives, the Sentinel machines would have seemed quite alien. The vertical boiler filled half the cab making it incredibly hot and cramped to work in. Under the bonnet, a pair of vertical steam engines drove the wheels through a combination of chains and gears. Two speeds were available, selected via gear levers in the cab.

Both Sentinels proved to be powerful for their size and economic in coal consumption, but neither survived into preservation, being cut up in 1959 (47191) and 1961 (47190). However, Croydon Gasworks No. 37 Joyce, a very similar machine, is under restoration at Midsomer Norton station.

COLOUR RAIL

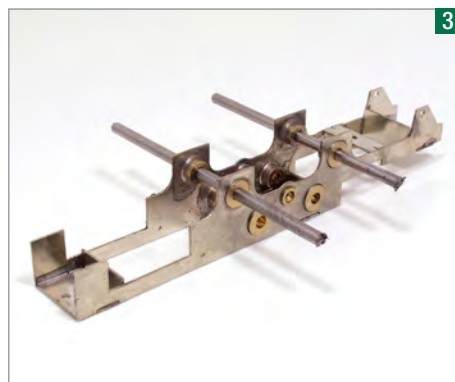

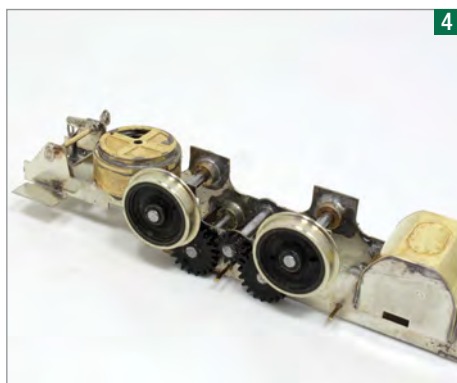

For a locomotive just 10cm long there are lots of etched parts making this a very detailed model. Helpfully, all are numbered on the etch.

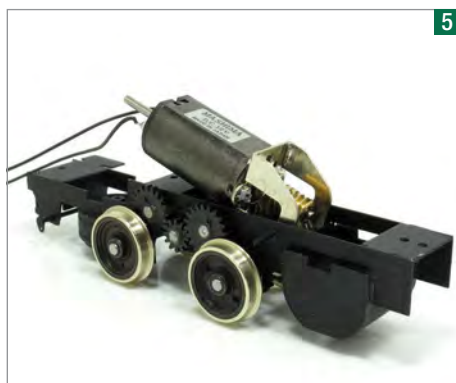

There are no whitmetal parts, instead, all the castings are brass and probably the cleanest examples I've ever seen in a model locomotive kit.

The drive is shared between the two axles by a gear train so there are a lot of bearings to fit in the chassis sides. I'm using the 2mm axles to aid lining up the sides.

Each gear is a push fit on the end of its axle. The instructions recommend holding them with Loctite, but they are a tight enough fit. A quick test is required.

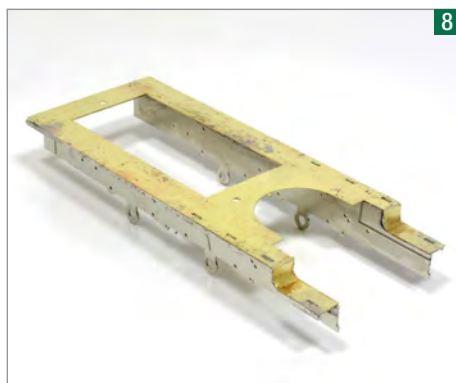

A High Level Models gearbox is provided to power the front axle. Once happy it all works, the chassis is sprayed with primer then matt black using car aerosol paints.

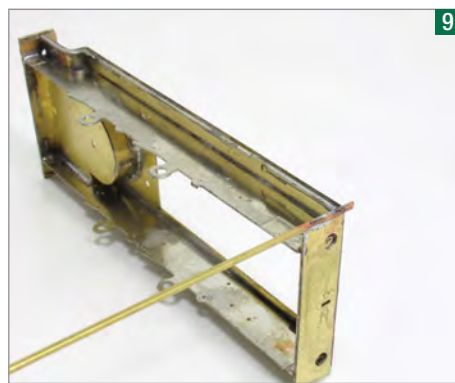

The brake pull rods are quite chunky in the kit, as with the prototype. There's only a millimetre clearance between the sides. Make sure your wheels don't wobble.

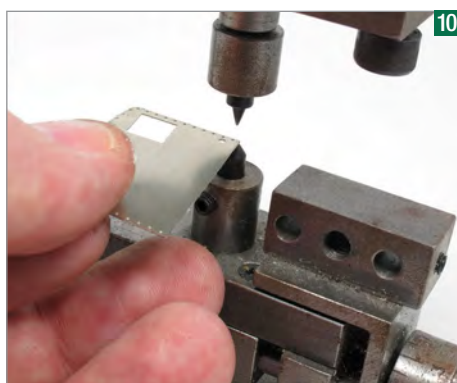

Spare etch is drilled to fit wires attached to the bottom of the brake hangers. I can't clean the chassis easily now, so I'm using DCCconcepts' Sapphire non-corrosive flux.

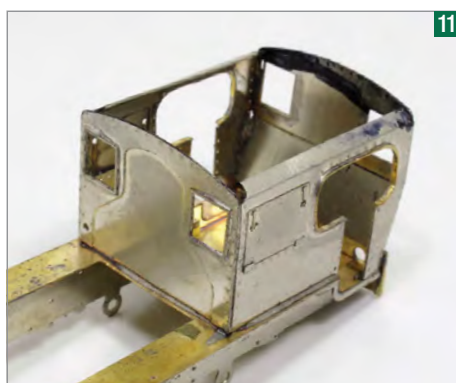

The very fine footplate valances are soldered against half-etch lines on the underside. The curved parts nearest are separate and bent to fit.

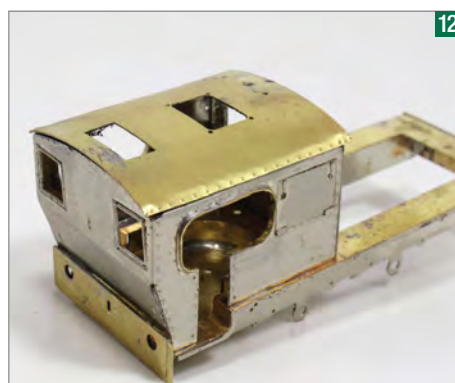

Both bufferbeams seem to be slightly narrow. Some square brass rod soldered to the side and filed to shape fill the gap. Layers of scrap etch would work just as well.

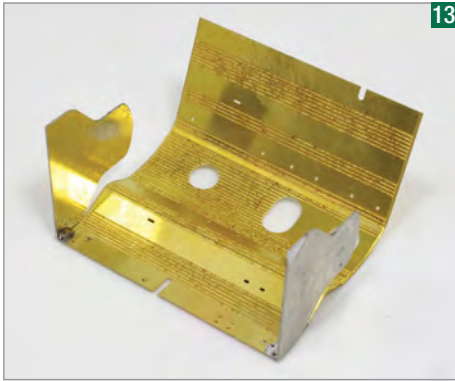

The locomotive is covered in rivets and these have to be formed using the half-etched marks on the back of the metal. I'm using a GW Models punch for this job.

The windows and side shutters are fitted before folding the part. The beading is supplied as an etched strip. Tack one end in place and then follow around the edge.

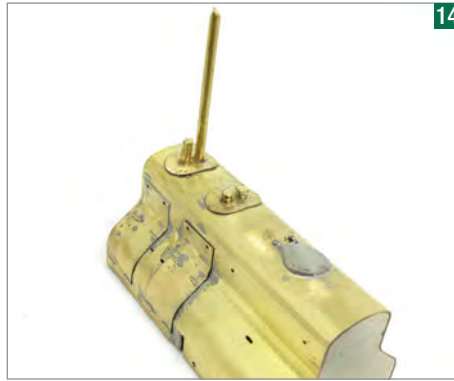

Form the gentle main bend in the roof followed by the sharper bends at the edges. Ignore the instructions to punch the rivets first - you'll flatten them when bending.

13

Forming the bonnet looks harder than it is. Tack the ends in place then push the cover around, tack soldering it as you go. The half etch lines make it easy to bend.

14

Four cylinder end caps are fitted in holes in the oval plates at the end. A 1.5mm rod is soldered in place, then cut roughly to length. The parts are then tidied with a file.

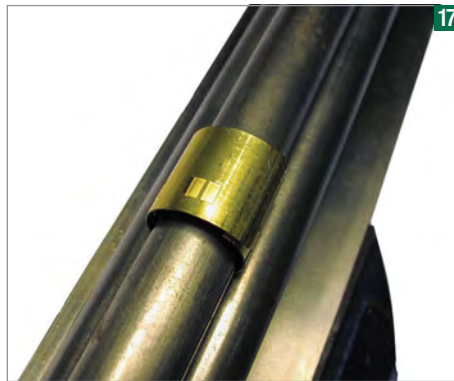

15

Keeping all the handrails in-line is easier if the knobs are fitted to a single length of wire. Solder each one from inside, securing it with superglue. Cut it to form the gaps.

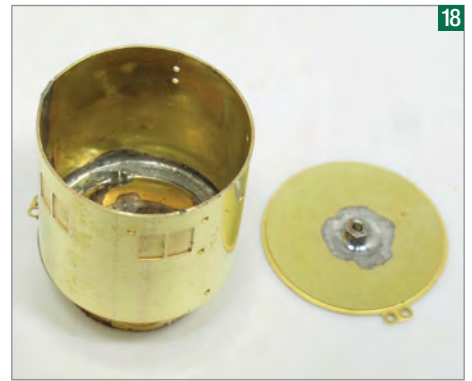

16

Both the cab front and bonnet back have to be opened out to fit over the motor. A combination of filing and work with a piercing saw worked, but care needs to be taken.

17

The detailed boiler requires many parts to be rolled accurately from flat sheet. I'm using a set of GW Models rollers, but if all else fails, brass tube could be used.

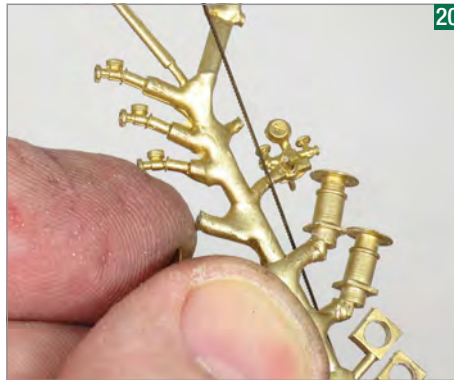

18

The boiler is a useful place to add weight. Although the instructions suggest filling it at this stage, I made a hole in the top to add liquid lead once the model is finished.

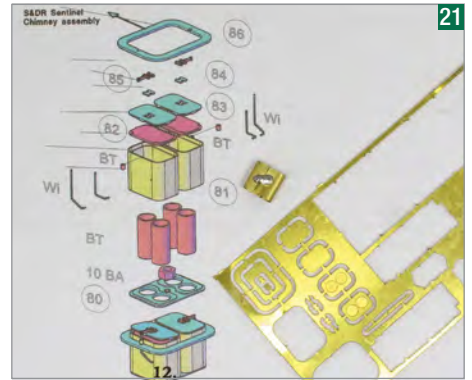

19

Castings and etched parts decorate the basic vertical boiler. Some of the brackets are hidden so I'm leaving them off. I'm soldering them in place with an RSU.

20

Although the cast brass is quite soft, cutting it from the sprue is best done with a fine bladed piercing saw. Not all of the parts supplied are used.

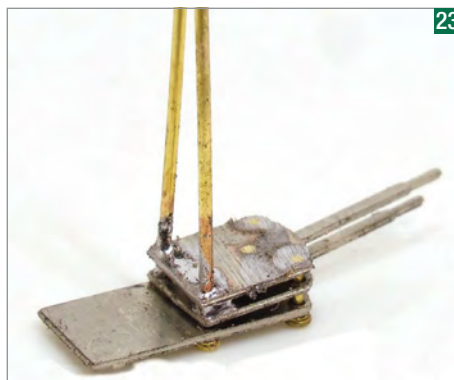

21

The most complicated parts are the chimneys. You have to accurately bend and form parts, but they are slightly too tall and need to be reduced in height to fit.

22

A cover over the chimneys is supported on lengths of wire. It hides the missing chimney - I'm sure some modellers will enjoy adding detail that can't be seen.

23

The control levers are a struggle - I can't relate the parts to the instructions. The layers of the mechanism and levers are held together with brass pins, then soldered.

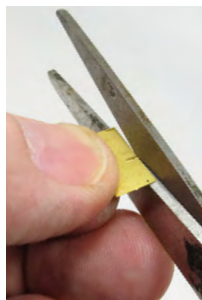

24

Bends are usually formed with the half etch line inside a corner, but in this case the coal bunker would be inside out. The sides are broken and re-soldered in place.

QUICK FIX

CLEANING UP ETCHED EDGES

Rather than file away etched part tabs, I prefer to cut straight lines using a pair of scissors. It's far quicker than using a file and leaves a perfect edge.

I ask the expert

Q What is a Resistance Soldering Iron (RSU) and do I really need one?
Q What advantages does it offer over a standard soldering iron?

A RSU stands for Resistance Soldering Unit. Instead of heating solder with a hot iron, the device uses electricity. While not an essential tool, it's useful if you're planning on a lot of etched kit building as the device makes adding overlays and castings a breeze.

The anonymous box has a black negative connection and three red positive ones. The black lead is attached to the model with a crocodile clip. The red lead is plugged into one of the sockets, the choice depends on the power required for the job.

The component to be attached is tinned with a thin layer of solder. It's then held in place with the carbon probe attached to the red lead. A foot

switch turns the current on and the solder between the probe and earth is heated up. Releasing the switch turns the power off and the solder cools. Using the probe to hold the part in place should ensure it doesn't move, something harder to do with a conventional soldering iron.

RIGHT: Finished in BR black as No. 47190, CSP's Radstock Sentinel is a powerful and controllable shunting locomotive. These weren't high-speed machines which must have made the trips to Bath Green Park and Derby interesting. Most of the time, the model will potter around good yards.

INSTALL ACCESSORY DECODER ADAPTORS

Nigel Burkin discovers a solution for operating slow-action point motors from conventional DCC accessory decoders.

ABOVE: The slow-action motors that control this junction were chosen over solenoid motors for reliability. They can now be operated via the layout DCC power bus using Cobalt adaptors from DCCconcepts.

SHOPPING LIST

PRODUCT

DCC CONCEPTS SDC Decoder Adaptor (Three pack) £11.25

CONTACT

• DCC CONCEPTS
W www.gaugemaster.com
T 01903 884 321

More modellers are discarding traditional solenoid point motors in favour of slow-action types for a more realistic look and greater reliability. Many DCC layout accessory decoders can operate solenoid point motors or slow-action machines, but rarely both. Changing from one type of point motor system to another has often meant changing the accessory decoders on DCC layouts and this adds to the conversion cost.

Solenoid point motors such as SEEP or Peco have three terminals, one for each pole of the solenoid

(+ and -) and a common wire (C). Accessory decoders designed to work with these motors have the necessary three terminals and deliver a timed pulse of power to throw the solenoid when activated.

Slow-action point motors such as 'Tortoise' and 'Cobalt' work with a constant supply of DC power through two wires. They are controlled by reversing power polarity using a double pole, double throw (DPDT) switch. At the end of travel they stall and lock the point blades. The outputs of a decoder designed to power solenoid motors won't suit a slow-action type.

To solve this, DCCconcepts offers a solution that allows slow-action point motors to be controlled by solenoid accessory decoders.

Its 'SDC Decoder Adaptor' converts popular accessory decoders (such as the Lenz LS150 and ESU 'Switch Pilot') from a three- to two-wire output.

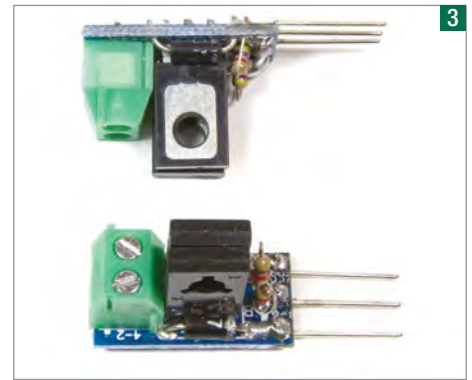

Just plug the three prongs of the SDC adaptor into the output terminals of the solenoid accessory decoder - the middle one being the common. Then, wire up the two-wire stall motor point machine to the output terminals of the SDC adaptor. Simple, but effective. ■

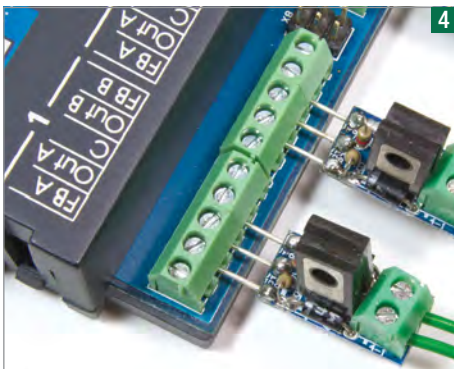

DCCconcepts offers SDC adaptors to enable solenoid accessory decoders to be used to power stall motor point machines such as the Cobalt.

I'm testing them with an ESU Switch Pilot with four three-wire output terminals. A switch selects either pulse power for solenoids or constant power for signalling.

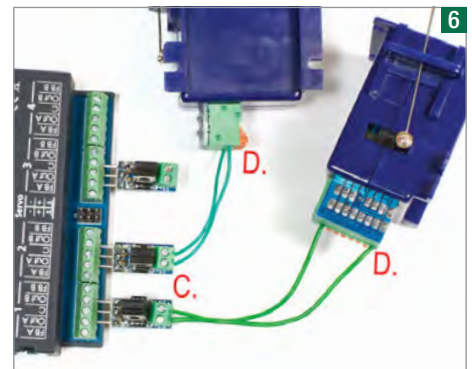

The adaptor circuits convert a three- to two-wire output for use with slow-action point motors. They don't change the power-on or pulse duration.

To install, just plug the adaptor into the output terminals of the accessory decoder - the middle pin is the common terminal. The pins can be shortened if required.

Note the power supply input from the track power bus or a separate DCC power bus dedicated to accessory decoders (A) and the user mode selection switch (B).

With the SDC adaptors installed, note the two-wire connections to terminals 1 and 8 of the Cobalt slow-action point motors.

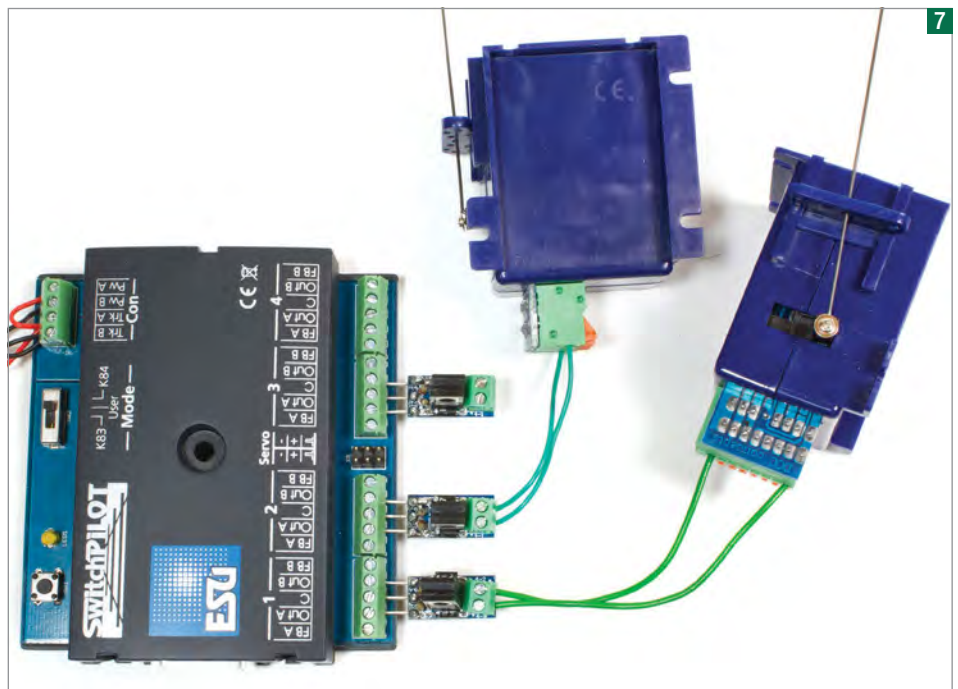

ask the expert

Q Do I need to configure my accessory decoder when these output converters are installed?

A The default 'power-on' time from the accessory decoder might not be long enough to power the motor and throw the points completely. You can adjust the settings of the decoder to the maximum length of time to throw the points before the power cuts off - consult your manual for CV settings.

SDC adaptors were tested with the popular ESU 'Switch Pilot' which features a 'user mode' choice of pulse power for solenoids (K83) or constant power (K84) for signals and lighting. Its four outputs are designed to work with three-wire devices with a common wire, not slow-action motors in either user mode.

The 'Switch Pilot' was converted with the adaptors and tested with Cobalt motors on user mode setting K83. The 'on-time' was set to the maximum for each output (value 31 in CV3 to CV6 to set each of the four outputs). The time was long enough to throw the point motor - just! It's worth noting that the output on K83 setting is active for as long as the appropriate function button is pressed on the digital system. Out of curiosity, the user mode setting was set to K84 and the SDC adaptors enabled the constant power output of this mode to power both Cobalt and Tortoise motors.

The key to the use of these converters is setting the 'pulse duration' of standard solenoid accessory decoders to the maximum allowing the motor sufficient time to throw the points. Some stall motor point machines may 'ease' off after the power switches off which is a potential problem with Tortoise models based on experience. For more information on the SDC adaptors, visit DCC Concepts' website.

The price for a pack of three SDC adaptors is an attractive option over purchasing new accessory decoders for the budget conscious modeller.

SOMERSET & DORSET

Few railways can claim to have been as so extensively copied in model form as the S&D. **Andy York** takes us on a modelling journey from Bath to Bournemouth.

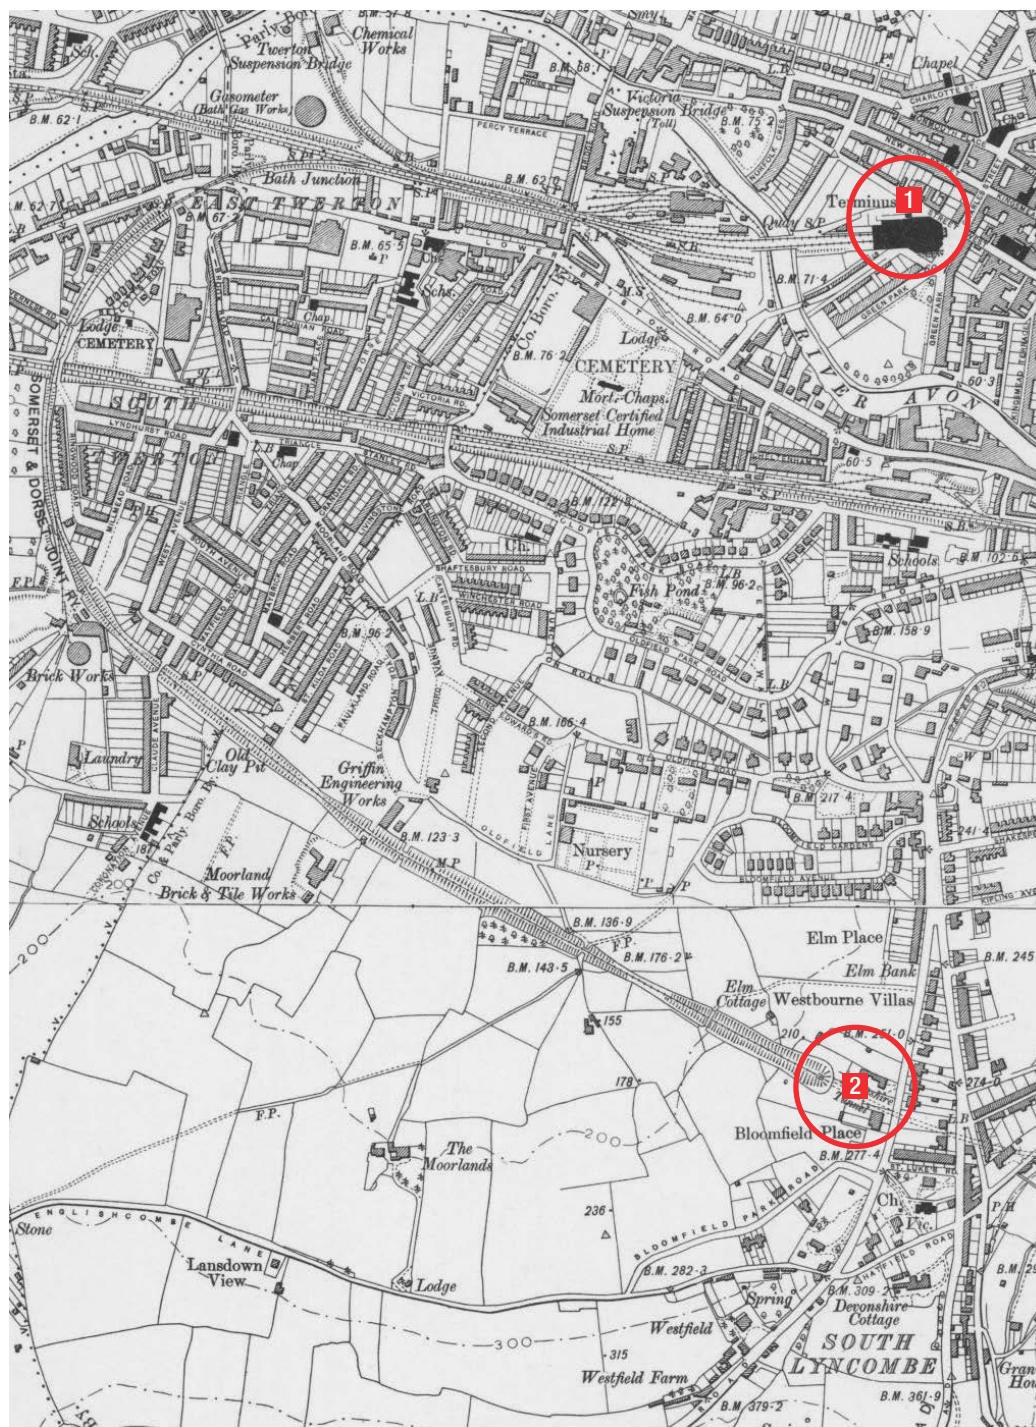

We have started our journey somewhat illogically - chronologically speaking - in

Bath with the Taunton Model Railway Group's 'Bath Green Park' and Jerry Clifford's 'Bath Queen Square' (1) representing the northern end of the route. The Midland Railway opened the station in 1870 and the Somerset & Dorset Joint Railway started to run, via its Bath Extension, from Evercreech Junction in 1874. However, the history of the line started more than a decade earlier with the opening of the Dorset Central Railway from 1860.

As the S&DJR left the Midland at Bath Junction it immediately began a steady 1-in-50 climb for two miles, simultaneously turning through almost 180 degrees to head south-eastwards away from the city. Small wonder that the northern reaches of the S&D became known for pilot locomotives and bankers. Towards the top of the gradient the railway entered the small single bore of Devonshire Tunnel (2), a fearsome environment for a steam locomotive crew at the start of a hard journey.

The railway levelled out after reaching Combe Down Tunnel at the summit of the climb and began a descent of 1-in-100 towards Midford where the single line became twin track. This part of the S&D did not follow the topography in the way earlier railways did, it was quite a civil engineering feat with tunnels, gradients and major

A MODEL JOURNEY

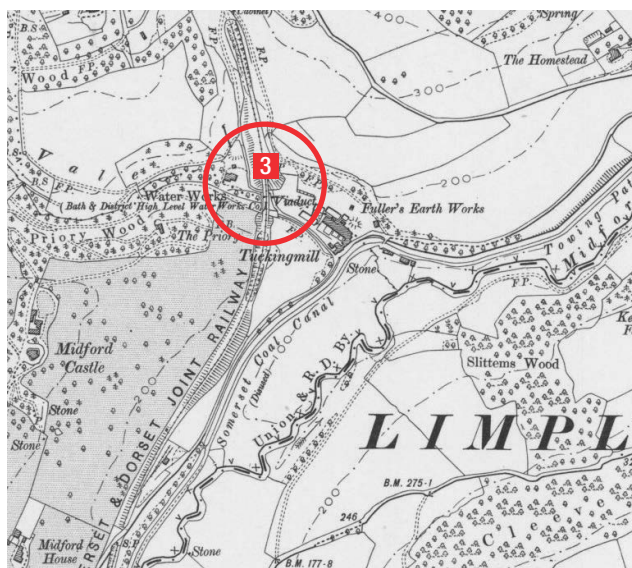

viaducts spanning the valleys.

The viaduct at Midford is immortalised in the opening sequence of *The Titfield Thunderbolt* as an air-smoothed 'West Country' storms over the viaduct while the '14XX' passes below on the Great Western's Camerton branch. Once again the line begins to climb and undulate in short bursts towards Radstock, a significant centre of coal mining. This was the origin of much of the mineral traffic over the line.

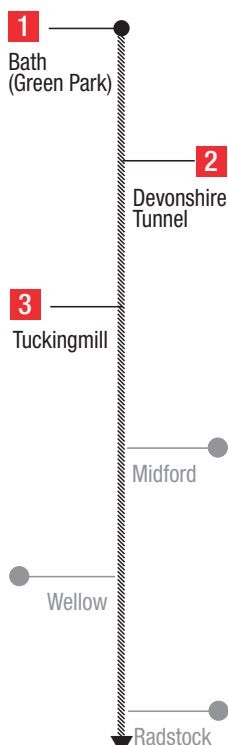

After Radstock the line again climbs for over three miles towards Chilcompton Tunnel with a brief respite of 1-in-300 through the platforms at Midsomer Norton, another settlement that flourished during the Industrial Revolution thanks to its Duchy of Cornwall collieries.

At the top of this severe gradient was Chilcompton Tunnel with its distinctive twin bores. Maybe one day we'll be able to see trains working on this section of line

LEFT: Paul Stephens' N gauge model of the bank climbing to Devonshire Tunnel showing a 4F piloting a 7F 2-8-0 on an inter-regional service making a controlled descent towards Bath Junction.

RIGHT: A 'Bagnall' - the local nickname for Fowler 3F 0-6-0Ts - banks a goods train over Tuckingmill viaduct on Jerry Clifford's 2mm finescale layout.

again as the Somerset & Dorset Railway Heritage Trust, based at Midsomer Norton (4), hopes to extend its line up to the tunnels eventually.

A further three miles on and the line reaches its summit at Binegar, 810ft above sea level, a climb of some 750ft over the 17 miles from Bath. It was here that bankers on heavier workings dropped off and returned to Bath. Past Binegar and its quarry sidings the route descended through Masbury

to Winsor Hill. Paul Stephens and Jerry Clifford are currently building a model of the section of the line passing the quarry sidings by the tunnel at Winsor Hill, which we hope to show you in **BRM** in the future.

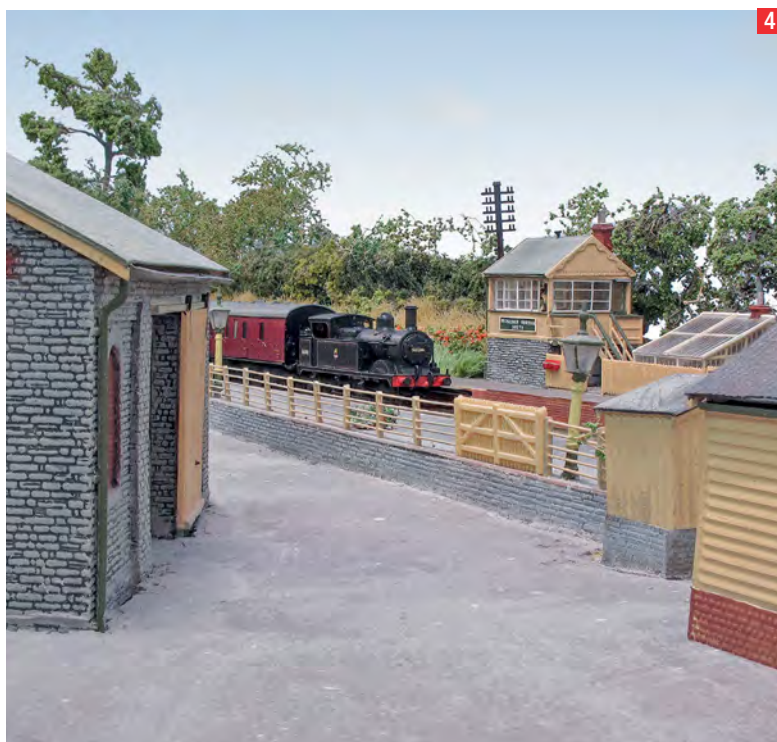

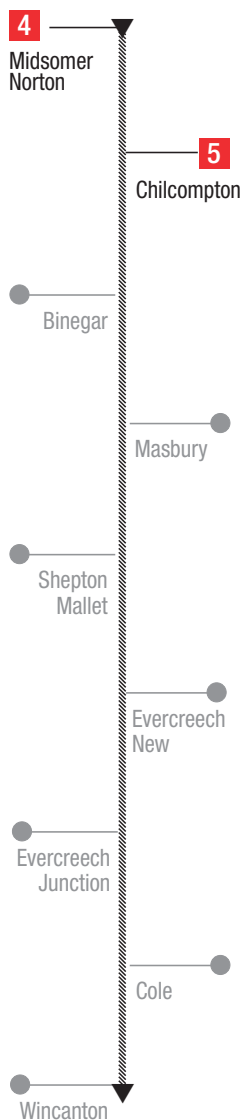

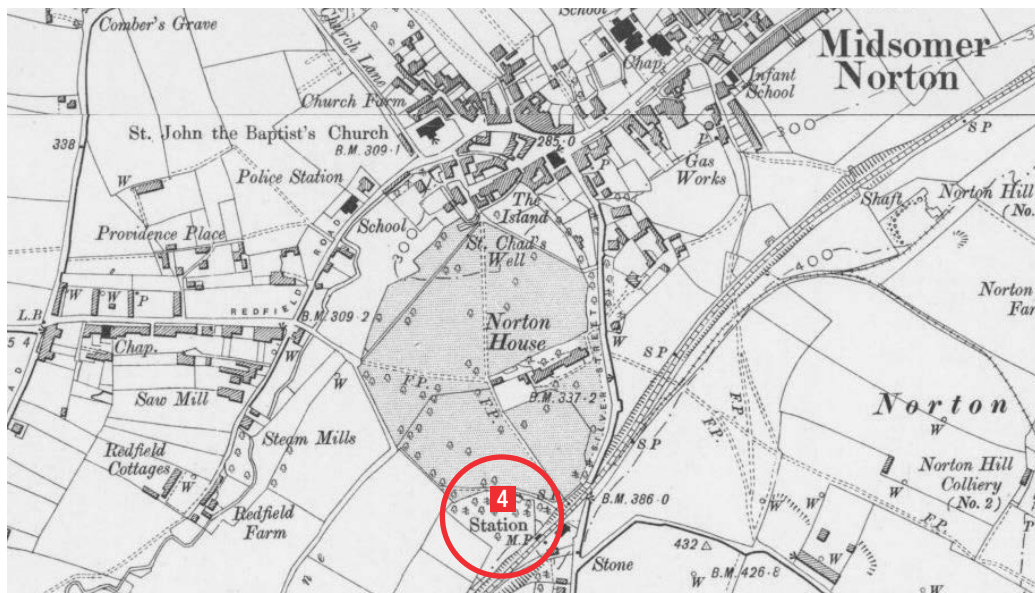

The line continues to drop toward Shepton Mallet, an agricultural market town. As the nature of originating traffic changes from industrial to agricultural, so the station facilities move more towards small goods yards, provender stores and cattle docks. Here the line goes under the Great Western's branch to Wells and on through gentler curves and gradients to Evercreech Junction with its yards and shed. We join the earlier Somerset & Dorset, the original main line, from Wimborne in Dorset to Highbridge and Burnham on the Bristol Channel.

Heading from Evercreech Junction towards Highbridge the line heads west across the Somerset Levels skirting around Glastonbury Tor. Before the railway became the Somerset & Dorset Joint it was the Somerset Central Railway, which started at Highbridge and made its way via Glastonbury to Wells. The section between Glastonbury and Cole, a few miles south of Evercreech, was completed in 1862 to join up, end on, with the Dorset Central Railway and form the basis of the Somerset & Dorset as we know it.

In **BRM** April 2013 we featured 'Bleakhouse Road' which although fictional, beautifully captures the feel of the remote stations alongside the rhynes of the Somerset Levels. Also turn to page 66 to see our article on Alistair Knox's 'Burnham on Sea' layout, which also touches on the history of the route to the Bristol Channel.

In August 2014 **BRM** featured 'Florinstone' as a Somerset & Dorset layout by Andrew Butler, a clever design showing how your layout's location can be changed with intelligent structure planning using ready-to-plant buildings - in this case based on Shillingstone.

From Evercreech Junction the

ABOVE: A Midland 2P pilots a rebuilt 'West Country' on its climb from Bath as a Johnson 0-4-4T coasts in with a stopping service on Paul Stephens 'Midsomer Norton' layout.

RIGHT: All fit locomotives were called into action on summer Saturdays, as demonstrated here at Chilcompton on Paul Stephens' layout.

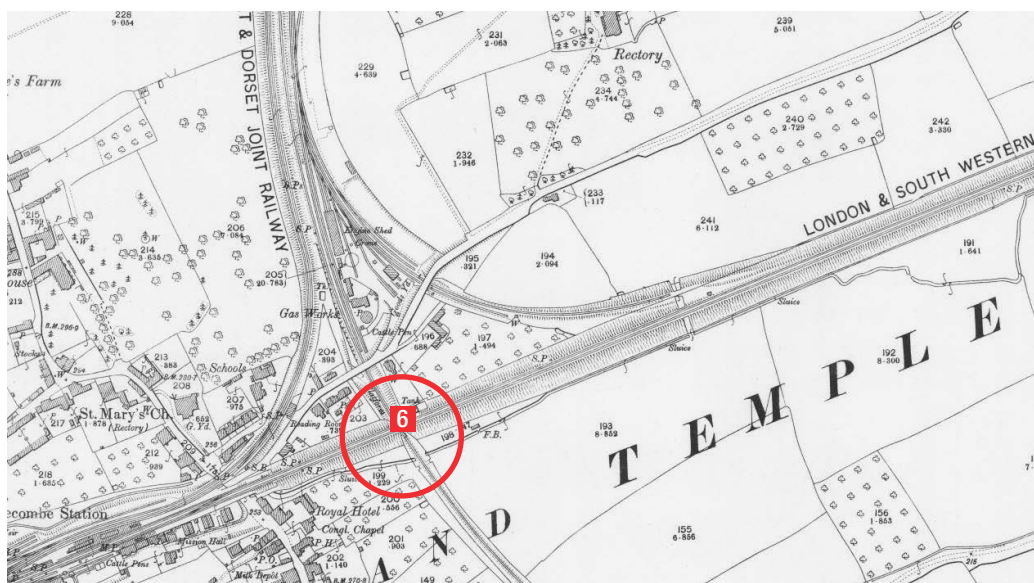

route ran south, crossing the Great Western's line to Weymouth at Cole, through Wincanton and on to Templecombe where it passed under the London & South Western Railway's main Waterloo-Exeter line - the only interchange station along the S&D route. The locomotive shed within the junction triangle at Templecombe performed an important function, servicing pilot and banking locomotives required between here and Bath.

Onwards through Stalbridge and Sturminster Newton to the now preserved Shillingstone and, featured on page 72 of this issue, Blandford Forum. After Spettisbury and Bailey Gate, the location chosen for a forthcoming model by the New Blandford Railway Club, and Corfe Mullen, the line originally headed to Wimborne Junction and Wimborne itself where trains reversed to reach Poole. The Somerset & Dorset later constructed a cut-off chord to avoid the reversal and with running rights over the L&SWR services ran through to Poole and beyond to their destination at Bournemouth West (7).

And so we complete our journey along the Somerset & Dorset at the destination of its most celebrated service, the 'Pines Express', which ran daily between Manchester and Bournemouth until the early-1960s.

Having visited several locations along the route and talked to modellers whose work is featured in this issue it is evident the Somerset & Dorset may now be 50 years gone but it is alive and well in the memories and modelling of many. ■

DECODING DCC: PART TWO

FITTING A SPEAKER

On his quest to settle the myths behind 'going digital', Howard Smith shows how to install DCC sound and a useful 'Stay Alive' device.

No matter what sound decoder you use, to fully appreciate DCC sound it needs to be reproduced through a good speaker. Most sound decoders are sold with a speaker, but if yours isn't and you're considering options it'll need to meet certain criteria - don't rush in and buy the first thing you see.

Your speaker must fit in your locomotive and leave enough room for the sound to 'bounce around' without being stifled or distorted. Always choose the largest speaker you can comfortably fit in a locomotive - the quality of the sound will be better for it.

An important consideration when choosing a speaker is to match its impedance to that of the amplifier on your decoder. Measured in Ohms, this value determines how much resistance your speaker(s) place on your amplifier. The lower the value, the higher the demand. Mis-matching values can create a distorted sound

gadget spot

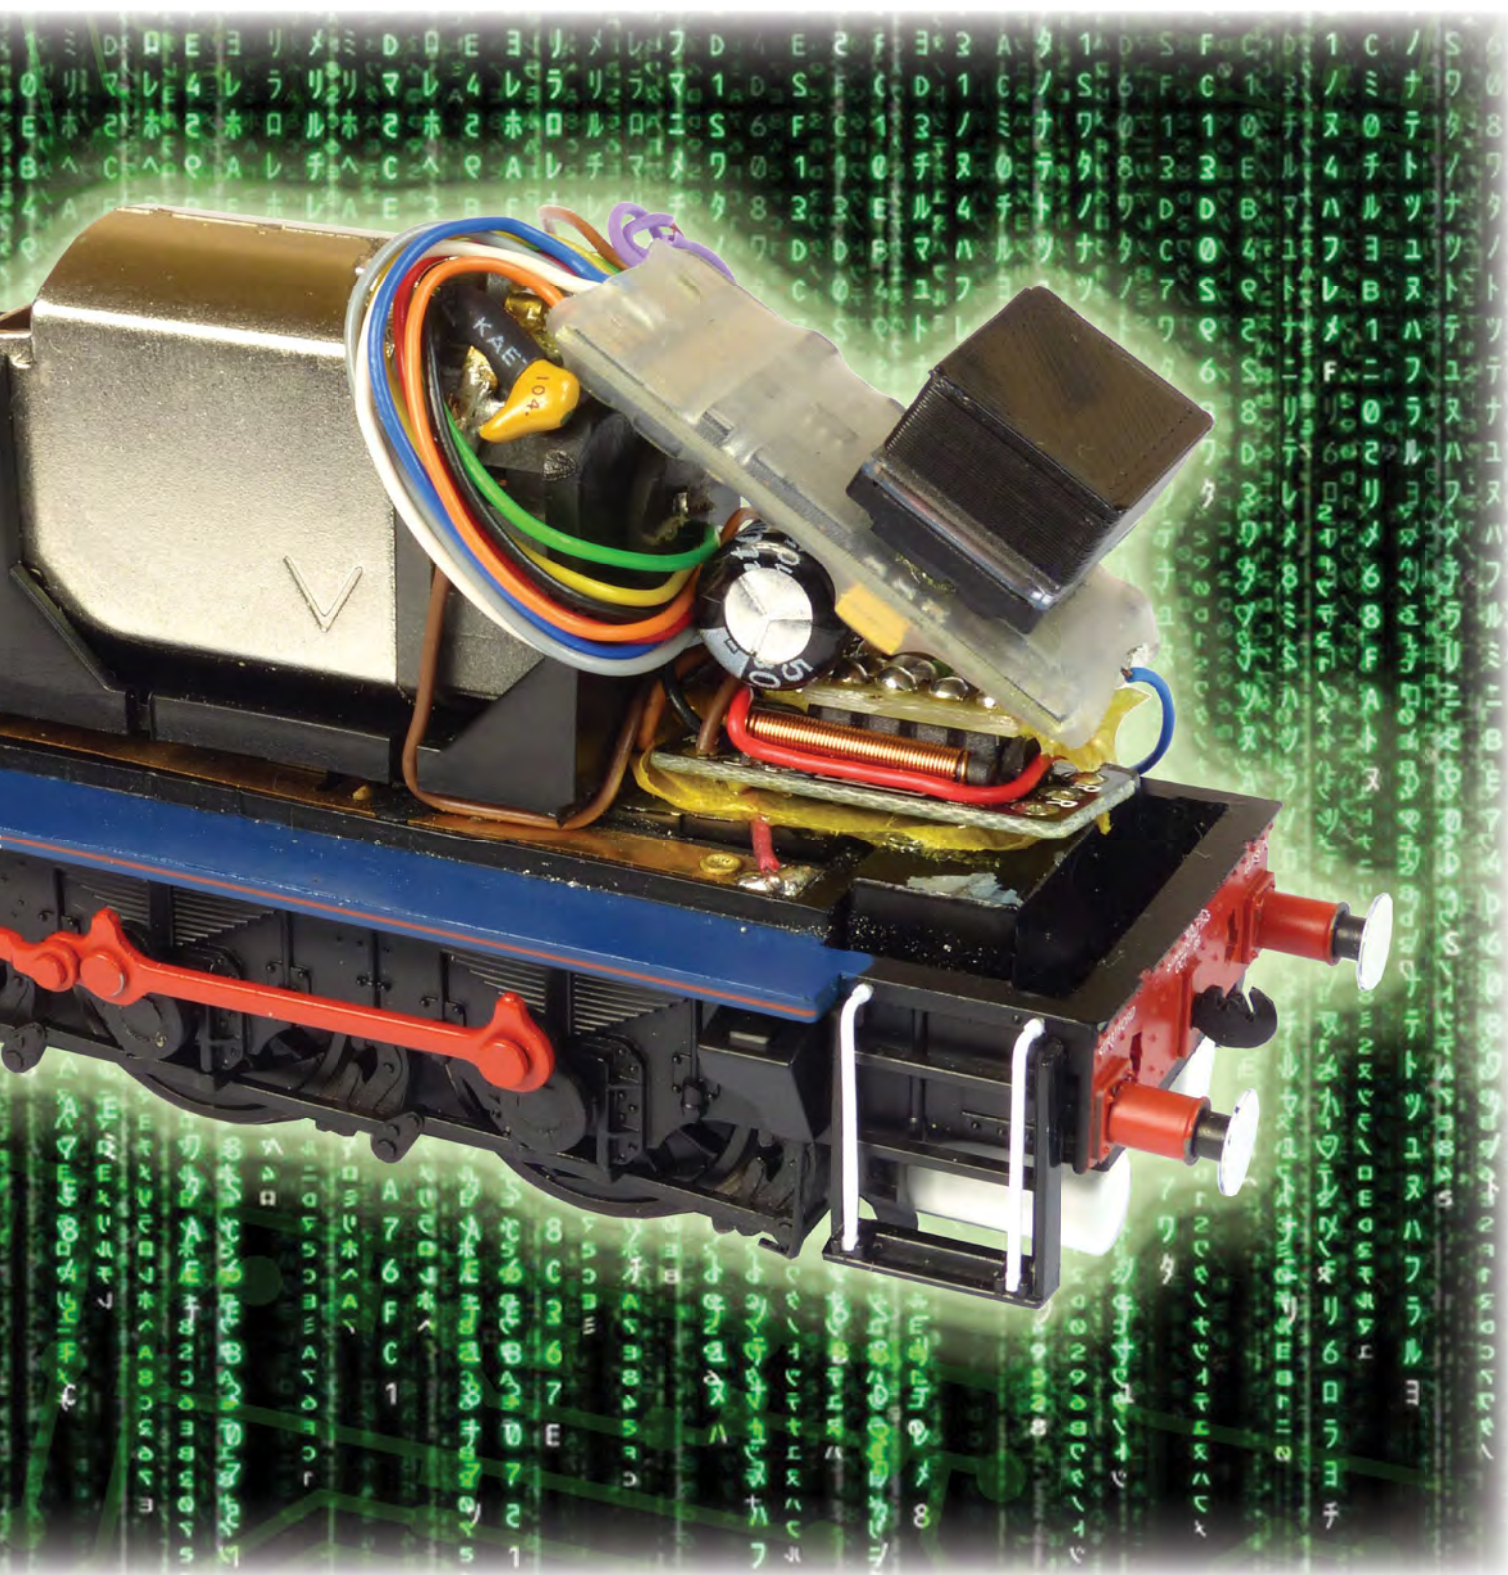

Decoders need a constant supply of power in order to receive signals. On poor or dirty track, and especially with short wheelbase locomotives, this can be a problem. Capacitor circuits known as 'Stay Alives' store power which is released in short bursts to help locomotives cross these gaps. Most high-end decoders support the use of 'stay alives', but the Zimo MX645 has an integrated 'Stay Alive' circuit. A capacitor of your choice can be soldered in place.

and overheat the amplifier on the chip before it either cuts out - if fitted with a thermal cut-out - or burns out. Most DCC decoders handle speakers with an impedance of 8 Ohms, but check first to avoid problems later on.

The maximum output of the decoder - measured in Watts - determines its power rating, although not all of this power can be utilised unless your speaker has the same rating.

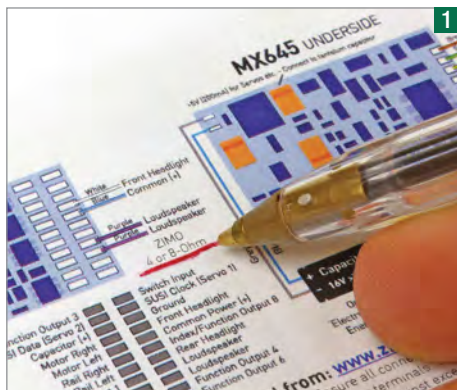

Luckily, most DCC decoders are supplied with speakers, but on the

off-chance that you want to swap the speaker provided for another, be it larger or smaller, check first.

When fitting DCC sound, particularly in smaller locomotives, it's wise to add a 'Stay Alive' device (see left) for extra reliability. ■

Many modellers concentrate solely on decoders when fitting DCC sound, but your choice of speaker makes an audible difference. We now have a much better selection of brands, sizes and shapes of speaker to suit different budgets, scales and models.

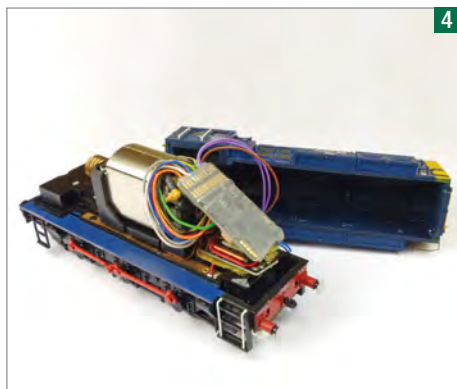

Check your decoder manual for details on the type of speaker you can fit. The Zimo quick guide manual states that the decoder can handle either 4 or 8 Ohm speakers.

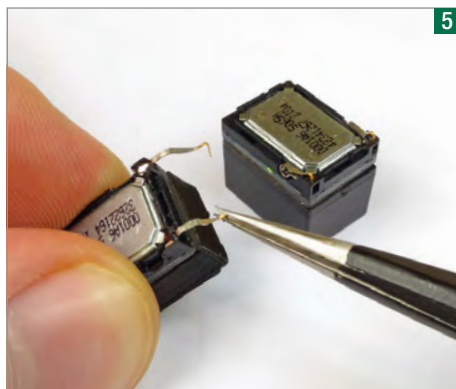

The other page gives details about the decoder speaker output. The Zimo MX645 decoder has a 3W amplifier which for its size is actually quite powerful.

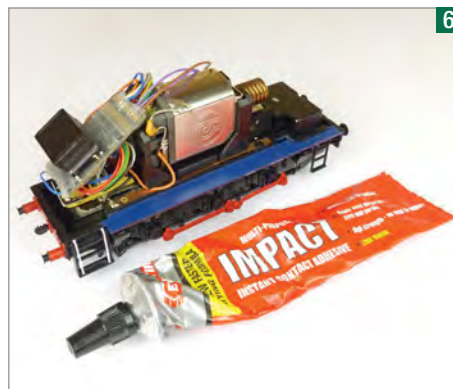

Space is at a premium inside our Class 08. 'Sugar cube' speakers can be fitted in such cases. YouChoos and Zimo stock various sizes to suit such applications.

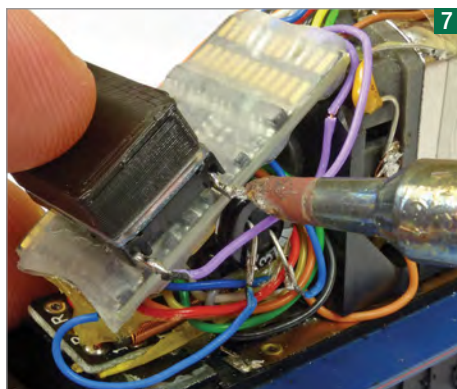

The only way to fit the decoder in is to install it at an angle. Inside the speaker is a magnet, so try to keep it away from the motor as this may cause interference.

I've chosen to use a Zimo LS10X15S loudspeaker. The small sprung terminals are difficult to solder as they are, so I'm carefully teasing them out with fine tweezers.

To fit the speaker, I've no choice but to glue it above the decoder with some multi-purpose contact adhesive. I want to keep the cab empty so I can add lights and crew.

I'm carefully soldering the purple speaker wires into place with a minimum of heat. The speaker case is 3-D printed in plastic, so won't take kindly to a hot iron.

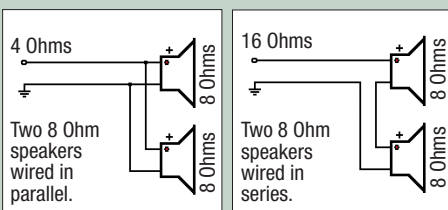

Let's add a capacitor to help the locomotive cross dirty track. The Zimo MX645 has an onboard 'Stay Alive' circuit unlike most decoders - the capacitor is included.

Ready for testing on the rolling road, this little 'Gronk' now has authentic rattles, clanks, bangs and squeals - proof that lack of space doesn't mean you can't have sound.

ask the expert

Q What happens if I want to install more than one speaker into my model? How should I wire them and what difference will it make?

A If the output of one speaker isn't enough you'll need to add another matching one. This will affect the speaker circuit, so to avoid damage, you'll need to follow some rules. Amplifiers like to have a resistance load - as a rule of thumb, avoid going below 8 Ohms.

Wiring speakers in series will double the impedance (the resistance). So, two 8 Ohm speakers

wired in series act as a single 16 Ohm speaker. If you are wiring two speakers, this is the safest choice.

Wiring speakers in parallel halves the impedance. So, two 8 Ohm speakers wired in parallel act as a 4 Ohm speaker. This isn't a problem for the Zimo MX645 I'm using because it can handle the reduced resistance of 4 Ohms. Not all decoders can handle this though, so check first.

**ZIMO decoders are designed and made in Vienna,
home to Beethoven, Mozart, Schubert and Strauss.
Would you risk trusting your sounds to anyone else?**

Products for all scales

DCC decoders suitable for models ranging in size from 'N' to 'O' gauge, and larger, including garden railways.

Incredible specification

Functionality is paramount at ZIMO. Plenty of function outputs are always provided for greater play value.

Unrivalled motor control

Low-noise, high-frequency drive options with back-EMF sampling. Optimal performance from all motor types.

High current ratings

Plenty of capacity provides peace of mind, plus there are thermal cut-outs and overload protection on all outputs.

Superb sound quality

Powerful amplifiers, large memory and high sample rates means sounds need to be heard to be believed.

Stay alive technology

Many decoders incorporate energy storage circuitry that will improve running over poor or dirty trackwork.

Easy software updating

Our decoders can be easily updated with new software without the need to disconnect or disassemble locos.

Worldwide reputation

Chosen by premium brands like Roco & Fleischmann. Widely respected in continental Europe and the USA.

Great value for money

All decoders are made in our own hi-tech production facility in Austria and are surprisingly affordable.

ZIMO has been at the cutting edge of DCC for more than 30 years, offering a range of technologically advanced sound, motor and function decoders.

The pinnacle of digital sound technology...

MX644 & MX645 sound decoders

With 1.2 Amp motor rating, 3 Watt audio amplifier, eight function outputs, built-in 'stay alive' circuitry and the revolutionary 'smart stop' technology, these are the decoders of choice for 4mm scale modellers.

Miniature 'sugar cube' speakers

Matched to ZIMO's pre-wired loudspeaker outputs and designed for the tightest of spaces. Three sizes are available, complete with resonator boxes, right down to an amazingly small 8 x 12 mm footprint!

'Stay alive' supercapacitors

Improve running characteristics and avoid sound interruption and lighting flicker by using an energy storage module wired directly to your decoder. ZIMO's SC68 'Supercapacitor' is the ideal solution.

At the forefront of digital command control since 1979

JERRY CLIFFORD

Andy York talks to the well-known 2mm Finescale modeller and S&D devotee about how he got interested in the line and his 'project of a lifetime'.

Many readers will know of Jerry Clifford's work through his stunning exhibition layouts 'Highbury Colliery' and 'Tucking Mill', or through his role as Chairman of the 2mm Finescale Association. But, these are just the tip of the iceberg for this talented and experienced modelmaker. With the 50th anniversary of the sad closure of the S&D approaching, I visited Jerry to talk about what motivates him and how he is getting on with his latest, and largest, project.

1 Tell us about your 'project of a lifetime', Bath Queen Square.

I built my first version of Bath around three walls of my 15ft by 8ft teenage bedroom, complete with Minitrix 9Fs, Farish 'Black Fives', 'West Countries' and a Compound with the outside cylinders removed to vaguely resemble a 2P!

I've long been attracted by the former Midland and S&D station in Bath which most people will know as Green Park. The Midland, and Bradshaw's, called it Queen Square but BR renamed it in 1952. For me it has everything. It's a reasonably compact joint station with attractive buildings and a wide variety of stock.

It was predominantly a local station but had numerous through workings from the north to the south coast, particularly on summer Saturdays, including a daily named express, the 'Pines'. Goods traffic was also heavy and varied with two yards and two locomotive

"This unique railway slicing through the heart of GWR territory appealed to the rebel in me."

sheds, reflecting the station's joint status.

The current incarnation of Queen Square was, I'm ashamed to say, started about 25 years ago and remains far from finished, although it's only in the last few years that it has had a permanent home in a 20ft by 10ft workshop. This long timespan is partly down to my choosing to set the model in the early-1920s so that almost everything needs to be kit or scratch-built. My being regularly distracted by other projects is also a major factor in its glacial progress!

The idea was always that I would build bits of the layout, buildings, stock, whatever took my fancy and that when the time came it would be like putting a big kit together. This is sort of working out, although I'm now realising just how many more bits there are to make. Still, I'm enjoying the journey even if the destination remains a long way off!

2 What first drew you to model the Somerset & Dorset in 2mm Finescale?

I suppose being local played a part but I do remember one of the first proper railway books I was bought, other than my Ian Allan 'Locoshed' and 'Combined Volumes', was *Steam on the Somerset and Dorset* by G.A. Richardson. Like thousands of other enthusiasts, before and since, the line captivated me with its wide variety of motive power, often double-headed, slogging its way through beautiful countryside. Most of my mates who liked steam were GWR fans so the fact that this unique railway sliced through the heart of Western territory appealed to the rebel in me.

We used to go on regular shopping trips to Bath and it was quite a revelation that there had once been two stations there. I dragged my long suffering Mum off to find the other station which, by the mid-1970s was in a pretty sorry state although much of the goods yard was still there having not long been closed.

3 Why did you choose the pre-Grouping era for this major project?

Oh that's easy. Peter Denny's 'Buckingham', which remains my all-time favourite layout. I loved the elegance of the period, the colourful liveries and the individuality of the numerous companies.

What a sight Bath must have presented with Midland crimson lake and SDJR blue locomotives and stock rubbing shoulders. Throw in the occasional LNWR or LSWR coach and what's not to like, other than years of work to try and reproduce it!

'Buckingham' also made me realise that a reasonably

LEFT: Jerry working 'Highbury Colliery' from his usual position at the front of the layout.

TOP: Jerry's long-term project features Bath Queen Square (as it was prior to 1952) in the pre-Grouping SDJR era.

BOTTOM: Queen Square's delicate train shed roof has been soldered together from hundreds of brass components.

sized terminus with all the facilities could provide everything a modeller needs in terms of operational scope. I also found the Reverend Denny's philosophy of self-reliance liberating in that if I wanted something, the answer was to make it.

4 You scratchbuild all of your structures; how do you go about converting reference sources into plans and what materials do you use to construct the buildings?

For the main station building and roof I managed to get a set of architect's drawings and worked from those. If no drawing is available I generally prepare my own using whatever information I have. Large-scale Ordnance Survey (OS) maps are useful for overall dimensions and much can be gleaned from photographs, particularly if a few dimensions are known. A standard door opening is about 6ft 6in and adult humans tend to be between 5ft 6in and 6ft tall. Of course, if the building still exists, a quick survey with tape measure, notebook and camera is all that is required.

For the models I use plastic card, both plain and embossed, almost exclusively although card and paper also have their uses. Large structures will often have a plywood or thin MDF carcass for strength with a plastic card skin. I like etches for windows if I can find something suitable, otherwise I use a combination of self-adhesive paper labels for the frame with glazing bars scribed onto the clear plastic and filled with paint.

ABOVE: 'Highbury Colliery' can be displayed in SDJR guise, as shown here, or as a 1960s layout with BR green diesels.

I NOVEMBER 20 - Portsmouth - 'Bath Queen Square' demo

I NOVEMBER 27/28 - Warley NEC Show, plastic card structures demo

5 How did you go about modelling the fantastic overall roof of Queen Square?

Building the roof was not as difficult as it looks, although it was a bit of a soldering marathon. The curved main girders and lattice beams are Bill Blackburn etches. I made up simple card and ply jigs and soldered strips either side of these to form 'H' and 'I' sections. The first few strips I cut from sheet brass with a Stanley knife but was rescued from this mind-numbing task by a club member who cut everything I required on his guillotine.

With the 16 main girders fabricated I made another jig on a formica base to assemble the complete roof with the aid of numerous card formers and lumps of Blu-tack. Gradually, as more and more solder joints were completed, what started as a very flimsy structure emerged as a remarkably strong frame ready for the slatted cladding to be added either side and glazing down the centre - jobs that will largely hide around 200 hours of work. Oh well!

6 Exhibition goers may know you for your recent layouts, 'Highbury Colliery' and 'Tucking Mill'; where do these fit into the scheme?

'Highbury' came about because I wanted something small that we could exhibit and would be finished in a reasonable time. There was also the added bonus that any stock built for 'Highbury' could be used on Bath. Coal from the Radstock area of North Somerset was an important source of traffic for the S&D, although 'Highbury', whilst typically North Somerset, is actually based on Camerton which was served by the GWR.

Whilst researching the North Somerset coalfield I became increasingly interested in the other industries in the area and 'Tucking Mill' is partly a result of that, along with a desire to do something with a Colonel Stephens flavour. I came up with the fictional North Somerset Light Railway, an alternative history to the Great Western's Cam Valley line serving the local collieries, quarries and, at Tucking Mill itself, the Fullers Earth works.

So, whilst 'Highbury' can be justified in the grand scheme 'Tucking Mill' and the NSLR are a complete diversion. If, like the good Rev. Denny, I had been more focussed and disciplined, Bath may well have been nearly finished by now!

7 Can you explain the principal differences between 1:152 scale 2FS and N gauge, and what advice can you give to someone wanting to take their first steps into 2mm Finescale?

The fact that 2mm scale and British N are slightly different is one of those unfortunate accidents of history. In truth, the visual difference is minimal, less than 3%, and I, like many 2FS modellers am happy to ignore it. In the past many N gauge models were stretched and distorted to squeeze in a mechanism or make them fit an inappropriate chassis or underframe. Today, things are very different and the quality of models from the likes of Bachmann/Farish and Dapol is stunning.

The principal difference between 2FS and N is in the track and wheel standards. N uses a track gauge of

9mm with comparatively coarse wheels, although these have made huge leaps forward from the 'pizza cutters' of just a few years ago.

2FS uses a track gauge of 9.42mm and much finer track and wheel standards with a consequent vast improvement in appearance and performance, particularly over the all-important points and crossings. Dimensions to two decimal places may sound demanding but the 2mm Association produces a comprehensive set of jigs and gauges along with 'Easitrac' plain track and a growing range of point kits.

In addition, the Association also produces drop-in wheelsets for many of the latest Graham Farish diesels as well as stock for them to haul, making conversion possible in a matter of minutes. It also offers a wheel turning service for those not covered by the drop-in range.

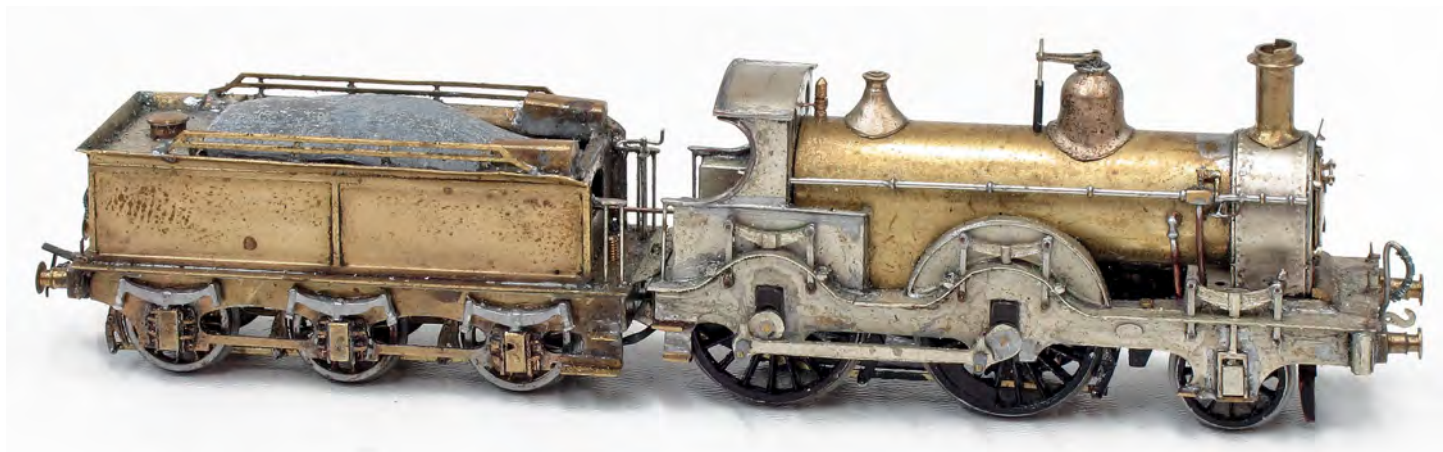

Steam is now also catered for with drop-in conversion kits for the latest Farish 'Jinty' and 4F 0-6-0s as well as replacement chassis kits for many others.

My advice to anyone who fancies giving 2FS a try is first to join the Association and seek out one of the many area groups up and down the country. Then start with something simple, a small micro-layout with one or two points, a yard or so of track and a converted locomotive.

If the smooth passage of the finer wheels through pointwork appeals then move on to one of the comprehensive range of wagon kits available and eventually, a replacement locomotive chassis. There is no denying that working to 2FS is more demanding than N but it is hugely satisfying.

BELOW: 'Tucking Mill' depicts the fictitious North Somerset Light Railway, a country railway with a Colonel Stephens flavour.

8 You hand-paint your backscenes which complement the layouts beautifully. What materials do you use?

I have a bit of a thing about backscenes. I think they are vitally important in any scale, but particularly so in N/2mm, where the individual models are so small. Their job is to focus the viewer's attention on the model and help blot out any distractions and other visual noise. I'm always very flattered by comments I receive about my backscenes, but I'm certainly no artist, I follow the methods taught to me by John Birkett-Smith ('Totnes', 'Ashburton') whose backscenes truly are works of art.

The basis is a sky board, as tall as possible, in smooth hardboard or MDF, curved at the rear corners to ensure there is no shadow. Just in front of this is the landscape board, again in thin MDF, cut to follow the profile of the horizon. The scene itself is copied from photographs. These can be printed out in black and white at fairly low resolution as they are simply a guide. All painting is done using good quality acrylics and artist's brushes using a fairly limited palette.

For grass I use sap green and yellow ochre with a touch of raw sienna and lots of white. For trees I use hookers green and burnt sienna with a touch of blue for the deep shadows, adding yellow ochre and white for the highlights. As distance increases tonal contrasts reduce and colours move toward the blue/violet and become much paler.

ABOVE: A scratchbuilt Midland Railway Kirtley 2-4-0 destined for use on 'Bath Queen Square'.

BELOW: Queen Square's distinctive station building - compare it with the 4mm scale version on page 31.

Paint is applied in thin washes or 'glazes' and gradually built up, trying to avoid any texture. John's advice when buying paint was get twice as much white as any other colour! My advice would be, as with all modelling tasks, take inspiration from the real thing. Observation is key.

9 You undertake modelling work as a professional too; what sort of projects have you tackled?

I've been doing bits of commission work for over 20 years now, but have been full time for about six. As some wag once said, if you want to make a small fortune as a professional modelmaker, start with a big one!

I'm incredibly lucky to be able to do something I enjoy for a living and over the past few years have worked on all sorts of projects. I've built several complete layouts ranging from big trainsets to scale models of actual locations, including a couple of S&D subjects. I've also built locomotives in all the popular scales from 2mm to 7mm - including 3mm - but, so far, nothing in S scale.

In addition, I do the DCC decoder fitting and provide a repair service for my local model shop, The Gas Cupboard in Trowbridge, run by my old school mate Dave Simpson.

10 You attend shows as a demonstrator as well as exhibiting the layouts; is there an increasing interest in 2mm Finescale?

Demonstrating at shows is something we enjoy - spending the day with my wife Kim and chatting to fellow enthusiasts is great fun, although it can be hard on the vocal chords!

There is no doubt that there is an increasing interest in 2FS. I would put this down to three key factors. Firstly, the growing number of finescale layouts on the circuit, demonstrating just what is possible. Secondly, the huge leap in quality of N in the last decade or so has had a major impact and finally, the fantastic work carried out by the products team of the 2mm Scale Association. Innovations such as Easitrac and drop-in wheels for both steam and diesel have made the scale so much more accessible and encourage modellers to give it a go.

Interestingly, in my experience, the majority of newcomers to 2FS are from the larger scales looking to exploit the scenic possibilities. The 2mm scales, both 2FS and N, cannot offer mass but there is no better way to present the railway in the landscape. To that end I'm currently working on a book for Wild Swan entitled *Railways in the Landscape: Modelling in the 2mm Scales*. ■

Cobalt 90° Adapter

**The simplest way to reduce mount depth
& increase Cobalt installation versatility.**

Cobalt iP Digital & the Cobalt family are already the easiest-to-install and most reliable turnout motors available, but now and again, modellers who are short of space or between-baseboard headroom have asked us if we were able to find a way for them to mount them differently.

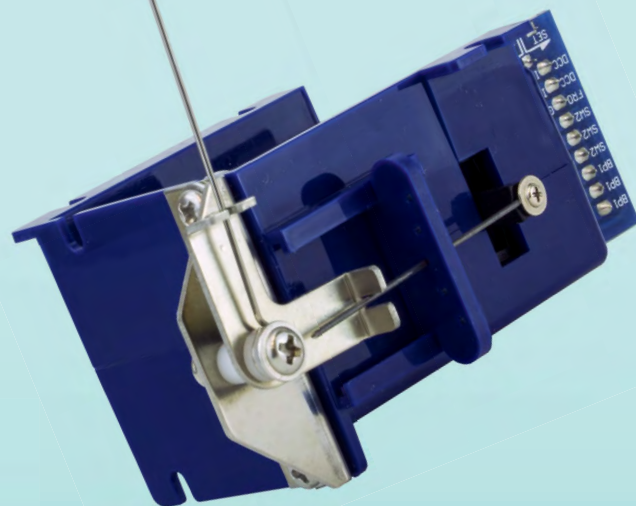

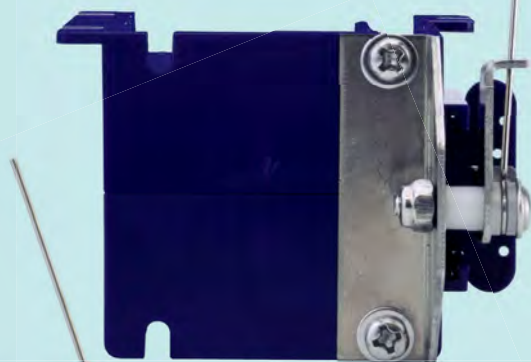

We listened... and Cobalt DCP-RA3 is our answer.

Packed in 3's and provided with all of the nuts and bolts you will need to mount them, these economical all-metal mounting adapters are simple to fix onto the mount points you would normally use for under-board installation...

Once they are mounted, Cobalt's drive system is rotated 90 degrees and its mount depth is reduced to a comfortable 40mm... a reduction of 27mm compared to a standard installation!

Cobalt is then secured to the baseboard with the screws provided... using the alternative mount positions that we had already built-in!

Easy to use - and effective!

TOP TIP:

The Cobalt 90° mounting adapters are also very useful for assisting you with above-board mounting of Cobalt motors in your fiddle yards and hidden areas.

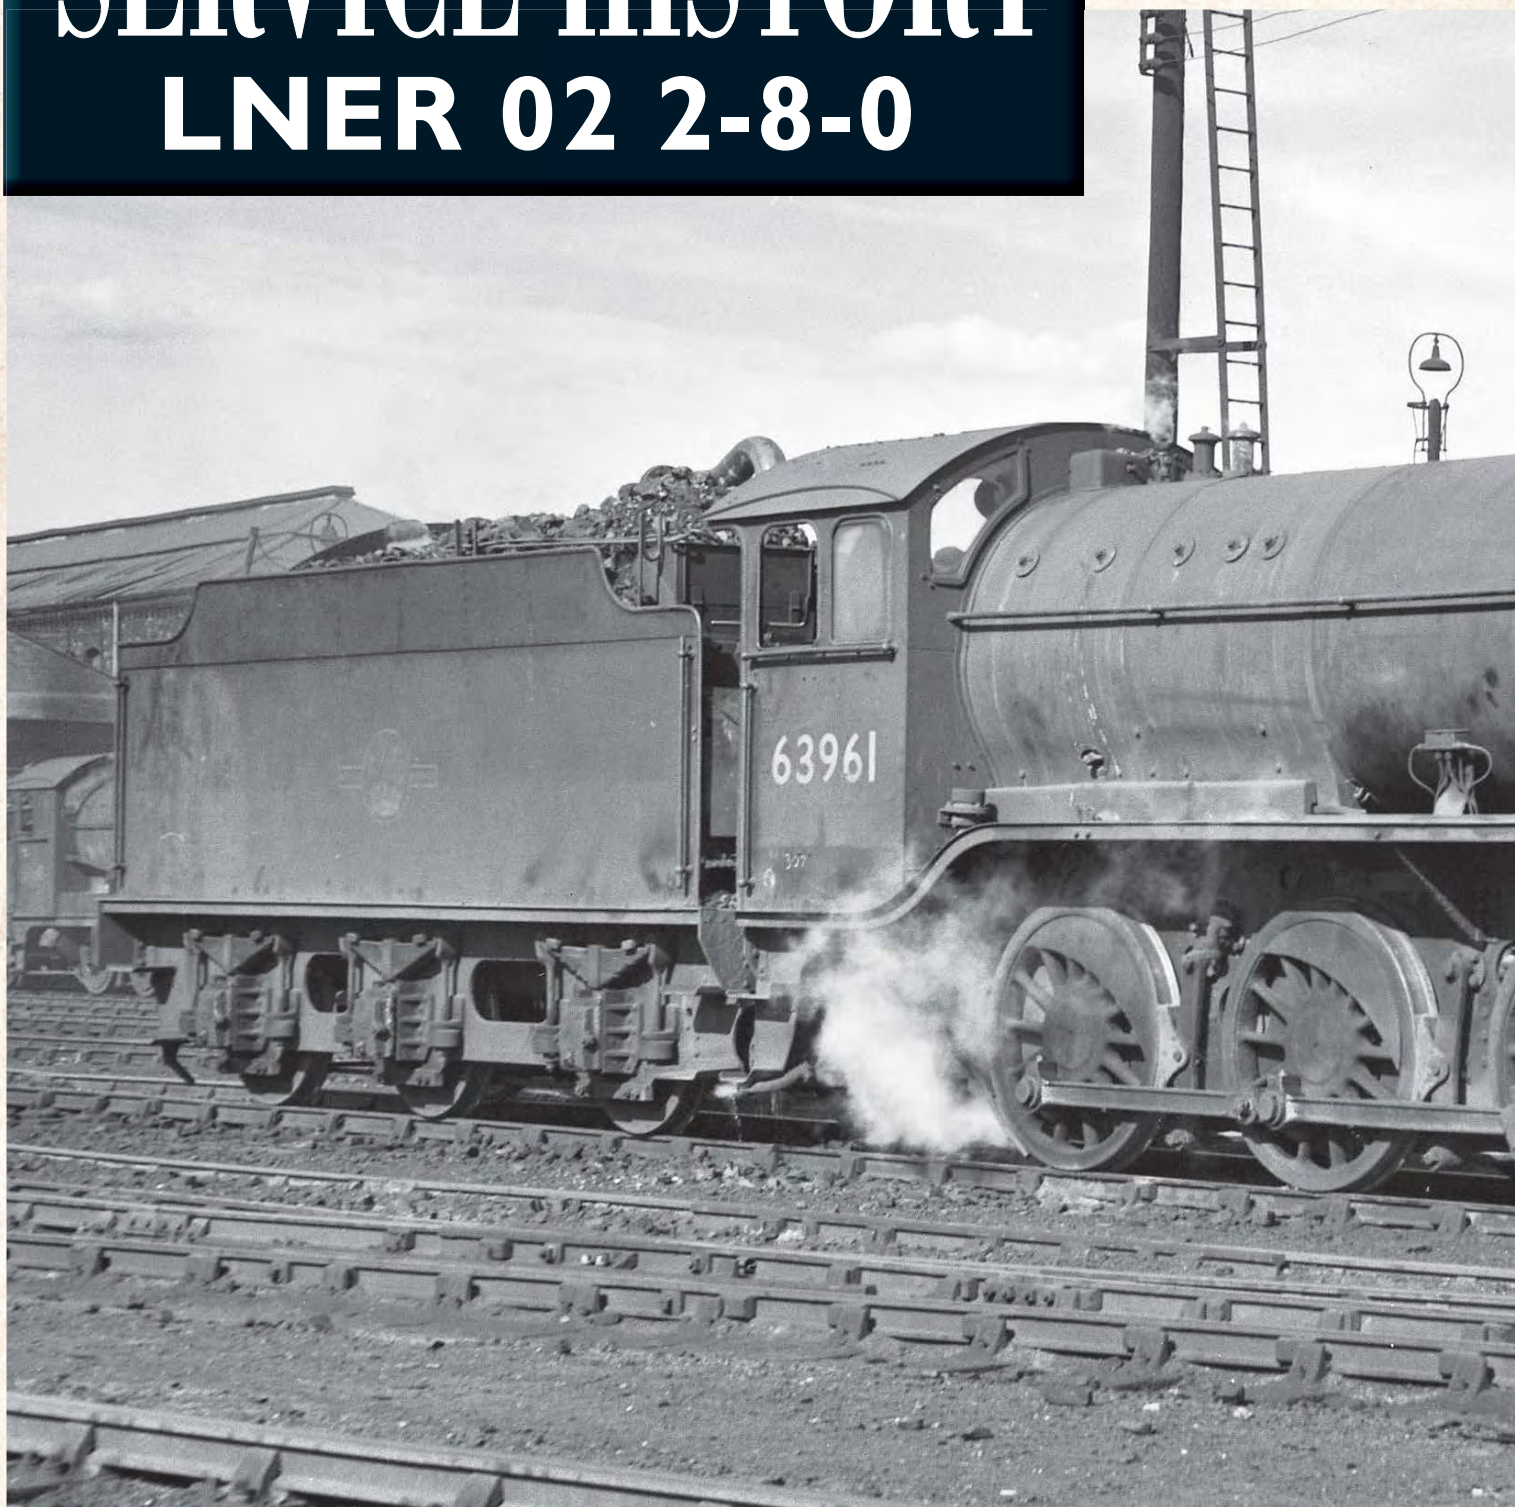

Cobalt point motors and all other DCCconcepts products are distributed world-wide by DCCconcepts Pty. Ltd

SERVICE HISTORY

LNER 02 2-8-0

With several batches built over a 25-year period, Nigel Gresley's heavy mineral machines have a complicated history. Luckily, *Tony Wright* is on hand to explain the many differences and modifications made over the years.

The first of Gresley's three-cylinder 2-8-0 freight locomotives was completed by the Great Northern Railway at Doncaster Works in May 1918. It featured three inclined cylinders, a rocking shaft to actuate the inside valve gear, large-diameter pony wheels, a long central running plate, Ramsbottom safety valves and tall

boiler fittings and cab. The latter were made possible by the GNR's more generous loading gauge compared to other parts of what would later become the LNER. It was classified O2 and was a large, modern, ground-breaking machine compared to the many types of goods 0-6-0s that had preceded it.

In fact, although it was a development of the O1 2-8-0, No. 461 was much more significant in being the first Gresley locomotive to employ three-cylinders with conjugated valve gear, an arrangement that would go on to be used in much more famous classes, including the

K3 2-6-0, A1/A3 and A4 'Pacifics' and the V2 2-6-2s.

Though successful, it remained a one-off until a further ten locomotives were built by North British in 1921. These differed in having less-inclined cylinders, simplified conjugated valve gear, small diameter pony wheels and Ross 'pop' safety valves. However, the tall GNR fittings were retained. These were classified O2/1.

Soon after the Grouping in 1923, a further 15 O2s were ordered, built to the lower composite LNER loading gauge. The cab roof profile was altered, the whistle repositioned on the firebox rather than the

ABOVE: Brewing up at Doncaster 'Carr Loco' shed on September 26 1959, No. 63961 is an O2/4 with an LNER Group Standard 4,200gal tender and 100A boiler. Heljan is producing an O2/4 in its first batch of models.

cab roof and a shorter chimney was fitted. These were classified O2/2. All the three types had GNR-style cabs without side windows, short-travel valves, right-hand drive and GNR pattern tenders, albeit with small detail variations amongst them.

Between 1932 and 1934 a further 16 locomotives were built. These differed substantially from the earlier examples in having left-hand drive, long-travel valves (necessitating a raising of the central running plate section), larger side-window cabs, a lower dome (to clear the restrictive ex-Great Eastern Railway

SERVICE HISTORY

LNER O2 2-8-0

ABOVE: With its small cab and tender, O2/2 No. 63935 presents a more traditional GNR look at Doncaster shed on May 5 1957. This second batch of O2s was built to the composite LNER loading gauge, which allowed them to work beyond former GNR routes which had more generous clearances.

BELOW: Just to confuse matters, No. 63922 is an O2/1 with a Gresley boiler and GN tender but with a later style side-window cab. Coupled behind at Doncaster depot on September 26, 1959, is an ex-works No. 70000 *Britannia*.

loading gauge), steam brakes (instead of vacuum), cut-away portions to the bottom corners of their front bufferbeams and larger capacity Group Standard (GS) 4,200gal tenders, both stepped-out and flush-sided. These were classified O2/3.

A further 25 O2/3s were built in 1942/43, but reverted to vacuum brake on locomotive and tender. Both types of GS tender were fitted. In 1939 a decision was made to lower the fittings of the original O2 and O2/1s, in both cases a side-window cab was added although GNR tenders were retained.

In 1943 Edward Thompson (the new LNER Chief

Mechanical Engineer) fitted his standard 100A (B1) boiler to an O2/1, reclassifying it as O2/4. The shorter boiler required an extra saddle to support it and the smokebox was extended backwards to fit the snifting valve. Right-hand drive was retained, but the vacuum ejector pipe was fitted above the boiler handrail rather than behind it. An O2/3 was converted in 1944 to O2/4 and then it was left to BR to fit a further 28 O2s (of all sub-classes) with B1-type boilers.

All conversions were classified O2/4 whatever their origin and all had the vacuum ejector pipe above the handrail whether right or left-hand drive. BR

Automatic Warning System (AWS) was fitted to several locomotives towards the end of their lives and in 1961/62 seven O2s had their GNR tenders replaced by GS tenders from withdrawn K3 2-6-0s.

LIVERY HISTORY

The GNR-built O2s were turned out in grey with white lining. From 1923, LNER black with red lining was applied, initially with the numbers on the tender. From 1928, lining was abandoned and the numbers appeared on the cabsides. Various styles of 'LNER' lettering and numerals could be observed over the years and during the Second World War just 'NE' was applied to the tenders. British Railways painted the whole class plain black and added the usual mix of ownership brandings on the tender, gradually settling down to the early emblem from 1948-56 and the late crest thereafter. With the exception of the original O2, all received BR smokebox door numberplates.

As is usual with LNER numbering, there was a rather jumbled selection, filling gaps in the sequence as required. The numbering went in four series; Nos. 3461-3501 (built 1918-24), 2954-61 (built 1932), 2430-37 (built 1933/34) and 3833-57 (built 1942/43). In 1946 the LNER rearranged the numbers in order of build from Nos. 3921-87. BR then added 60,000 to the LNER's 1946 numbers.

These elegant, powerful goods locomotives saw widespread service on the ex-GNR East Coast Main Line and many routes across the East Midlands,

complementary models

Designed to haul heavy mineral trains loaded with coal or ironstone, the O2s spent their lives dragging long rakes of unfitted open wagons between collieries, quarries and marshalling yards. From the 1920s until the early-1950s, these would largely have consisted of wooden-bodied five, seven and eight-plank wagons in a myriad of private owner (PO) liveries. Many models of suitable PO wagons are offered in OO gauge by Bachmann, Dapol, Oxford Rail and Hornby. If you're looking for something more specific to a particular area, many more wagons are available as kits from the likes of Cambrian, Slater's and Parkside Dundas.

However, from the late-1940s, steel-bodied LNER/BR mineral wagons began to be filtered into service, gradually replacing the wooden-bodied vehicles absorbed by BR when the 'Big Four' railway companies were nationalised in 1948. Most numerous of these were the 16t wagons with side and end doors, several types of which are produced by Bachmann with either vertical or sloping sides. Several other variants are available in kit form from Parkside Dundas. Steadily throughout the 1950s the balance between wooden and steel-bodied mineral wagons changed and by the early-1960s the older types had been almost entirely phased out of regular service.

Particularly appropriate for BR O2s are the Bachmann and Hornby 27t steel-bodied trippers, as used on ironstone traffic from the 1950s until the use of domestic iron ore died out in the mid-1970s. But, the class wasn't entirely limited to unfitted mineral trains. Photographs also show O2s on general merchandise trains (both fitted and unfitted) and steel trains, amongst others.

An important feature for any O2-hauled train is a brake van, and several good RTR vehicles are available to accompany Heljan's new model. Both the short type of LNER 'Toad' and the longer 20t version which eventually became BR's standard goods brake van are available from Bachmann. Hornby also offers an excellent model of the latter in its BR form. Kits are also offered by Dapol (ex-Airfix), Parkside Dundas and Cooper Craft for alternative versions.

From a situation a few years ago, where no LNER/ER 2-8-0s were available in RTR form, we now have Heljan's O2 joining an impressive line-up which features Bachmann's Robinson O4 and 'Austerity' and the Thompson O1 from Hornby. Heljan's choice gives LNER/ER modellers another heavy goods option as well as a first RTR depiction of this powerful, ground-breaking Gresley design.

Another variation on the O2/4 theme takes water at Frodingham shed in Scunthorpe on September 26 1959. No. 63945 has been rebuilt with an LNER 100A boiler (like the O4/8 alongside) but retains a GNR style tender.

SERVICE HISTORY

LNER O2 2-8-0

RIGHT: The sheer filth and neglect of the final years of BR steam is almost palpable in this view of Retford (GC) shed yard on September 22, 1962. O2/2 No. 63936 heads a collection of ex-LNER types, including ex-GC and GN 2-8-0s, a B1 and what appears to be a withdrawn V2. The O2 is AWS-fitted and has received OHLE warning flashes.

W. SKINNER

MIDDLE: A further tender variation was the flared top version of the LNER Group Standard 4,200gal type, as attached to No. 63961.

BELOW: Grantham was home to many O2s, providing power for ironstone trains from pits on the High Dyke branch. This July 1963 view of Nos. 63987 and 63941 shows both GNR and LNER cabs. No. 63987 is fitted with AWS - note the battery box under the cab and the magnet protection plate holding up the screw-link coupler.

Yorkshire and Lincolnshire, ex-GER main lines across East Anglia and ex-Great Central routes, particularly in the East Midlands. They could also be observed on ex-North Eastern Railway (NER) lines and occasionally even as far north as Edinburgh.

In LNER days they formed the backbone of the heavy coal runs at the southern end of the ECML and via the GN&GE Joint and ex-GER lines to London. Post-war their use on the main line south of Peterborough diminished with the advent of 'Austerity' 2-8-0s and ultimately BR 9Fs, but they still saw widespread use in Lincolnshire, Nottinghamshire and South Yorkshire.

A particular stronghold was Grantham, where O2s monopolised ironstone workings from the High Dyke branch to Scunthorpe's steelworks for decades,

C.J.B. SANDERSON, COURTESY DAVID DUNN

serving pits at Colsterworth, Stainby and Sproxtton. They were fitted with tablet catchers on their tenders for negotiating the long single-track branch. Other sheds with significant allocations in the BR era included Frodingham (Scunthorpe), Doncaster and Mexborough, serving the all-important coal and steel industries in those areas. However, O2s were also recorded at locations as varied as Bridlington, Tyneside and even on the Northallerton-Hawes line on one occasion in 1957.

GNR pioneer No. 461 (LNER No. 3921) was withdrawn in 1948, but all the others continued in service until the 1960s. No fewer than 40 were withdrawn in 1963, with the final five soldiering on until November of that year. A year later, several were still to be seen dumped, but they ran no more. Sadly, none were saved for future generations to admire. ■

A GREAT DAY OUT FOR ALL RAILWAY MODELLERS

Come and find out why so many railway modellers are turning to O gauge for smoother running, better detail and more realism

BURNHAM-ON-SEA

Although best-known for its main line over the Mendips, the S&D's first ambition was to reach the Bristol Channel and tap into coastal traffic, as **Andy York** finds out.

In the December 2011 issue of **BRM** Alistair Knox described his making of 'Burnham-on-Sea' in N gauge; a compressed but recognisable interpretation of the Somerset & Dorset Joint Railway's coastal venture.

The railway ran as far as Highbridge Wharf by 1854 but significant goods income encouraged extension westwards in search of greater passenger and goods receipts through access to shipping along and across the Bristol Channel to South Wales. The railway ran onto a 900ft long slipway sloping down at 1-in-21 to allow access alongside steam ships (see below). Goods wagons were wire-rope worked onto the slipway whilst passengers had a clear walking route to the station whose buffers reached the Esplanade.

The slipway's construction cost £20,000, but the expected traffic did not really materialise after opening in 1858. Once the Bath Extension opened from Evercreech Junction to Bath in 1874 the line

to Highbridge and Burnham became very much the branch to the new main line. Steamers to Cardiff ceased in 1888 and thus the branch to Burnham settled into a quiet life serving local trade and holidaymakers to the resort.

The cost of expanding the Somerset & Dorset Joint Railway's routes left no money to operate the railway and so the line was leased jointly to the Midland Railway and the London & South Western Railway, who set up a Joint Committee to run it. Put simply, the L&SWR looked after the infrastructure whilst the Midland provided the locomotives and rolling stock. After the Grouping into the 'Big Four' in 1923 the arrangement effectively continued with the LMS providing the stock and the Southern responsible for the engineering, track and signalling.

Alistair sets his scene of Burnham in the post-1923 period; an interesting time for followers of the Somerset & Dorset. The smart Prussian Blue livery for passenger locomotives persisted until around 1930 before the simple black livery of the LMS started to take over. Although Southern and BR(S) locomotives may have been seen on the Wimborne to Bath line they were not known to operate on the branch to Highbridge and Burnham.

Burnham-on-Sea's original station was a short single platform with trainshed over part of the platform road. The longer 'excursion' platform was added later when visitor traffic started to increase. A small goods yard and goods shed completed the town's railway facilities. There was no locomotive shed as the S&DJR's main depot was only a mile and a half away at Highbridge.

Re-creating the trackplan of the real location in model form therefore gives a simple but interesting layout which is operationally entertaining and could be made more taxing by re-creating a busy summer Saturday in a relatively small area.

The scenic boards are angled to include the gentle curvature of the line's formation and Peco Code 55 track has been used with large radius points apart from

Burnham-on-Sea, the railway brought you prosperity a century ago. In ten years time when the roads are so full of traffic we'll all be going by train again. You'll be grateful you still have a railway to your town, don't let Doctor Beeching take it away from you.

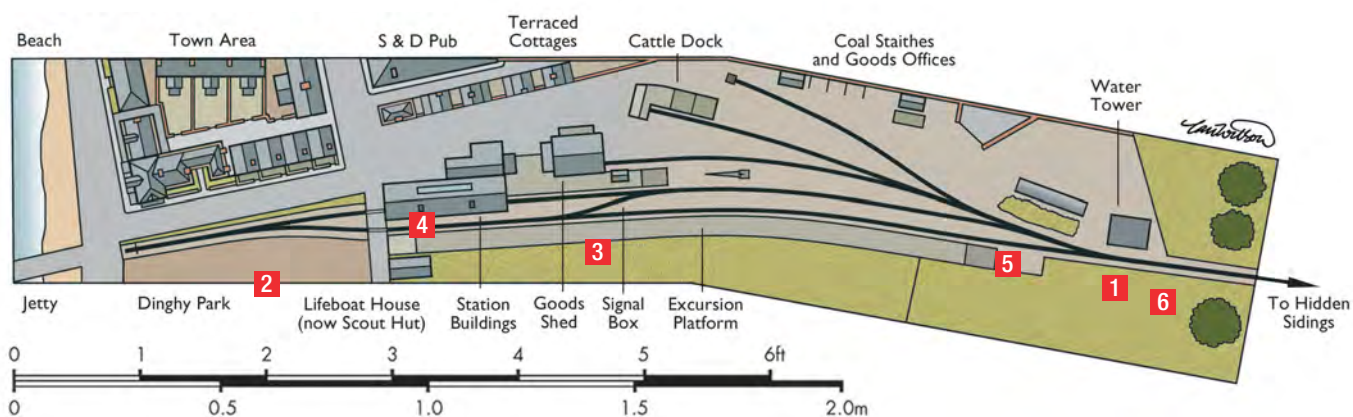

John Betjeman, Branch Line Railway, 1962

TRACKPLAN BURNHAM-ON-SEA

Lambertson

Alistair is taking the layout to the Taunton Model Railway Group's open weekend at Bishops Lydeard station on the West Somerset Railway on March 11/12 where you will also be able to see 'Bath Green Park' as featured on page 22.

3

one medium radius point in the goods yard.

Off-scene there are two interchangeable traverser plates, each with six roads which means a wide variety of trains can be prepared. Intelligently, Alistair also has a short test track to run locomotives in before use on the layout at exhibitions, stock will always run more reliably if it has been checked before running in public.

SCENIC MATTERS

The town scene of the layout is a great representation of the site with many recognisable buildings set out to reflect the positioning relative to the railway including the aptly named Somerset and Dorset Hotel. The most distinctive building is the Queens Hotel which sits on the Esplanade at the head of the shortened slipway which was made by Ken Ball for Alistair. Low relief buildings along the backscene are a mixture of adapted Metcalfe kits and scratchbuilt plastic card based structures.

ABOVE: An ex-Midland 3F rolls in with LMS/LNER vans, possibly delivering racing pigeons to Burnham for their next race.

OPPOSITE: With the Bristol Channel as a backdrop, Stanier 2P 0-4-4T No. 6402 pauses in the headshunt before running around its train.

RIGHT: The Somerset & Dorset Hotel occupies a prime location at the end of the street.

4

ask the expert

Q How easy is it to assemble a realistic fleet of N scale locomotives and rolling stock to model S&D operations in the LMS/early BR era?

A Alistair's locomotives include a mix of re-liveried Graham Farish 4F 0-6-0s, 2P 4-4-0s and 'Jinties' (known as 'Bagnalls' on the S&D), Union Mills 2P and 3F locomotives, a Peco 'Jubilee' 4-6-0 adapted to become a 'Black Five'. The exception to the RTR 'rule' is a delightful hand-built LMS 0-4-4T built by John Greenwood. Coaching stock is an appropriate mixture of modified Graham Farish plus Ultima and N Gauge Society kits.

The beach and sea are sculpted with Pollyfilla, painted with poster paints and the sea varnished. The pier is truncated, it was used previously not only for shipping but also to launch the lifeboat, down the rails inset to take wagons to the ships. In the period modelled the lifeboat station was no longer used for its original purpose and had become the headquarters of the 3rd Burnham-on-Sea Scouts. The track is removed through where he has modelled the boat yard.

ABOVE: Sandwiched between two driving trailers, a Fowler 3F 0-6-0T powers the Highbridge branch shuttle.

BELOW: An LMS 4F on branch goods duty.

Regular trains to Burnham-on-Sea finished in 1951 with a few specials running until 1962. Irregular goods traffic continued until the line finally closed, along with the rest of the Somerset & Dorset on March 7 1966.

John Betjeman rode the branch from Evercreech to Burnham in a wonderful BBC documentary *Branch Line Railway* filmed in 1962. His typically superb narrative delivery can be enjoyed online at www.brmm.ag/BetjemanDocumentary ■

BLANDFORD FORUM

Andy York visits an award-winning layout built to give museum visitors an authentic sense of how this Dorset market town looked 50 years ago, before its railway was closed.

Maybe we cannot take the slow train to Blandford Forum today but it is possible for visitors to Blandford Town Museum to see what the railway looked like before it closed. If you are ever near the fine market town of Blandford it is certainly worth a visit, not just to see the model, but to absorb the railwayana and the history of this part of the Somerset & Dorset.

A group of local railway modellers joined forces in 2006 to form the Blandford Museum Railway Club. Their aim was to create a realistic representation of the station environment - within space limitations - and record the educational and historic value of the scene. More than a year's research, utilising plans, diagrams, large scale maps and old photographs allowed the group to build up a picture demonstrating not only the railway but the traffic and associated businesses once active in this Dorset agricultural centre.

As a real community project with funding assistance from the town's museum trust, the project has brought forth further reference material from local historians and photographers. A general appeal was made for local people who worked on or around the railway and passengers who used the trains. This solicited a positive input and in this article we show that the model gives a good idea of how the railway looked in the post-Nationalisation years. Thanks to photographers such as John Blanchard and Tim Chapman, we also have a permanent record of the S&D at Blandford in those years, which was made available to the club and museum.

COUNTRY LIFE

Much of the goods traffic to and from Blandford was agricultural. In the yard we see the cattle docks which were well used at weekly livestock markets and the buildings of Blandford & Webb Ltd, a well-known local agricultural merchants. It took deliveries of animal feedstuffs from ports such as Avonmouth for local distribution.

PHOTOGRAPHY

Andy York/Blandford Museum Railway Club

RIGHT: One of the many charms of the S&D was its combination of Southern and Midland locomotives working inter-regional expresses - exemplified by this 2P and Bulleid 'West Country' heading south.

RIGHT: As a largely rural community, Blandford took in deliveries of fertiliser, animal feeds and coal by rail, sending fresh produce and livestock out to markets in cities such as Bristol.

The large brick-built building was a railway-owned corn store where seed was processed and prepared for local farms. Four coal merchants accepted deliveries by rail through the yard or via the coal yard spur adjacent to the main platform. The yard includes a stable block where five horses rested after local delivery work and one used for yard-shunting work.

The model occupies a prominent position behind protective screens on the first floor of the museum. It can function as an operating exhibit even if none of the club members are present thanks to its automatic sequencing; a motor-driven 25-way switching

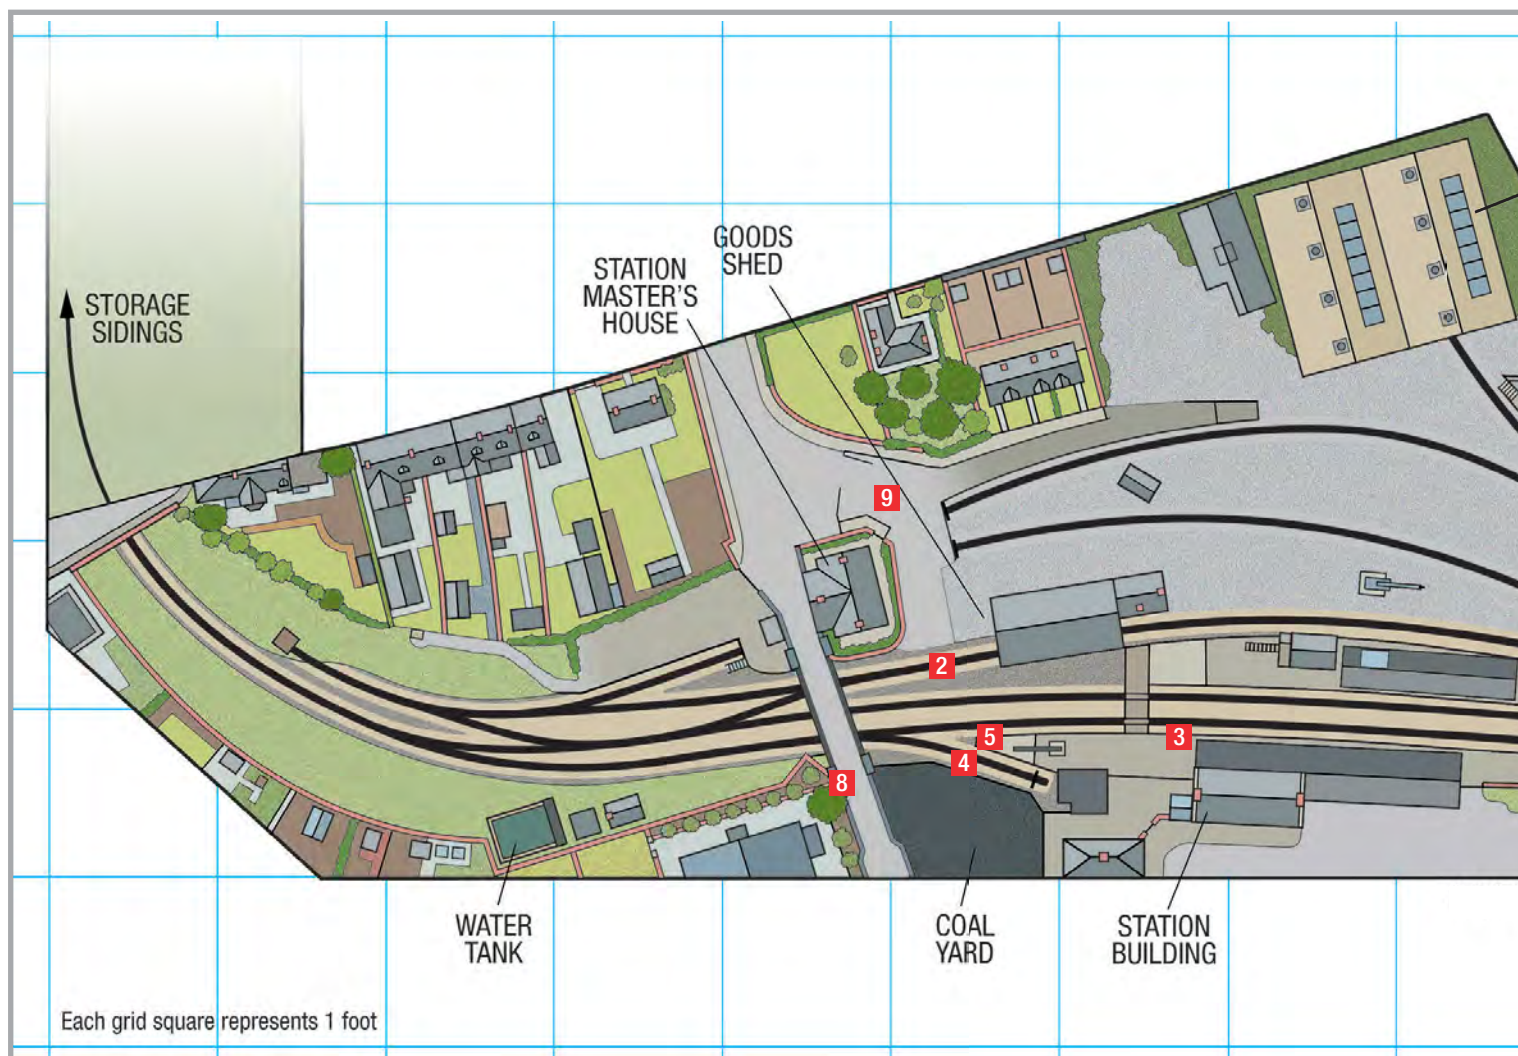

mechanism setting routes, which trains run, whether they stop and where, all using DC control.

The switch moves to the next operation when the preceding move is complete which means if there's a failure due to a train stalling or derailment, operations are suspended until a steward can attend. Similarly when the museum closes, the layout can be switched off and the sequence resumes the next day.

Use of Code 100 track increases reliability and also allows for the maximum compatibility with club members' own stock. Points are controlled by slow-action Tortoise point motors and there are three controllers for Up, Down and goods yard operations. The controllers were built to the group's own design incorporating automatic acceleration and deceleration which means that automatic operation is suitably smooth in presentation, unlike many museum layouts.

Many of the trains seen on the layout have been formed to re-create known workings and include the correct types of rolling stock based on the photographs. The signals are true representations of the types used and were assembled from Model Signal Engineering components.

The model includes representative workings of the line in the BR period. Up and Down inter-regional and local passenger trains including the 'Pines Express'

Q How did the railway through Blandford Forum develop in the 19th and 20th centuries?

the years after the Second World War when more holidaymakers could travel from northern England to the south coast via the S&D but prior to increased car ownership eating into that traffic. Although passenger services through Blandford ceased on March 5, 1966, the railway survived longer here than most of the rest of the route with goods trains to Blandford yard continuing until the end of 1968. Demolition of the station and yard came in 1970 and thus ended more than 100 years of the railway here.

town history

Blandford Forum has one of the finest small town Georgian centres in England, built after a devastating fire in 1731 which levelled virtually every building. Down a short alleyway, Bere's Yard, is Blandford Town Museum which occupies a stable block and workshop used by architects and master builders, the Bastard brothers, who were responsible for much of the fine design and building in the town's rebirth.

The museum contains many high-quality exhibits including the nameplates of the eponymous Bulleid 'West Country' No. 34107. There are fascinating records of the military presence around the town, anti-invasion measures and the military camp railway constructed in 1918 by McAlpines for the Air Ministry.

ABOVE: Fowler 3F 0-6-0T No. 47316 pauses with a brake van while working a local goods trip.

LEFT: All buildings have been built from scratch, based on period photographs, scaling and, where possible, original plans.

The generous loan of locomotives and stock by club members and donations from the public have been invaluable in allowing us to run a wide selection of realistic S&D trains.

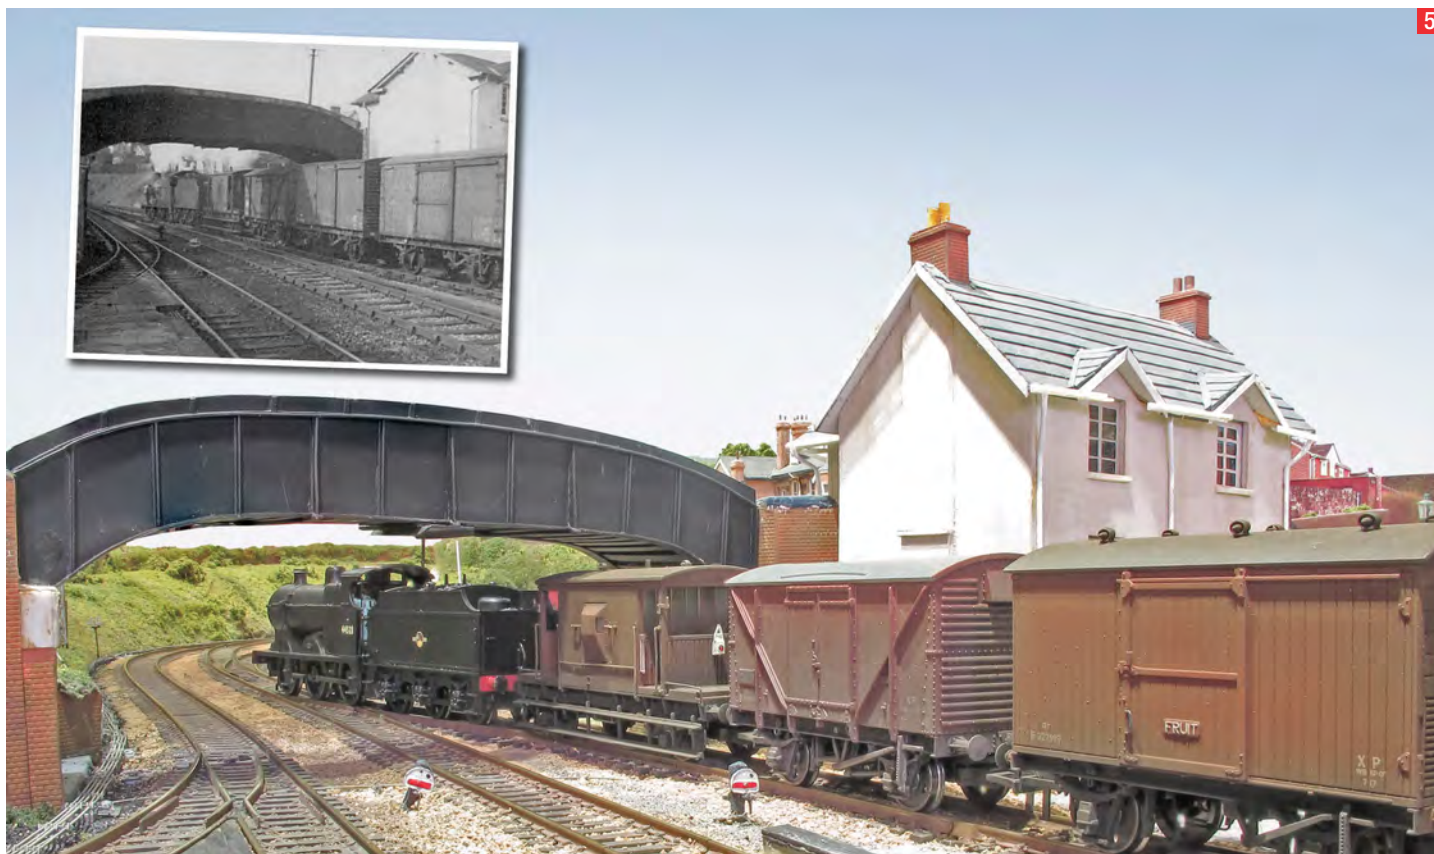

usually hauled by BR 9F No. 92220 *Evening Star* or a Bulleid 'West Country' such as Nos. 34107 *Blandford Forum*, 34043 *Combe Martin* or 34042 *Dorchester*. The Bailey Gate to Templecombe milk train can be seen, as can the 'Templecombe Goods' carrying agricultural equipment and produce and many mixed goods trains for the yard at Blandford. These feature vans containing feed and fertiliser, domestic coal and general merchandise for the goods shed.

The following classes are represented using ready-to-run locomotives; BR Standard 9F 2-10-0, 5MT 4-6-0, 4MT 4-6-0, 2-6-0 and 4MT 2-6-4T, 'West Country' 4-6-2s, ex-LMS 'Black Five' 4-6-0, Stanier 8F 2-8-0, Ivatt 2MT 2-6-2T, S&D 7F 2-8-0, 3F 0-6-0T, 4F 0-6-0, ex-LSWR T9 4-4-0 and ex-GWR 0-6-0PT.

The generous loan of locomotives and stock by club members and donations from members of the public have been invaluable in running a wide selection of realistic S&D trains.

COMMUNITY SUPPORT

As anyone who sees the model would attest it would not have been practical to start construction in situ. The baseboards were constructed away from the museum at

ask the expert

Q How were the various buildings modelled, considering that over the last 50 years many will have been demolished or altered?

A Creating the buildings has been one of the most time-consuming elements of the project with over 2,000 man hours consumed on this part through 2008 and 2009 during regular Wednesday workshops at the museum. Many of the railway buildings and surrounding structures have been modelled which makes the scene readily recognisable. Very few plans were available but accurate representations have been achieved through photographic referencing and scaling by counting brick courses.

Few buildings still exist; Alexandra Street footbridge (see the photograph of the 4F above) is still there with just a view of the footpath which runs along the trackbed through the site of the station. The Stationmaster's house

survives on Alexandra Street and the base of the water tank, the loading bank in the goods yard and the horse loading platform can still be traced.

Aged blue engineering bricks can still be seen either side of the Wimborne Road. These once held the arches shown at the right-hand end of the layout. Card mock-ups were created as placeholders for the well-made buildings we are now able to see on the model. All of the buildings bar one, a greenhouse, are scratchbuilt.

Significant amounts of detailing in addition to the construction have taken time to complete, but bring the model to life. They complete a project which shows museum visitors what life was like before the railway closed better than any photographs or maps could ever do.

a member's house, including tracklaying and electrical installation, and then taken to the museum and set up. The boards are 9mm ply sitting atop 2in by 1in 'L' girder support work, which ensures durability and rigidity.

The storage roads to the rear of the circuit are permanently fixed in place, but the front three scenic boards are removable from the display to enable the layout to be taken, with a separate storage yard, to exhibitions. In exhibition guise, as at Warley National Show in 2014, the layout includes an additional 4ft long section showing the bridge and flood arches over the River Stour. Scenic topography is accomplished through the use of expanding foam carved to shape.

Underlining the community approach, the group has gone from strength-to-strength attracting many new members whose help has been invaluable and who have enjoyed learning new skills and applying them.

ABOVE: Western Region influences were becoming more evident by the early-1960s, most notably in the locomotives being used, in this case a 9F on the 'Pines' and an '8750' 0-6-0PT on a local passenger duty.

ABOVE LEFT: A Fowler 4F 0-6-0 edges out of the goods yard and under Alexandra Street footbridge with a train of vans.

The group was recognised by the Community Service Volunteers' national 'Make a Difference' day in 2013 winning the Volunteer Group of the Year title. Group leader David Cash also won 'Volunteer of the Year'. Now knowing David and his infectious enthusiasm, encouraging words and in-depth knowledge of the area and the railway, I can fully understand why. David would like to acknowledge the support of all fellow club members who have made the project possible.

The group is now moving onwards with the formation of the New Blandford Railway Club as membership has grown and is now secure with its usage of the town's Scout Hall premises. The club's forthcoming project, 'Bailey Gate', again centres on the erstwhile Somerset & Dorset. See www.newblandfordrailwayclub.co.uk for more information. The Somerset & Dorset Railway Trust has also arranged several events taking place through 2016 in various locations relevant to the railway, more details can be found at www.bit.ly/1mlgaU6

Finally, **BRM** would like to acknowledge Paul Blanchard, Tim Chapman, Joe Robbins, Joe Evans and The Somerset & Dorset Trust for their assistance in compiling this article. ■

PART TWO

A WAGON IN EVERY SCALE

Phil Parker continues his quest to build a wagon kit in every common UK modelling scale as he assembles an LNER 13t 'High' in 3mm scale.

SHOPPING LIST

KIT

I 3mm Scale Society
LNER/BR 13 ton Steel

primer

TOOLS

I Modelling knife
I Abrasive sticks
I Needle files (flat & round)
or cutting broaches
I Superglue
I Plastic cement & solvent

Take a look at any mainstream UK manufacturer's catalogue and it would be tempting to assume that 3mm scale, or TT as it's often described, is a dead scale.

Although it remained popular in East Germany, Tri-ang abandoned manufacturing RTR models in the scale during the mid-1960s. Instead of marking the end of the scale, it prompted the creation of the 3mm Scale Society.

The Society has brought together modellers who can see the benefits of a scale that fits in size between OO and N and it has commissioned kits from manufacturers including, in this case, Parkside Dundas.

A range of plastic wagon kits has been developed as part of a five-year plan to ensure that a selection

of rolling stock is available for all the 'Big Four' companies and BR. I've built a few of these and generally they're assembled the same way as their 4mm scale equivalents - in some cases better, as the tooling is more modern.

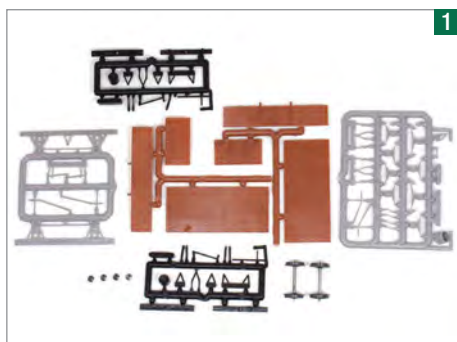

I've chosen the Societies' kit for an LNER/BR 13 ton steel open wagon, with three different types of brake gear - Morton unfitted, RCH fitted and LNER fitted. You'll need to decide what you're making and pay attention as some moulded parts have to be removed and others substituted. With eight shoes and extra linkages, I've plumped for the LNER fitted version. ■

I gadget spot

To fit bearings in the chassis, the holes in the W-irons have to be opened up. For the sake of accuracy, I'm not using drill bits - the chances are they'll wander when working. My method is to use a set of cutting broaches. These are five-sided tools which cut away material when rotated in the same way as a file. Because the cutting takes place equally on all sides of the tool, the centre of the hole shouldn't change.

If you build the Morton brake version of this wagon, construction is no different from a 4mm scale model, the result is just a little smaller.

Although there appear to be many parts for this wagon, some of the sprues are shared with other kits, so not everything you see is needed here.

The solebar tops are cleaned to ensure they're flat. Mould lines are removed by scraping along the line with a knife. Finish up with some fine abrasive papers.

Brass bearings are fitted into each W-iron. Fit one solebar, check for squareness first then leave the glue to fully harden before adding the second.

Check the back-to-back measurements of the wheelsets before fitting. This is easy with the appropriate gauge from the 3mm Scale Society.

Raised sections on the floor assist in locating the solebars the correct distance apart but the brake shoes need a little trimming to clear them afterwards.

I found the cross shaft supplied in the kit was too short - replacement with a bit of Slater's microstrip is easy enough and the corners are rounded off.

The brake lever is cut where the horizontal joins the vertical section, then shortened to around 14mm and glued back together.

Fitting the body to the chassis starts with the ends. These are joined by the sides being careful not to leave finger marks behind from the liquid glue.

No vacuum pipes are supplied so I've bent a couple up from 0.9mm brass wire. If you don't have any to hand, bent paperclips could do the job.

Halfords red primer is a bit too red for bauxite brown, but once the wagon is weathered, the results look pretty good and it's easy to apply.

Why 3mm scale?

If you fancy trying a 'modeller's scale' with no RTR support, then 3mm scale is worth a look. It certainly changes the focus of your hobby as you only build what you need and there's no temptation to acquire the latest locomotive release just because it looks good.

HOW TO...

CREATE A FROSTY SCENE

Howard Smith modifies a diorama to capture the essence of a cold winter frost using a minimum of modelling products.

RIGHT: How far can you take an effect? 'Kinmundy' featured in January 2014

BRM depicts a heavy Scottish frost. The owner used white paint, but there are now other ways to create a frost effect.

Look at most layouts and the scenery tends to depict the height of summer. All the trees are verdant with foliage and the sky is blue - very chocolate box like. It's nice to look at, but for most of the year, winter particularly; nature can be quite bleak.

To prove that scenic modelling can still look attractive without reflecting the months of July and August, I'm making a small diorama using some scenic products that you might overlook - none of which involve snow. Frost is common at this time of year, but

getting an accurate sparkle and the illusion of frozen water isn't easy.

Frost acts like a semi-transparent mask, still showing the different shades and tones beneath it. I think it makes a scene reflect the cold season as well as snow, but with more interest and detail. ■

I'm starting with this small depiction of a set of 'stops'. The evergreen gorse foliage is autumnal in appearance. If you have trees, remember they shouldn't be in full leaf.

Before adding anything to the diorama, I'm securing the old scenery with Deluxe Materials' Scenic spray glue. Its spray pattern is very fine, just hold the bottle 30cm away.

Icy Sparkles from Deluxe Materials creates a frost-like appearance. The two 25g bottles go surprisingly far and their contents are comparable to sugar in appearance.

I'm applying the product from a height onto the damp glue for even coverage. The nozzle is large, so take your time. Paper can be placed underneath to catch debris.

Observe photographs to see where frost accumulates. Shaded areas that have yet to see light are usually frostier - a second more direct coat will see to these.

You can't beat paint when it comes to applying depth of colour. This new white paint from the Com-Art range with a useful twist nozzle is stocked by Airbrushes.com.

Rails and sleepers are significantly whiter than the surrounding natural areas, so I'm carefully dry-brushing white weathering powder from DCCconcepts over them.

For variety, I'm adding another frost-accumulating element. This laser-cut concrete-effect cable trunking (ref: 14313) is made by Noch and sold by Gaugemaster.

Once dusted with Icy Sparkles and white weathering powders, the trunking looks suitably cold for the time of year. Remember to cover the sides.

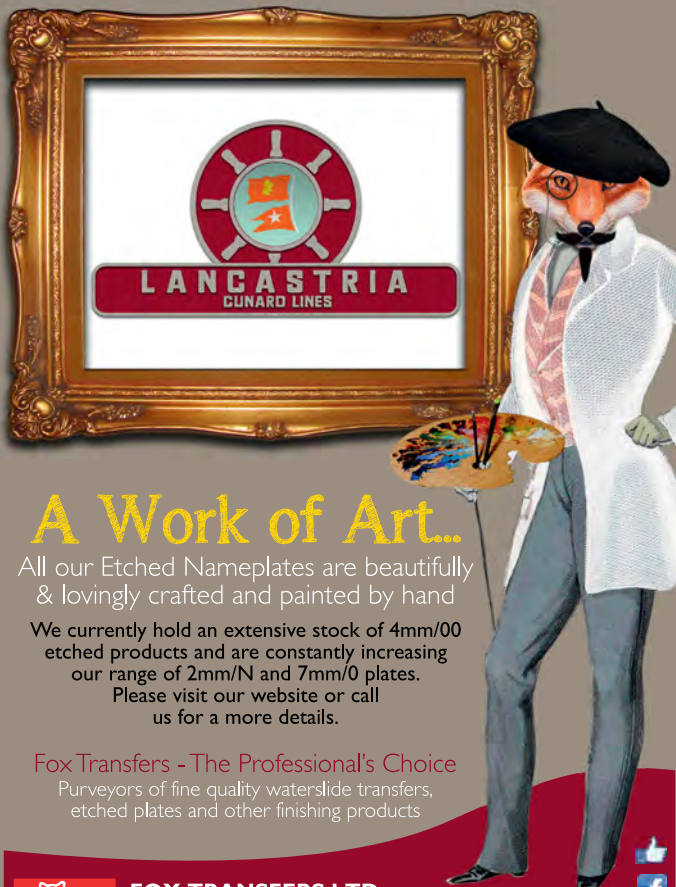

In a few hours, the effect of a cold overnight frost can be achieved with a minimum amount of products and fuss. All it takes is patience and careful observation of photographs. Don't get carried away - too much frost looks like snow. This is easier said than done because Icy Sparkles is so easy to apply.

ask the expert

Q Should I consider anything else before I transform my layout to a frost scene?

A Trees and bushes, unless they're evergreen, shouldn't be in foliage in winter. For most layouts, this could result in significant changes. I've kept mine in place as they look like small evergreen gorse bushes - a common sight around railways. If your layout is looking a little tired and the scenery is past its best, consider refreshing it without the need for scenic scatter. It could inject fresh life into your layout and it'll stand out from the crowd at exhibitions.

A Work of Art..

excluded to ensure poll remained independent.

Bachmann and Graham Farish were the big winners in the 2015 British Model Railway Awards, sweeping the board in N scale and taking the N, OO gauge and overall Manufacturer of the Year prizes.

Other prominent winners included Kernow Model Rail Centre for its Adams 02 0-4-4T, beating Hornby's GWR 'King' 4-6-0 in a closely fought OO gauge Steam Locomotive category and Dapol's O gauge Stroudley 'Terrier', which took almost 80% of the vote in its poll. Heljan won the other three O gauge awards for its impressive Class 60, Mk 1 GUV and Manufacturer of the Year for 7mm scale.

"This really is fantastic news" said KMRC founder Chris Trerise. "The whole team at would like to thank all of our customers for their support and compliments about the Adams 02. This would not have been possible without them. Here's to the next model!"

Top of the OO gauge Diesel & Electric Locomotive poll was Bachmann's Class 43 'Warship' (pictured) with the Heljan Metropolitan Railway Bo-Bo electric close behind, while Bachmann's Hawksworth WR autococh won the OO coaching stock prize and the Hornby LMS horsebox narrowly beat Bachmann's BR 20t grain hopper to top spot in the OO wagon category.

In N scale, the Graham Farish SR 'Merchant Navy', Class 31, WR Hawksworth stock and Midland Railway/LMS brake van took the honours.

Bachmann's Dennis Lovett said; "Bachmann Europe is delighted to once again be named Manufacturer of the Year and to have gained a clean sweep in N scale. We

have also figured well in an even more competitive OO scale market and the awards are just recognition for all the hard work that has been put in by our staff to bring the models to market. Our thanks to everyone who voted for us."

In the four new categories, introduced this year to recognise the country's best model railway exhibitions, websites, retailer customer service and layouts, the winners were Warley National (by some distance), UK Model Shops (by just one vote over Hornby.com), Hatton's Model Railways and Staffordshire Finescale Group's 'Black Country Blues' respectively. Hatton's Managing Director Richard Davies commented; "Thank you to all our customers who have taken time to support us. 2016 marks our 70th anniversary and this is a fantastic way to start another exciting year."

Finally, a special 'Lifetime Achievement' award is being presented to Graham Hubbard, the founder and former Managing Director of Bachmann Europe, who retired in December.

For a full list of how the votes were cast in each category, go to www.rmweb.co.uk

HELJAN ADDS '07' DOCK SHUNTER

In addition to the models announced at the Warley NEC show in November (February **BRM**), Heljan is also working on a OO gauge model of the popular Ruston & Hornsby Class 07 diesel shunter.

Two versions will be produced reflecting 'as-built' condition and later modified locomotives with Southern Region waist height air brake connections. First releases are expected in 2017, with a similar specification to the recent Hunslet Class 05. However, further details, proposed liveries and identities will be announced as the project develops.

One additional version already confirmed is an exclusive limited edition for Hatton's Model Railways depicting 07001 in Harry Needle Railroad Co. orange and white. See www.ehattons.com for more information.

Introduced in 1962, this class of 14 0-6-0 275hp diesel-electrics - originally numbered D2985-98 - was ordered specifically to replace ex-SR 'USA' tanks on trip and shunting duties around Southampton Docks. As rail traffic within the docks declined through the 1960s, the class was reassigned to duties around Eastleigh before withdrawal in 1973-77, some finding further work with a number of industrial users. Several survive in preservation.

W www.heljan.dk

MURPHY CONFIRMS

After a quiet 2015, Murphy Models has announced that development work is underway on its long-awaited OO gauge '121' Class diesel.

CAD drawings were started in December and Murphy's hopes to deliver the first production models in time for Christmas this year. Pre-production samples are expected to be available for examination at the Model Railway Society of Ireland's exhibition in Dublin in October. Original CIÉ grey and final IÉ orange/black will be the first liveries produced, with CIÉ black, 'Supertrain' and Irish Rail (IR) versions to follow in 2017.

The '121s' were the first in a series of General Motors locomotives built for Ireland and were ordered after serious problems were encountered with British-built Metrovick diesels in the late-1950s. Closely based on a North American 'switcher' design, 15 of the 960hp Bo-Bos (B121-135) were built in December 1960/January 1961, paving the way for the '141/181', '071' and '201' classes introduced over the next 35 years.

Mid-2016 will see revised and updated editions of MM's 'Supertrain' Mk 2 coaches released, along with a 'special' one-off item to commemorate the centenary

LEE MARSH 'LIZZIES'

Museum-quality O gauge specialist Lee Marsh Model Co. has received its latest stunning RTR brass locomotive, the LMS/BR 'Princess Royal' 4-6-2. Numerous LMS and BR liveries, names and numbers are available, with authentic detail variations, covering the entire career of the Stanier 'Pacifics'. BR lined blue is already sold out and very few LMS models were left as BRM went to press, although a good selection of BR models is still available. Priced at £2,850.00, the models feature DCC sound, ball bearings and sprung axles, full working inside motion and reversing gear, high-quality coreless motor and many other fine details.

SOUNDTRAXX UK SOUNDS

For the first time in its 25-year history, SoundTraxx will offer digital sound decoders specifically for the UK market. Starting at just over £50, 'Econami' is a feature-packed budget decoder available in four formats to suit a variety of steam and diesel locomotives. 'Econami' provides high-quality 16-bit sound, lighting effects, and Hyperdrive2 advanced motor control. Features also include 28-function support and Flex-Map technology, an easier method for assigning any function to any function key.

The Econami line includes SoundTraxx's smallest sound decoder, the ECO-100, measuring just 27mm x 10.5mm x 5mm, as well as the ECO-200 2Amp and ECO-400 4Amp versions. ECO-21P is also an option for any model with an NEM-supported 21-pin socket.

New versions designed specifically for the UK market include sounds for British Rail, GWR, LMS, LNER and SR locomotives, multiple exhaust chuff selections (for 2- or 3-cylinders), 16 different whistles, cylinder cocks, blowdown, blowers, water stop, brake squeal/release, and more. The diesel version includes engine selections for Class 20, Class 31, Class 37, Class 47, and EMD 710 UK (Class 66), nine horns, air compressors, engine startup, shutdown and exhaust, Spirax valve, brake squeal/release and more.

● For more information, see the website or contact your local Soundtraxx stockist.

BIOMASS HOPPERS

Hornby has produced a run of 2,000 biomass hoppers for electricity generating company Drax. Available now via Hatton's Model Railways, these enormous 102t capacity covered hopper wagons are used to transport imported biomass material from UK ports to the Yorkshire power station. Two liveries have been produced - 'Swoosh' and 'Powering Tomorrow', reflecting the mix of wagons used on the GBRf-operated services. Priced at £83.00 each, the models were funded by Drax as a promotional tool and further production runs are thought to be unlikely.

SOUTHWARK MRC COURSES

Southwark Model Railway Club is planning to hold a series of training sessions aimed at helping relative beginners and more experienced modellers who would like to develop their skills. The weekly sessions will commence on February 18 at SMRC's clubrooms at St Phillip & St Mark's Church Hall, Avondale Square, off Old Kent Road, Bermondsey, SE1 5PD. Each two hour session costs £5.00 and subjects will include planning, designing and building a layout, landscape forming, scenics, structures and kit-building.

● For full details of public transport access and to register, telephone 020 7732 9675 or go to the website.

W www.southwarkmrc.wordpress.com

HATTONS ICI HOPPERS

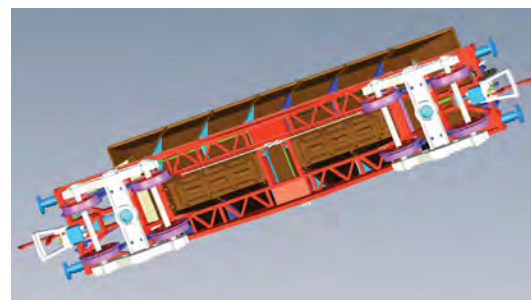

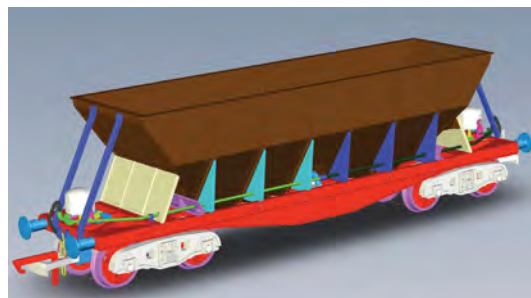

FIRST LOOK Hatton's Model Railways is currently reviewing the initial CAD artwork for its forthcoming ICI limestone hoppers.

These OO gauge models are being developed by Oxford Rail for the Liverpool retailer. According to Research & Development Manager Dave Mylett, progress so far is "very good."

"They measure up well against the drawings we have and although a few things need adding or changing, most things are correct."

The artwork shown depicts a later version with roller bearings and plate frame bogies but Hatton's intends to ensure this version is correct before it moves on to the models with earlier pad bearings and diamond frame bogies.

W www.ehattons.com

FARISH 'CASTLES'

FIRST LOOK Graham Farish has received the first pre-production samples of its all-new GWR 'Castle' 4-6-0 due for release later this year. The unpainted engineering prototypes depict all three versions, which will carry GWR, BR early and BR late crest lined green as No. 5044 *Earl of Dunraven*, No. 5041 *Tiverton Castle* and No. 5071 *Sir Daniel Gooch* respectively.

All have single chimneys and Collett tenders (containing a six-pin DCC socket) and a coreless motor

in the locomotive. The 'Castle' will be the first Graham Farish steam locomotive designed with provision for DCC sound in the tender. Expected RRP is £139.95 each.

PRICE

RRP £184.95

WORDS

Ben Jones

PHOTOGRAPHS

Tony Wright

For its second OO gauge steam locomotive Heljan has tackled an LNER heavy goods class with a long and complex history. **Ben Jones** consults the archives to see if the Danish firm has captured the many detail variations.

Having contented itself with diesel and electric subjects for more than a decade, Heljan is now tentatively moving into OO gauge steam locomotives. After the LMS Beyer-Garratt for Hatton's released in 2014,

it is now shipping its first steam-era locomotive for general release - the long-awaited Gresley O2 2-8-0. These heavy mineral locomotives had a long career and many modifications over the years, as you'll discover from Tony Wright's article on page 60. Here, we'll stick to the model and what it delivers in terms of detail options, liveries, features and performance.

Heljan's model is available in eight versions across two sub-classes; the later left-hand drive O2/3s and O2/4s with long-travel valves, high running plate and larger side-window cab.

Reviewed here is No. 63983, an O2/4 in early-1950s condition, rebuilt with an LNER 100A boiler (as used

on the B1 4-6-0s and O4/8 2-8-0 rebuilds, amongst others) - a feature distinguished by the rearward extension of the smokebox. It carries the large version of the early BR emblem on the tender and large Gill Sans cabside numbers. No shedplate has been printed on the smokebox door, but in true LNER fashion it does have the name of its home depot - Grantham - painted on the front bufferbeam. However, according to Hugh Longworth's *BR Steam Locomotives, Complete Allocation History 1948-68*, No. 63983 was not allocated to the Lincolnshire depot between 1948 and withdrawal in July 1963. Instead it had spells at Langwith Junction, Mexborough, Frodingham, Doncaster and, from October 1960 until withdrawal, Retford.

My first impression was that, like the LMS 'Garratt' produced for Hatton's, the base black is shiny and somewhat plasticky compared to the more convincing matt finishes achieved by other suppliers. However, a liberal coat of grime should take the edge off that.

No. 63983's cabside numbers are yellow, rather than the more usual cream, although the shape and size of the Gills Sans numerals is good. The BR emblem is neat and features plenty of shading detail. The last piece of printed detail is an oval worksplate either side of the smokebox, which is legible under a magnifier. A set of etched brass plates would be the finishing touch, adding a little extra relief in the right place. In terms of decoration, this O2 is not in the 'Premier League' - there are similar OO locomotives around with much better finishes for less money.

GRESLEY LOOKS

Turning to the physical shape of the model, our view is that it captures the distinctive character of Nigel Gresley's design very well. The front 'face' has the classic Great Northern/early-LNER look, complete with very fine plastic smokebox door handles, wire handrails and a neatly applied numberplate. The shape of the chimney is compromised by having a separate top; presumably to facilitate alternative versions.

Areas such as the smokebox saddle (rebuilt to support the 100A version on this version), boiler, angled outside steam pipes and raised running plate, which help to define the character of the locomotive,

TOP: Decoration is neat, even to the extent of printing a brass frame around one of the cabside windows. Gills Sans numbers are yellow rather than cream.

ABOVE: Brass worksplate confirms that No. 63983 is one of the 1942-built O2s.

have been extensively researched and well executed. Subtle rivet detail around the smokebox is worthy of close inspection. The side window cab has been neatly modelled too, right down to frame of the glazed window being picked out in a dirty brass colour.

Cab interior and boiler backhead aren't up to the exceptional standards of detail and decoration that we've seen recently from other sources, but pipework is picked out in brass, gauges have white faces and the firebox door apparatus is painted silver.

Numerous other separate plastic parts can be seen across the model, including the safety valves and whistle, ejector pipe along the left hand side of the boiler, sanding equipment, brake shoes and brake rigging beneath the locomotive and tender. Sprung buffers with plastic heads are fitted, with Spencer dual-action buffers at the front and LNER Group Standard type with stepped parallel shanks on the tender. Wire handrails are fitted throughout, although blackened wire would have given a more authentic visual effect.

The fit of all these parts was good on our sample, but be aware that some are fragile and will require careful handling. A number of detail variations have been incorporated into the O2/3 and O2/4 tooling; those we know about so far include different smokebox doors and

tender arrangements appropriate to each period and livery, alternative domes, chimneys and buffer shanks.

The tender is a good rendition of the often-modelled LNER Group Standard (GS) 4,200gal, flush-sided type. Wire handrails, separate vacuum brake pipes and a screw link coupling, vacuum reservoir tank, sprung buffers are fitted.

The rear division plate of the bunker is in the earlier position bisecting the water tank pick-up dome (other versions will have it further forward in the revised position) and the tank filler lid even features some hinge detail - which is relatively unusual. Tender chassis correctly has an asymmetrical wheelbase and features excellent relief on the moulded springing, rivet and axlebox detail.

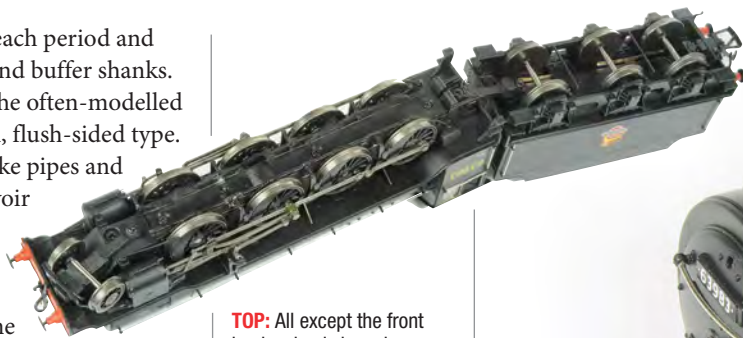

Other models will be paired with the flared-top version of the GS tender and Heljan has stated that future production runs will feature locomotives with the smaller Great Northern (GN) type if there is sufficient demand. It is also hoped that earlier O2/1 and O2/2 locomotives with short-travel valves, lower running plates and GN cabs will be added in due course. It is also planned to offer O2/1s with side-window cabs eventually.

One of the most impressive areas of the model is the finely rendered motion and valve gear. Slender fluted coupling and connecting rods look convincing, as do the piston rods and slidebars. Interestingly, the outside cylinders are cast as part of the alloy chassis block. Behind this, Heljan has also gone to the trouble of including the angled supports for the running plate on each side. The overall effect is excellent.

Plastic wheel centres with metal tyres are used for the locomotive, but the tender has all-metal disc wheels. Personally, I prefer die-cast metal wheels on steam locomotives as they give a superior look, but this also has cost implications.

SOUND READY

Detaching the bodyshell carefully reveals the heavy die-cast chassis block and motor housed inside the boiler. Gears drive to the second driving axle and pick-ups are fitted on all wheels except those of the front bogie. Cleverly, the tender coupling bar doubles up as a bridge carrying current between the locomotive and tender (or *vice versa*) with a small plug/socket at each end.

TOP: All except the front bogie wheels have brass pick-ups.

RIGHT: Detail around the smokebox is neatly executed, although the two-piece chimney is a compromise.

ABOVE: Boiler backhead is more minimalist than some recent efforts in OO, but still has all the required features.

BELOW: Space inside the tender tank, has been utilised for a 21-pin DCC decoder and large speaker housing.

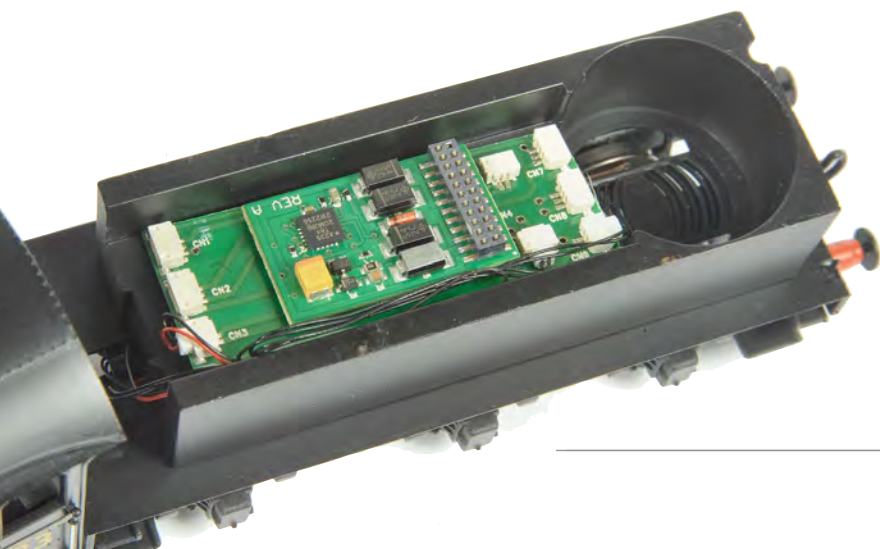

All models have a 21-pin DCC decoder socket in the tender, NEM pockets for the supplied tension lock couplers or your own choice of compatible coupling. Provision for the installation of DCC sound has also been made and there are slots in the base of the tender tank to allow the sound to escape from the speaker.

An illustrated instruction sheet is provided, explaining how to remove the body for maintenance and DCC conversion, plus further information about the prototype and model.

Our sample displayed the usual Heljan virtues of smooth, quiet and powerful performance with consistent, reliable operation over complex pointwork, gradients up to 1-in-30 and Code 75 track. It ran equally well on DC analogue and DCC, proving itself to be capable of hauling a 60-wagon train on level track (see the BRM digital edition and next issue's DVD for a clip of it in action). In these tests the O2 proved itself to be more powerful than the Bachmann O4 and WD 2-8-0s and Hornby's O1 but not quite the equal of a Bachmann 9F 2-10-0.

It's good to see Heljan venturing into the production of British steam locomotives and a model of this significant LNER heavy goods class is long overdue. In terms of capturing the look and detail variations of the 'Tangos', there's plenty to please the legions of Gresley devotees out there. But, despite the model's numerous good points, it's a reserved welcome from this reviewer.

An RRP of £184.95 reflects the many detail variations that have had to be worked into the tooling, with development costs having to be recouped over relatively small production runs of each sub-class. However, the price is £30-£40 higher than recent 2-8-0 goods locomotives of this size and specification from other suppliers, such as Bachmann's O4/ROD and Hornby's O1, which generally offer superior fit and finish. ■

POPPY'S WOODTECH CHASSIS JIG

1

The laser-cut jig comes in kit form and is simplicity itself to put together, such is the accuracy of the cutting. Instructions are simple to follow and it even comes with rubber feet to prevent it moving around on the workbench in use.

REVIEW Tony Wright

There have been many jigs produced over the years enabling locomotive builders to get frames straight and true. Some have been very simple, consisting of no more than turned aluminium spacers and lengths of one-eighth studding to pass through the bearings and spacers, clamped together with one-eighth nuts (Jamieson/Comet). Others have been far more sophisticated, costing well into three figures.

This latest laser-cut jig from Poppy's Woodtech seems to me to be a perfect combination of both types. It offers the low cost of the simplest products with the sophistication of the more expensive types. Its use is best illustrated by the step-by-step images alongside.

Where the jig really comes into its own is for assembling a set of frames where there are no slots and tabs, nor turned spacers; as shown with the OO Comet B1 here. I first soldered the bearings in, soldered the spacers to one frame then jiggged everything up as shown ready to solder the other frame on. The larger rubber washers held the one-eighth rods and the smaller rubber washers held the coupling rods in place. Finger pressure held the frames together for initial tacking (I do have asbestos finger ends!). For those with some feeling in their fingers, pegs or clips of some kind should suffice. When soldered, the frames were removed from the jig, the set of wheels put on and the rods tried for free-running. Everything was square, true-running and entirely accurate.

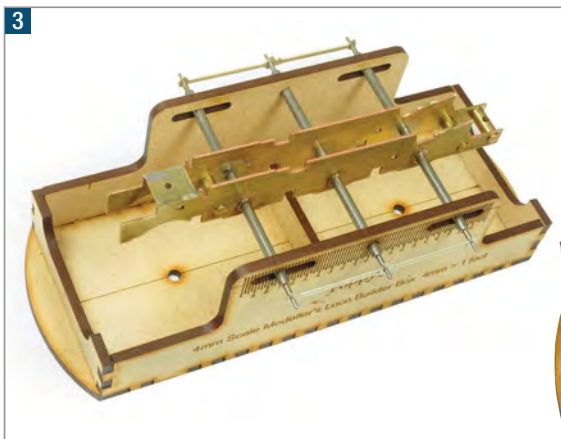

I thoroughly recommend this product. It's suggested that building the locomotive body around the frames set up in the jig can be contemplated, but I'd just use it for erecting chassis. I don't like flux residue and filings getting into my sweet-running mechanisms. And, any mechanisms made using this jig will be sweet. ■

2

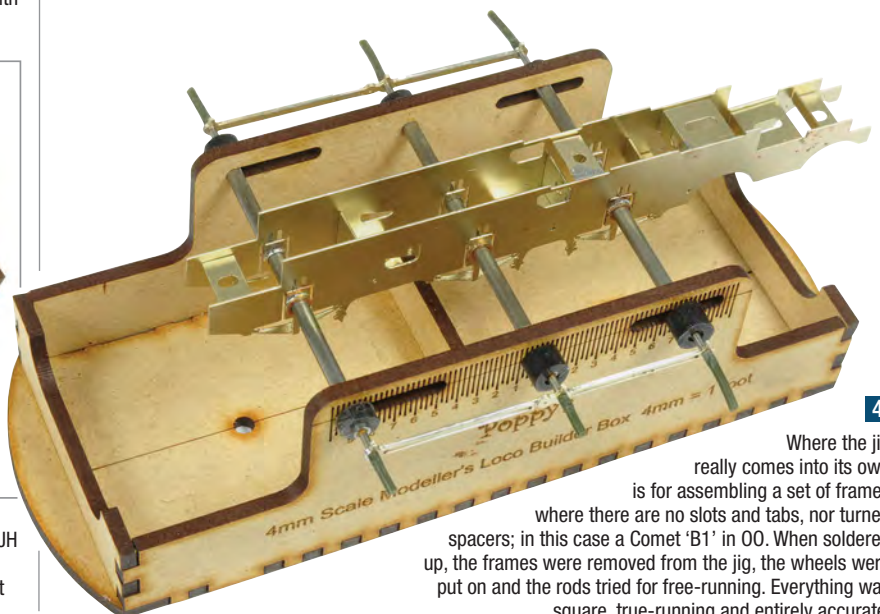

I used PVA wood glue to fix it together, setting it aside on a flat surface to dry. The spacer bar in the middle was used for initial assembly (as described) but I finally glued it in place at the jig's base. The one-eighth rods fit into the slots perfectly.

3

The jig in use to assemble a set of frames, in this case a OO gauge DJH A1. Though this is basically a screw-together chassis, I still found the accuracy of the jig a great help. By employing the coupling rods to set the bearing centres, accuracy was automatic.

4

Where the jig really comes into its own is for assembling a set of frames where there are no slots and tabs, nor turned spacers; in this case a Comet 'B1' in OO. When soldered up, the frames were removed from the jig, the wheels were put on and the rods tried for free-running. Everything was square, true-running and entirely accurate.

GRAHAM FARISH BR 'PIPE' WAGON

FACT FILE

MANUFACTURER Graham Farish by Bachmann
MODEL 377-776 BR (early) bauxite 12t 'Pipe' wagon B741318, 377-777 BR (late) bauxite 'Pipe' wagon B484163
SCALE/GAUGE 1:148 scale, 9mm gauge N
PRICE £17.95 each
AVAILABILITY Graham Farish stockists
REVIEW Ben Jones

Bachmann's model of the standard BR 12t 'Pipe' wagon is now available in N scale, as well as OO. Two of the three liveries produced for the first batch are shown here, depicting early BR bauxite for the 1950s and bauxite with later markings for the 1960s to early-1970s period. The third of the trio carries 1970s/80s engineers olive green, applied to vehicles cascaded to departmental duties after they were no longer required for their intended use.

Based on an LNER design, 300 of these 12ft wheelbase dropside open wagons were built by BR to cater for its once-extensive pipe traffic, primarily from Stanton & Staveley's Ironworks at Ilkeston. Not to be confused with the much longer 'Tube' wagons, they were used both in block trains and individually or in small groups in more general merchandise trains. Some lasted in departmental service into the 1990s.

Like its big sister, the Farish 'Pipe' wagon compares well with published drawings and dimensions. It features excellent planking and metal strapping detail on the body sides, ends and interior. The underframe is excellent too, consisting of numerous separate components to make up the brake gear, finely moulded axle guards and leaf springs.

Metal three-hole disc wheels with pin-point axles are fitted, making the wagons free-running and steady when marshalled into a train. Detachable Rapido type couplers are fitted into NEM pockets at each end. The boxes on the underframe housing the couplers are the most obvious visual deviation from the prototype, but it's difficult to see how that could be avoided on a mass-produced model that has to work with the standard British N coupling system. High level vacuum brake pipes and coupling hooks are provided to complete the models.

Reader Review

Until recently anyone wishing to model parcels traffic in N gauge has had a very limited choice; Mk 1 full brakes were pretty much all that was available, but thankfully this is being remedied with the recent new releases of Mk 1 GUVs and CCTs. But, until now, there nothing mainstream if you wanted a Class 128 diesel parcels unit (DPU).

Thankfully with the advent of 3-D printing and some very skilled designers we can be thankful that many things that we want or need can now be replicated very quickly and at a reasonable cost. This '128' bodysell kit is available from Shapeways in both gangwayed and non-gangwayed variants for £30.30 plus delivery from Shapeways user OnlyMe.

It requires a Dapol Class 121/122 donor chassis,

some 0.3mm wire and depending on which variant you choose, the exhaust pipes. These can be all be purchased separately from DCC Supplies.

The kit itself is a very good representation of the original, although the Dapol chassis is slightly different to that of the real '128s'. I'm sure any 'rivet counters' out there would not be happy but for me at this scale it's a pretty good compromise for such a useful vehicle.

The first thing you notice when you unwrap the bodysell is the amount of detail, but also that the shell needs to be cleaned thoroughly as the 3-D printing process creates layers and these are clearly visible on a model in this scale. I decided at this point that a smooth finish was more important than some of the moulded detail and chose not to worry about the roof vents. I used various grades of fine 'wet and dry' paper to achieve a

Decoration was neat and accurate across both our samples, with white lettering crisply applied and legible both on the body and the underframe. There's a noticeable difference in the shade of BR bauxite used too, with the later colour being somewhat darker.

For BR steam/diesel transition era modellers in N this is another excellent extension of the standard goods wagon fleet. Suitable for use with almost any BR locomotive and many existing Graham Farish wagons, it will provide further variety and interest to fitted goods trains.

SHAPEWAYS CLASS 128 DPU

smooth finish. Carefully working the sides and cab ends can result in a good finish and once undercoated you can easily spot any places which may require a little more work.

Brass 0.3mm wire was bent to shape and fitted for the handrails and new roof vents were added. These were purchased separately - at this point you might regret removing the roof vents as smoothing as fitting around twenty 1mm roof vents can quickly drive you mad! Once a pilot hole has been drilled and the vents cemented in place painting can commence.

A quick test fit to the chassis to ensure everything lines up reveals the only real design compromise; I won't say flaw as you could run the unit without lights, but if you decide to go for domino headcodes then the light unit from the chassis fits into the wrong headcode

box and as they are directional you do get a red glow at the rear. Likewise if roller blind headcodes are used then only one of the two boxes on either side is illuminated. But, it's a small compromise for such a useful model.

After priming, I painted the model in BR blue using thin coats of Phoenix Precision Rail Blue, roof grey and warning panel yellow. Once I was happy with the finish the 'dominoes' were added and filled with Glue-n-Glaze. Windows were also filled using Glue-n-Glaze and then the unit was ready for a test run.

Transfers were supplied from Railtec, bufferbeam details added and weathering completed and the end result is a really good addition to any BR diesel era collection.

Dapol's Class 121/122 unit chassis are excellent slow runners and are easily fitted with a DCC decoder. Modellers who wish to fit sound would find enough space inside the body; removing the seating unit provides enough space to fit a decent sized speaker and sound decoder.

Overall this unit makes an excellent addition to any layout and can carry several liveries from late-1950s BR green era right up through to late-1980s/early-1990s Royal Mail red.

Thanks go to Lee Edmondson of Lee's Loco's for building, painting and weathering this excellent venture into the new world of 3-D printing. ■

REVIEW & PHOTOGRAPHS

Lee Edmondson

As a Rail Exclusive customer, I first became aware of this new model when I received an e-mail from SLW announcing it. This seems to have been the only advertising outlet so far, other than word of mouth and internet forums. The model hasn't, until now, appeared in any of the monthly publications to my knowledge.

So, what does it deliver? A rather nice presentation package, opening to reveal a metal box proudly embossed with 'Rail Exclusive Finescale Model Collection' branding. This contains the model, housed in a perspex display case, presumably for collectors who won't want to run their models. Initial impressions are of a quality product. Included are optional detailing parts and tension lock couplings, along with a few words from Mr Sutton explaining the story behind the production of these models.

I chose the OO sound-fitted version of 24081 in BR blue. SLW offers a selection of liveries covering the BR green and blue periods from original D5000 of 1958 through to withdrawal of the final '24s' in 1980. All can be specified to suit the customer's requirements, with or without a Zimo DCC sound decoder and, for an extra £20 per model, with EM or P4 gauge wheelsets.

A comprehensive instruction sheet details no fewer than 28 controllable DCC functions. Onboard sound has been developed by Paul Chetter and Zimo, and I have to say it is the best RTR British sound locomotive

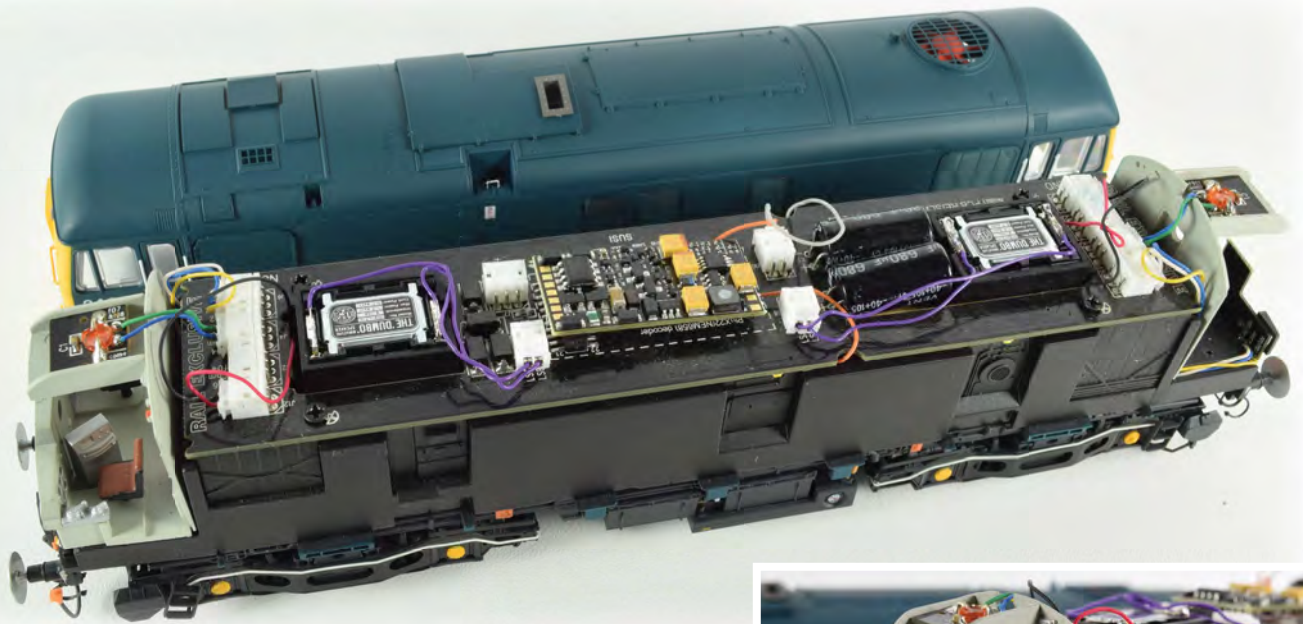

I've heard to date. The pair of SLW-branded speakers sound very good indeed.

As well as a very comprehensive sound feature count, the locomotive is genuinely 'driveable'; the engine responds instantly to any changes from the throttle. It's an immensely realistic and enjoyable experience. Playing with the model allows you to discover even more neat touches, such as the gentle fade of the LED marker lights during initial switch on, or when changing direction.

Moving on to the locomotive's overall appearance; it looks very much to me like a Class 24/0. When compared to the Bachmann model, it is a very different beast. Overall shape is superior; there's a wealth of separately fitted bufferbeam details, bogie pipe runs and underframe detail, all of which are a vast improvement on what has gone before. There are also numerous detail variations across the different models according to livery, period and locomotive. Areas to look out for include cab ends, bogies, axleboxes (standard or Athermos type), fairings along the lower bodyside (complete or removed), underframe equipment and more.

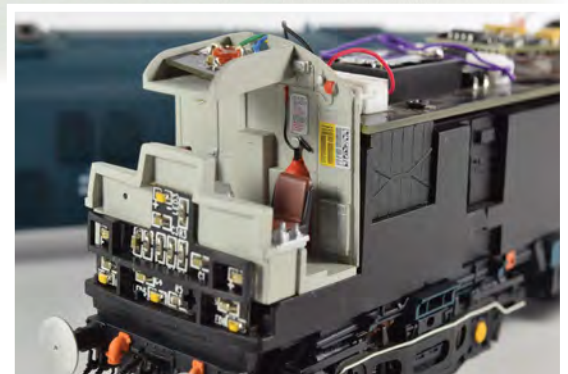

So far, so impressive. The only poorly executed aspects that my eyes were drawn to on closer inspection are the glazing and some fit and finish issues. Considering the bold statements SLW is making about this model, I would have expected completely flush-glazing to the standard of Shawplan's 'Lazerglaze'. However, the supplied glazing suffers from a prismatic effect that detracts from the otherwise impressive design.

TOP: Atop the heavy chassis are a Zimo sound decoder and two speakers.

RIGHT: Decoration extends to the superb cab interior. Note also the extensive LED lighting at the front.

On my sample, the main radiator grilles - the accuracy of which has been the subject of much debate on internet forums - have been applied very slightly askew, as well as the bodyside panels just to the rear of the cab doors.

Printing, paint finish and lettering is very good indeed; the correct shade of BR blue has been used for the locomotive's running period. The size, weight and density of smaller printed details such as the cabside numbers, BR logo and OHLE warning flashes is exemplary. Attention to detail extends to the cab interior which features painted fire extinguishers and warning

notices and a wealth of driver's desk equipment.

My locomotive runs beautifully; it is smooth and assured thanks to the weight of the chassis. All four axles are driven and have pick-ups, plus the model has flywheels to ensure consistent performance.

Overall then, I'm impressed. Aside from a couple of niggly component fit issues I believe the established manufacturers should sit up and take notice of this new venture. Diesel and electric era modellers have consistently asked for greater accuracy, better sound and detailing and here we have a product that delivers it, at a reasonable price.

It's a premium product but at a price not far above that being asked for models with a more limited specification. I look forward to further developments from SLW. ■

MegaPoints Controllers

Awesome layout control system

Includes semaphore bounce - see web for details

MegaPoints Servo Controller features:-

- Control up to 12 points, semaphores or relays!
- Can be used for gates, uncouplers, barriers, doors etc.
- Simple setup – programming buttons on the main board!
- Variable speed control and reversing.
- Built in memories for quick route setup!
- All connections via plugs (supplied), no soldering needed.
- Uses industry standard servos costing as little as £1.50 each!
- Amazing semaphore bounce realism - physics modelled and random, each bounce is subtly different!
- Works with analogue, DCC, steam, any gauge.

Also available:-

DCC Module

- Control a single board or your whole layout.

MultiPanel controller

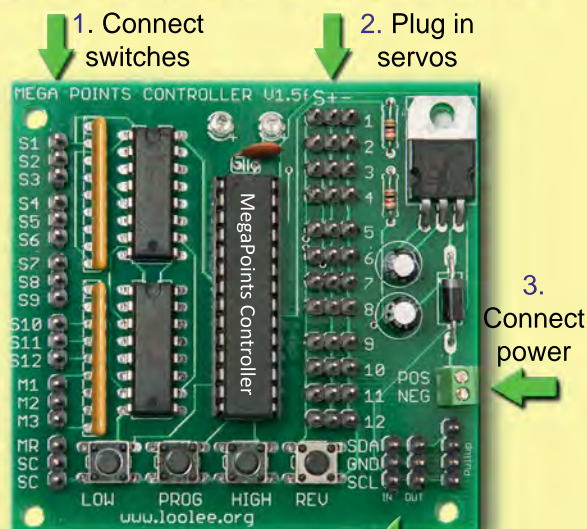

- One cable easy wiring for your mimic panels.

Routing processor

- One touch setup of your entire layout.

No computer required, it becomes part of your layout.

Use your Arduino or Raspberry Pi to control, see web site for code examples and videos

Web: www.loolee.org - British designed and built!

Rev: 15-23

No more track wiring!

True, battery powered wireless control!

Plug-and-go parts that fit into a wide range of 4mm and above locomotives!

- No more pickups!
- No more dirty track to clean!
- Works on existing DC or DCC layouts
- Long running times on a single battery charge

OptiVISOR

The precision binocular magnifier that leaves both hands free

OptiSIGHT™

The OptiSIGHT magnifying visor provides hands-free magnification for more accurate and efficient viewing. The visor tilts up for normal viewing, or down for magnification. OptiSIGHT™ brings work closer into focus, reducing eye strain and fatigue. Available in blue or green, constructed from plastic with optical grade acrylic prismatic lenses.

Supplied with 3 lens plates (1.75x, 2x & 2.5x).

NEW
£29.95

OptiVISOR

A professional quality headband magnifier which has been used by thousands of modellers for the past 30 years. The prismatic glass lenses are ground and polished to precision optical standards, bevel edged and mounted in an interchangeable plastic frame.

Supplied with 1 lens plate of your choice.

TT 300
slow motion
point motor,
DCC & DC
£22.50

- Built-in DCC decoder has the following features:
 - Fully compliant with NMRA Standards and Recommended Practices
 - Automatically switches to non-DCC mode if supplied with DC
 - Multiple addresses can be programmed – allows route setting with groups of TT300s. Up to 48
 - Main address range from 1 to 2944
 - Auxiliary "control" input – allows remote operation, bypassing DCC commands
 - Point addresses, and operating modes, are fully programmable
 - Programmable either from dcc programmer or "in situ" whilst connected on layout
 - All NMRA-recommended programming modes supported.

C&L Finescale Modelling

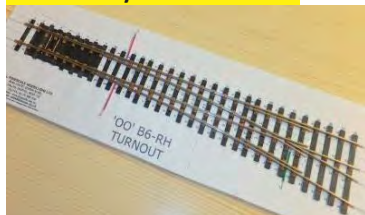

The Track Specialist

All you need to start you off on the right track

C&L Flexi Track, the place to start

Prototypical **Sleeper spacing & length** for great looking track. Now available in **Thin** or **Thick** versions (thin saves on ballast - thick matches Peco for height). **Turnout Kits** include all parts but with no soldering! Glue construction for ease of building! All rail parts come ready made - can be built on a curve if needed

NEW 'Ready to Use' Turnout

PECO Competitive prices We try to match (or beat!) all other online traders on price. Sample **SL100F £63.95**, **PL10 £6**, **SL-E91/2 £9.10**, **SL-300 £60.00**
[See more great prices online](#)

Carr's modelling products include Solder and Fluxes, Chemicals (metal blackening), Ballast, Baseboard Fittings & Coverings, Books and DVD's. **Templates** – a huge range including straight & curved turnouts, slips, diamonds & 3ways. Available in 2mm, OO, EM, P4, O (F7) and S7

Available 'OO' B6 (4' radius)
High quality professional hand built turnout from a detailed and improved C&L kit. Ready to drop into place and use straight away - just connect the wires! More variants to be added shortly.

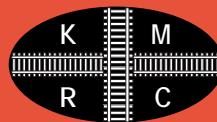

Dapol Singals (N, OO) motorised LMS/GW signals (Home & Distant) Ready to use.

HEATHCOTE ELECTRONICS

detection control effects

The MAS-SEQUENCER controls 2, 3 or 4 aspect LED signals. After passing the signal the train is detected with the MAS-SEQUENCERS built in infra red detection. This causes the signal to change to red. The MAS-SEQUENCERS adjustable timer now starts changing the signal to yellow, (then double yellow for 4 aspect) and back to green.

The diagram shows the simplicity of the wiring. A terminal is also provided for Manual override to red for stations and junctions. Lines with more than one signal use IRDASC-4 units to control the other signals. A single wire from the MAS-SEQUENCER to the IRDASC-4 synchronises the aspects of the signals. Units are compatible with conventional and DCC control.

For working Dapol semaphore signals automatically we have the Semaphore-Sequencer. This detects trains approaching the signal, changes the signal to clear and starts an adjustable timer. At the end of the timing interval the signal returns to danger.

MAS SEQUENCER £16.50 SEMAPHORE SEQUENCER £16.90
p & p £3.80 per order

We stock **CR Signals** in N and OO gauge. These are suitable for the MAS-Sequencer.

Payment by cheque credit/debit card, paypal or postal order.

ADM TURNTABLES - INDEXING DRIVE SYSTEMS

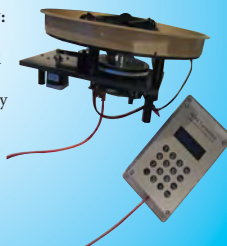

W www.admturntables.co.uk

T 01933 411127

E alastair@admturntables.co.uk

'One of the best quality turntable drive units currently on the market'
BRM Magazine

ADM Indexing Drive Systems for 'N' and 'OO' gauge layouts**:
• Based on a commercially available turntable uniquely having the bridge live through 360 degrees, preventing breaks in sound equipped locos
• Is a quiet running system, driven by a toothed belt; powered by a stepper motor with up to 100 programmable indexing positions which we think makes it the ultimate 'indexing' turntable solution
** drive systems also available for other sized layouts

For more information please take a look at our website
www.admturntables.co.uk

Easy Clip-In DCC Fitted Signals
Control using your regular DCC controller or a PC

True to scale OO gauge signals in multiple designs:

Sets up in seconds
NO programming!
DCC fitted inside,
NO separate decoder!
NO wires - Signal clips into track just like a power clip!

Or remove clips & connect with just 2 wires

3 Easy steps to set up...

1. Slide into the track
2. Touch the 'learn' contacts
3. Press the controller

Prices: £24, £24, £26, £27, £27, £30, £35, £35

Also available for regular DC as a signal kit...From £8
Available now direct from www.dcpexpress.com and model shops

INTRODUCING...

FEATURING LYNCOMBE VALE (OO) | FLORINSTONE (OO) | Highbury Colliery (2FS)

This unique new section gives you the chance to build up a library of trackplans and layout ideas. All of this month's plans were inspired by locations and different aspects the Somerset & Dorset joint railway, which closed in March 1966.

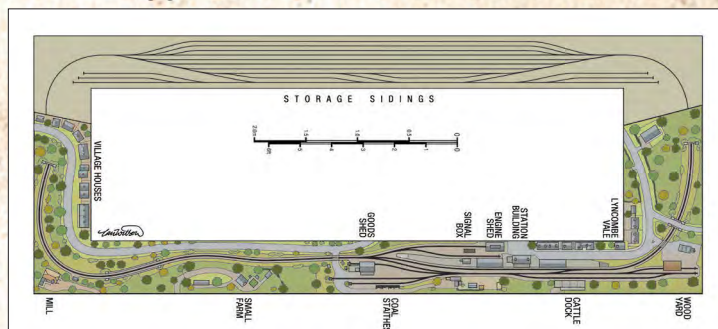

how it works

Every issue of **BRM** now includes at least three trackplans to cut out and keep (or scan/photocopy if you prefer), building into a unique resource for railway modellers. As all the layouts have been built and completed, you can guarantee that they work and fit into the advertised space. We'll bring you model railways of all shapes and sizes, from tiny micro-layouts in boxfiles to giant exhibition layouts, covering all scales, gauges, eras, regions and types of location.

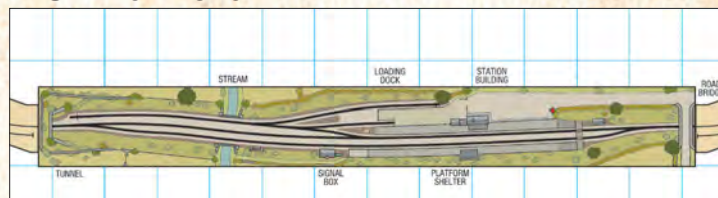

■ cut out & keep...

...or photocopy these pages to build up your own unique trackplan archive.

LARGE LAYOUT | BR SOMERSET & DORSET 1950s | OO Gauge

LYNCOMBE VALE

The S&D's fame has spread as far away as Australia, where **John Pavitt** built this extensive, and oft-extended tribute to the line.

Started in 1995, this large layout has evolved and expanded in several stages. New scenic sections were gradually added, taking it from the original 1.8m by 0.5m to its current 6.5m by 2m. Set on the outskirts of Bath, it features a fictional small S&D station and goods yard, but the extensions have allowed a lengthy section of typical single-track line running through a rolling Somerset landscape. As much of the S&D was single track, this was important to capture some of the unique character of the line prior to closure in 1966.

Peco Code 100 track and Streamline points are used throughout, originally with 18in radius curves but these were gradually eliminated over the course of several rebuilds. Sweeping curves with a minimum radius of 24in are now the norm. Track is laid on 3mm cork sheet.

Control is 12V DC analogue with three 'cabs' for the single main line, goods yard and locomotive changeover area in the fiddleyard. Two panels cover the front, scenic section and fiddleyard with rotary switches allowing each 'cab' to control specific sections as required.

The layout was built by John Pavitt with much assistance from his wife Lyn, friends, family and the Brisbane North group of the British Railway Modellers of Australia.

Despite having never been to England, John went to great lengths to replicate the beautiful scenery of the area between Devonshire and Coombe Down tunnels, near Bath. More than 150 trees were made, along with numerous scratchbuilt or kit-bashed buildings based on those seen in this part of Somerset. Locomotives and rolling stock are also based on those identified from books, photographs and films of the line in the 1950s. See the *BRM 2015 Annual* for more information on the layout and how it was built.

FACT FILE

- SCALE/GAUGE 4mm:1ft scale, 16.5mm gauge OO
- SIZE 6.5m by 2m
- ERA/REGION 1950s, BR S&DJR
- LOCATION Somerset
- CONTROL 12V DC cab control
- LAYOUT TYPE Continuous loop
- PHOTOGRAPHS John Pavitt

✓ PROS

- Captures the character of the S&D with long single line section
- Trains in the landscape
- Designed to be portable for exhibitions
- Extensive fiddleyard

✗ CONS

- Not suitable for average-sized homes
- Requires several operators for full service
- Single track section can limit movements

Set in the rolling landscape between two tunnels and two viaducts on the outskirts of Bath, Lyncombe Vale station is fictional but based on extensive research of the S&D in BR days. The layout evolved and expanded in four stages over the course of several years.

LARGE LAYOUT | BR SOMERSET & DORSET 1950s | 00 Gauge

FLORINSTONE

Andrew Butler couldn't stick to one subject when it came to era and region so he built a 'chameleon' layout that could quickly be transformed to suit his many interests by changing the buildings and signage.

Although we're showing it here as a late-1950s/early-1960s Somerset & Dorset layout called 'Florinstone', this unusual layout can operate in any of six different guises covering subjects as diverse as the West Highland Line in the 1980s (Tulloch Bridge) and an ex-GWR china clay branch in Cornwall (Pengullow). A modular design was adopted, with 13 boards in total, most around one metre in length, which allows them to be carried in a car and trailer to shows. Consisting of a 12ft 6in by 1ft 6in scenic section based around a small station with a passing loop and sidings (a fairly generic layout suited to almost any secondary line), the layout can be quickly changed between its different guises by replacing the buildings and signage, road vehicles and, of course, the trains.

A continuous loop arrangement with large fiddleyard allows plenty of variety in the passing trains. The long passing loop can accommodate express trains of up to nine coaches or 20-25 wagon goods trains.

Peco Code 75 track and points are employed, with simple 'wire in tube' control for the small number of points at the front of the layout. A Lenz LH100 DCC system provides power and control and much of the locomotive and DMU fleet is fitted with DCC sound.

The layout's six guises to date are:

- Florinstone: southern section of the S&D in the late-1950s/early-1960s
- Tulloch Bridge: West Highland Line in the 1980s
- Troutbeck Bridge: Cockermouth, Keswick & Penrith line, BR(M) 1950s
- Ashwater Road: ex-LSWR 'Withered Arm' in North Cornwall
- Pengullow: WR china clay branch in Cornwall, 1950s/60s or 1980s/90s
- Coulderton: Cumbrian Coast line, 2014 onwards

FACT FILE

- SCALE/GAUGE 4mm:1ft scale, 16.5mm gauge OO
- SIZE 20ft by 8ft
- ERA/REGION BR late-1950s/early-1960s
- CONTROL Lenz LH100 DCC
- LAYOUT TYPE Continuous loop with off-scene fiddleyard
- PHOTOGRAPHY Andy York

PROS

- Modular design, easy to transport
- Able to depict several different regions/eras
- Suitable for garage or a large bedroom
- Plenty of operational interest
- Manageable in a realistic timescale.

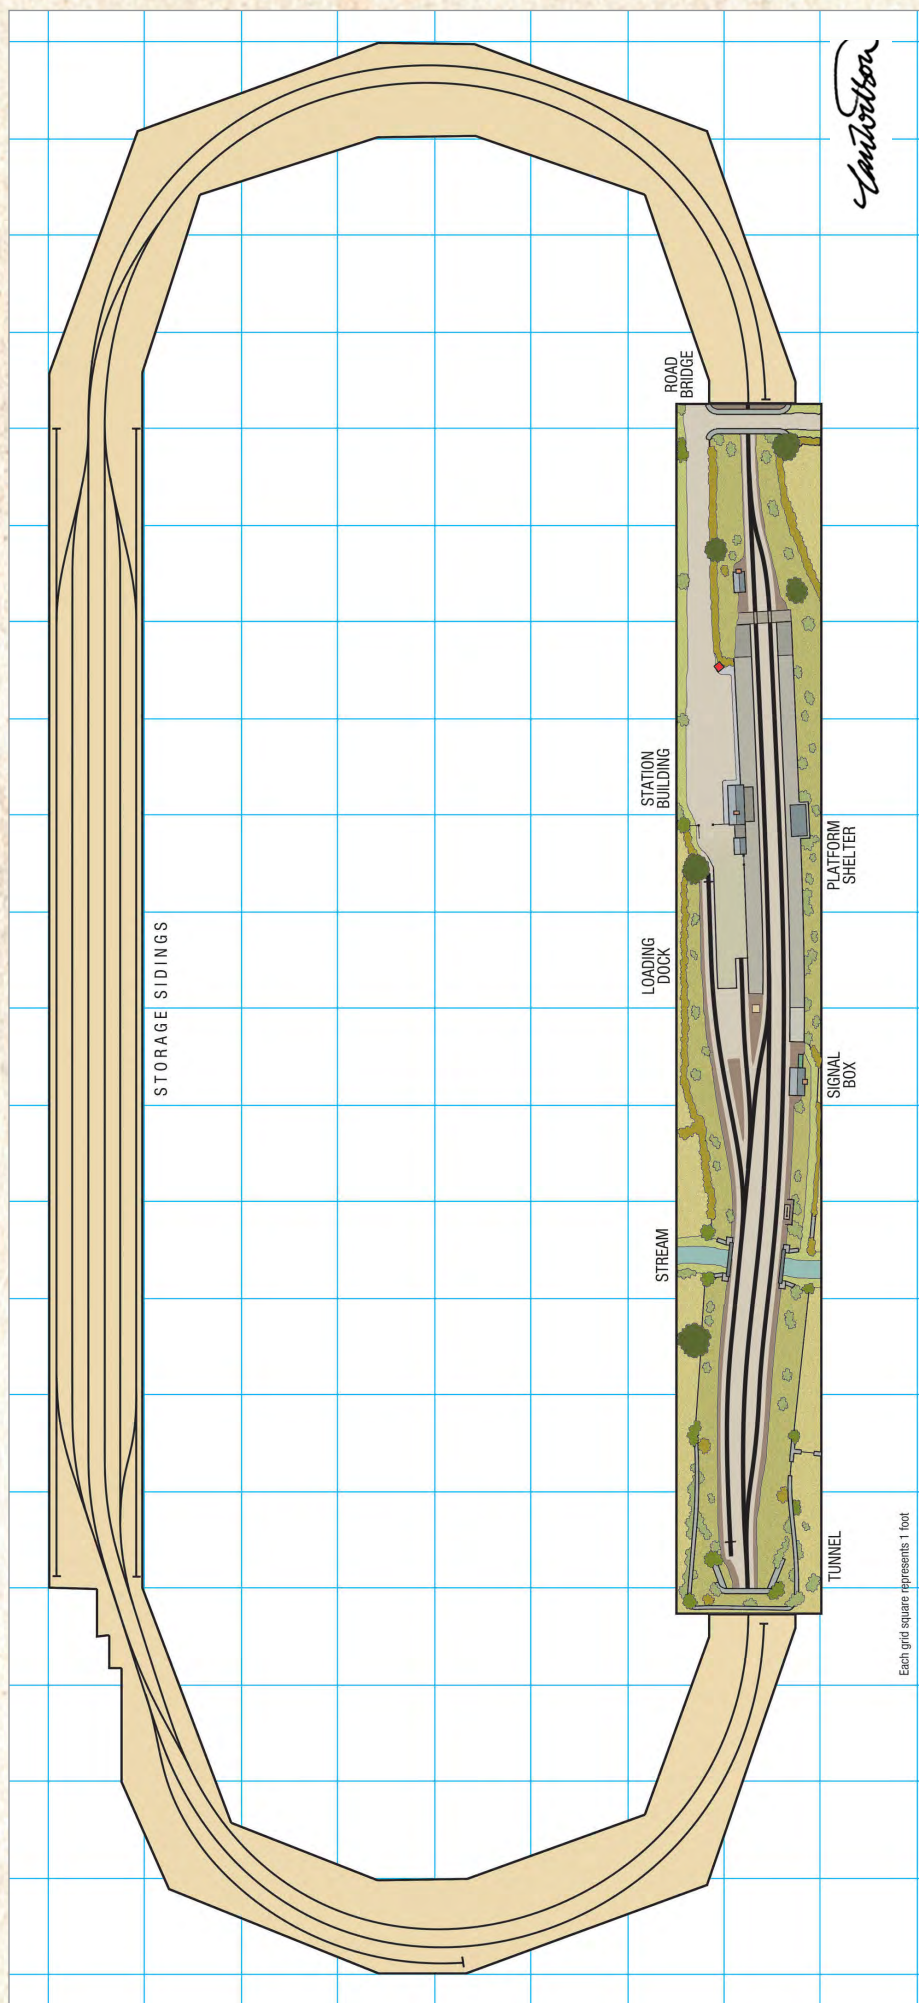

CONS

- Double track main line offers more potential for continuous running
- Possibly not the best option for those seeking absolute prototypical accuracy.

The layout was designed to be of a size that would allow it to be completed in a reasonable timescale, provide plenty of operational entertainment and satisfy a multi-regional interest in railway - and it needed to be easily transported to a new home.

MEDIUM LAYOUT | BR SOMERSET & DORSET EARLY-1960s | OO Gauge

SMALL LAYOUT | S&DJR 1920s or BR 1960s | 2mm Finescale

HIGHBURY COLLIERY

Coal traffic was a major reason for the S&D's line through north Somerset, as depicted on **Jerry Clifford's** superb 2mm Finescale exhibition layout.

Designing a layout is far more than simply coming up with an interesting or prototypical trackplan, it is about creating a three-dimensional picture. Modelling a prototype location is easier when you have a larger space, but when the space available is limited it becomes much more problematic. Creating a pleasing, balanced picture within a compressed space is difficult, even if you find a suitable location, and remaining true to the prototype is doubly so.

What Jerry Clifford did with 'Highbury Colliery' is to take a suitable prototype and rearrange the key elements, adding and subtracting aspects as necessary to create a balanced, aesthetically pleasing whole. Although based on Camerton Colliery on the GWR's Limpley Stoke-Camerton branch in north Somerset, it has been adapted to suit the builder's S&DJR interests and can be operated either in 1920s pre-Grouping SDJR guise, or with BR green diesel-hydraulics as a mid-1960s layout.

A number of visual tricks have been employed to tie the various elements of the layout together and attempt to create a greater feeling of space and depth - not easy when the scenic viewing area is just 4ft 6in long by 18in deep! Starting from the front, the branch climbs from left to right and there's an obvious zig-zag effect from front-to-back as the different running lines and sidings gain height towards the colliery level. The criss-crossing lines lead the viewer's eye from the lower level through to the back where they disappear into undergrowth and the backscene. A 15in high backscene also forces the viewer to focus on the layout, while the frame around the scenic section frames the view and blocks out any distractions behind. Regular through trains passing to and from storage yards at each end and shunting in the colliery yard provide plenty of operational interest in a small space. For more on this superb layout, see the April 2013 edition of **BRM**.

FACT FILE

- SCALE/GAUGE 1:150 scale, 9.42mm gauge 2FS
- SIZE 4ft 6in by 18in (scenic area)
- ERA 1920s SDJR or mid-1960s BR(W)
- LOCATION North Somerset
- CONTROL 12V DC analogue
- LAYOUT TYPE End-to-end

✓ PROS

- ✓ Lots of operational interest in a small area
- ✓ Combines industrial and main line railways
- ✓ Designed to create a feeling of space and depth
- ✓ Can easily be adapted to suit other scales, particularly OO or O.

✗ CONS

- ✗ Yard and siding length is limited, so trains have to be short
- ✗ No continuous running
- ✗ Small, traditional collieries of this type were rare by the 1960s.

Designing a layout is about far more than simply coming up with an interesting or prototypical trackplan, it is about creating a pleasing, balanced three-dimensional picture - that's difficult in a compressed space, even more so if you want to remain true to the prototype.

TAIL LAMP

BRM's 'Industry Insider' considers the reaction to one recent new release and wonders if some modellers should look closer to home for solutions to their running problems.

I might have mentioned this before but in this world there are always people who think they know more than the experts. Our hobby seems to attract more than its share of such people but just recently these self-appointed authorities have added a new twist to their mildly irritating repertoire.

Recently there was a race between a major manufacturer and a relative newcomer to the market when both companies proclaimed their intention to produce the same locomotive. The newcomer, which announced its model months before the established producer, was the first to market. Now, the prototype chosen would have been a daunting choice for the most seasoned producer, but for a company which had never manufactured a locomotive before it must have been a stiff challenge.

But, the price was right, the detail was fine and the running quality was first rate - far beyond anyone's anticipated expectations. Remember that this was the newbie's first model locomotive. Sales proved that what it had produced was exceptional but in our hobby there are some who love to find fault. There is almost a desperation to discover the smallest detail flaws and this model was no exception.

The products hit the market and were eagerly purchased but then someone discovered that as the model reached a particular section of their track it stopped while the driving wheels continued to turn. This phenomenon was filmed and posted on one of the nation's favourite forums - lo and behold it became an instant 'problem'.

Yes, there was a problem here but it could be argued that it was not necessarily entirely the fault of the model. Could the issue lay with the unevenness of the modeller's track rather than with the locomotive?

Before long, others were reporting the same issue; not a huge number, but enough to start a bandwagon amongst others who had not purchased the model but wanted to air their limitless expertise. I would hazard a guess that none had ever come close to investing hundreds

of thousands of pounds in producing a model of their own but all were knee-deep in knowledge of production processes and, of course, they had the answers. The usual mantras soon reverberated around the forums: 'Don't these people check such things?' or 'My [insert example here] model doesn't have the same problem, why does this one?'

Such comments make me wonder if those who make such comments really understand or even think about what they are saying.

My immediate response to such questions would be that firstly, obviously all manufacturers have test tracks and undertake extensive testing before production starts. More than likely those tracks are pinned down on a hard, flat surface and most definitely even and level. Secondly, and I am no engineer, but I guess that much depends on the wheel configuration together with the positioning of the pick-ups as to how a locomotive copes with undulating track.

It seems therefore that some customers are asking manufacturers to take into account poorly laid, uneven and worn-out track when designing new models. This is not entirely unreasonable, but it does beg the question as to what constitutes poor trackwork. How much undulation should a model be able to cope with without derailing or, in this case, bottoming out? Can such a question be answered to everyone's satisfaction?

Of course we all know (don't we?) that there should be a little flexibility in RTR chassis to deal with uneven track but the more forgiving they, the more compromises have to be made in terms of looks and detail. So, have a heart, this manufacturer is not only new to the UK market and I would have been amazed if its first model had been 100% perfect. As it is I think it has done a commendable job. There is nothing terrifically wrong with the model that cannot be easily remedied. Being blunt, we have all seen much worse and from those who have been manufacturing for decades, so let's keep things in perspective. ■
